

Per poter modificare le Gif animate è necessario aver scaricato e installato il plug-in "Imported animated GIF".

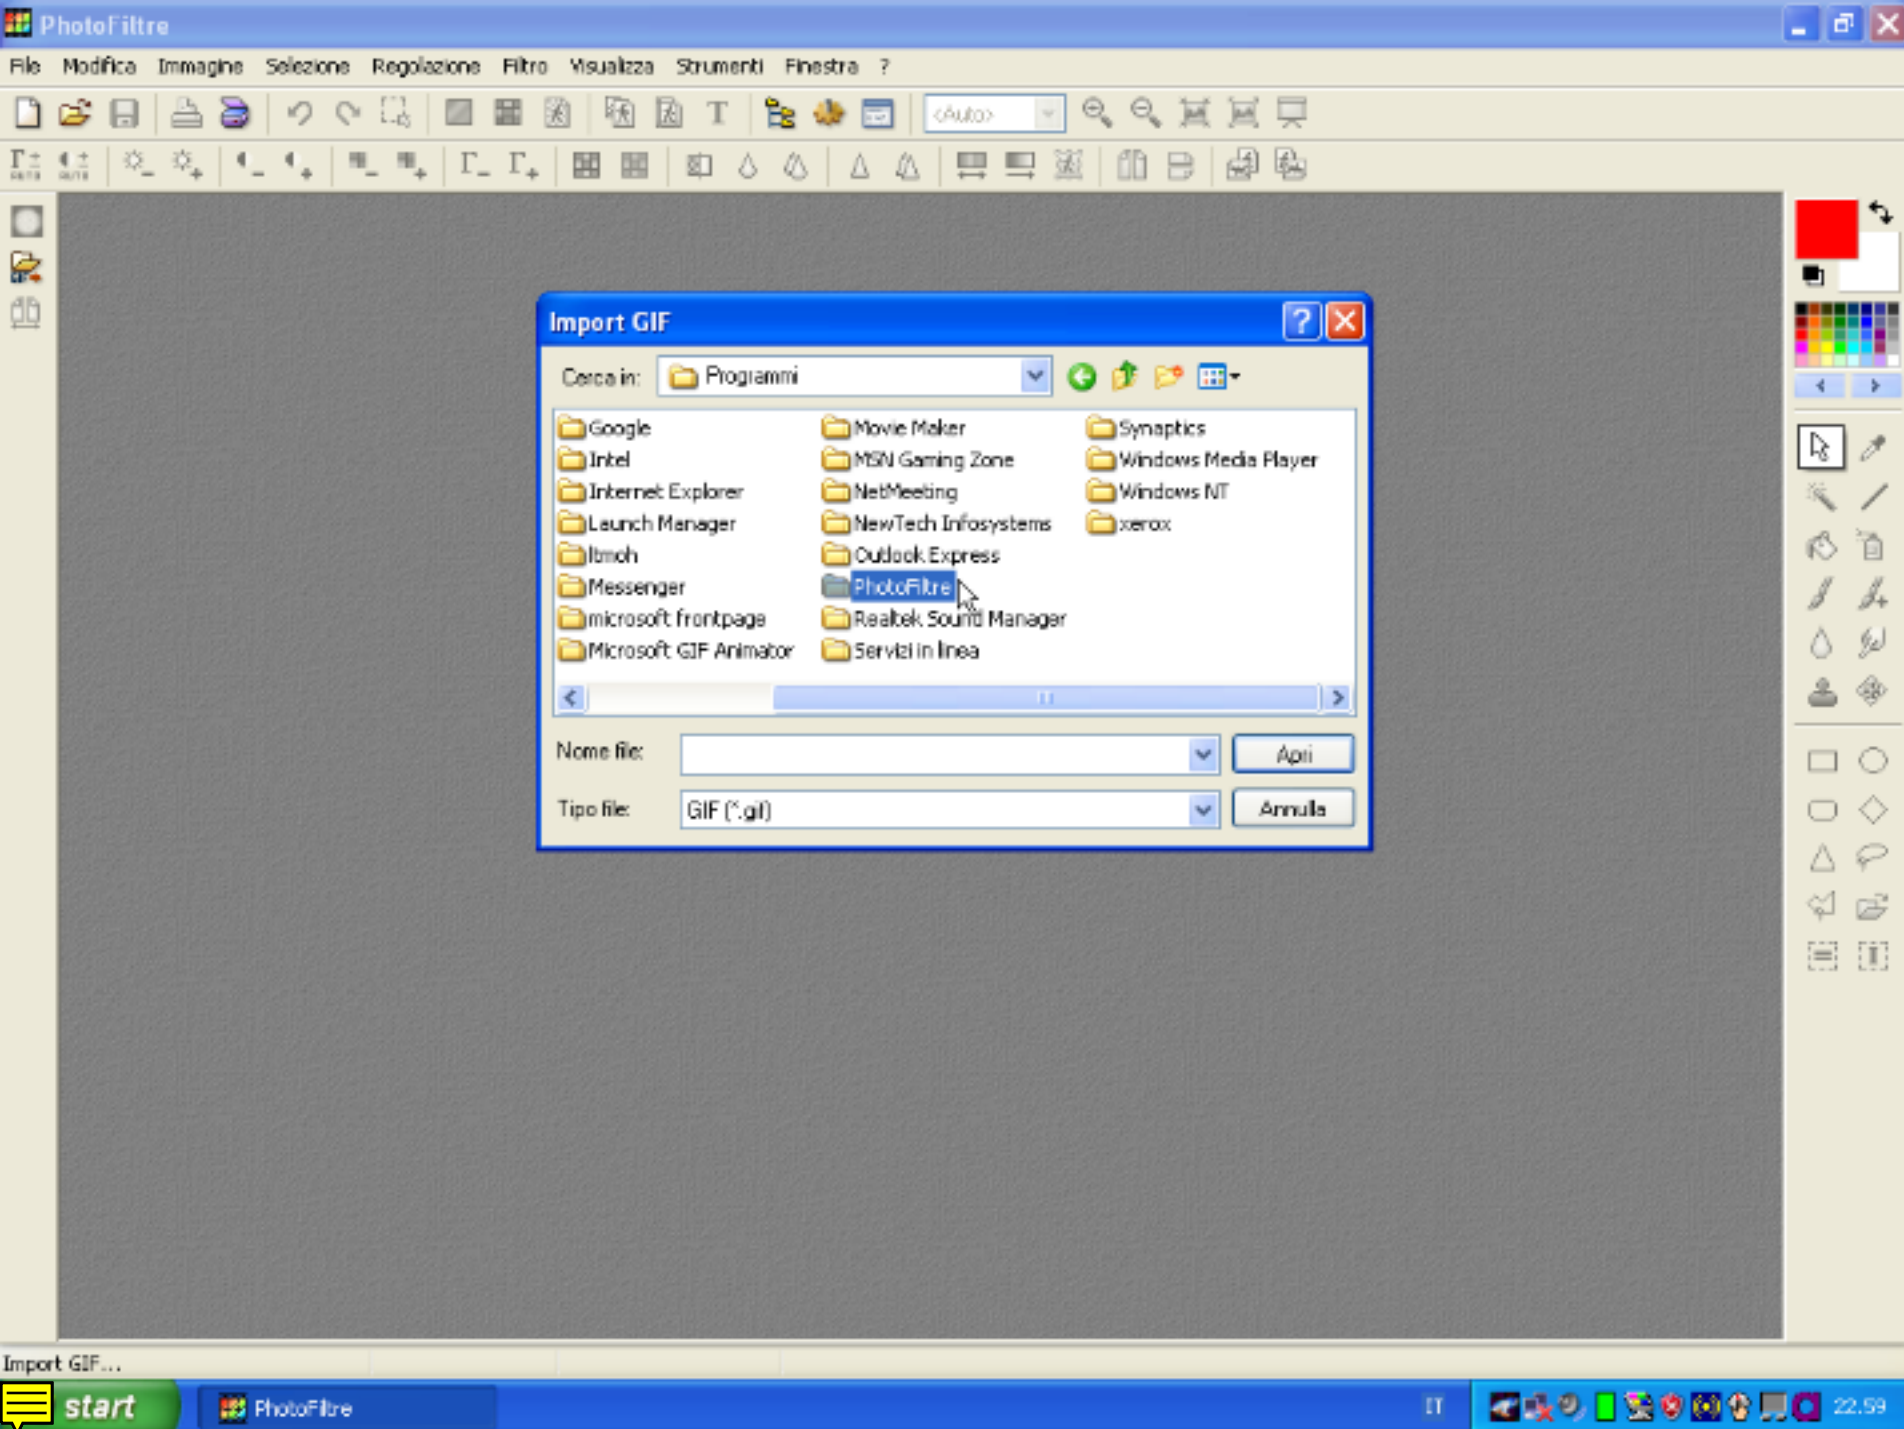

In questo caso il plug-in è stato anche inserito nella relativa barra.

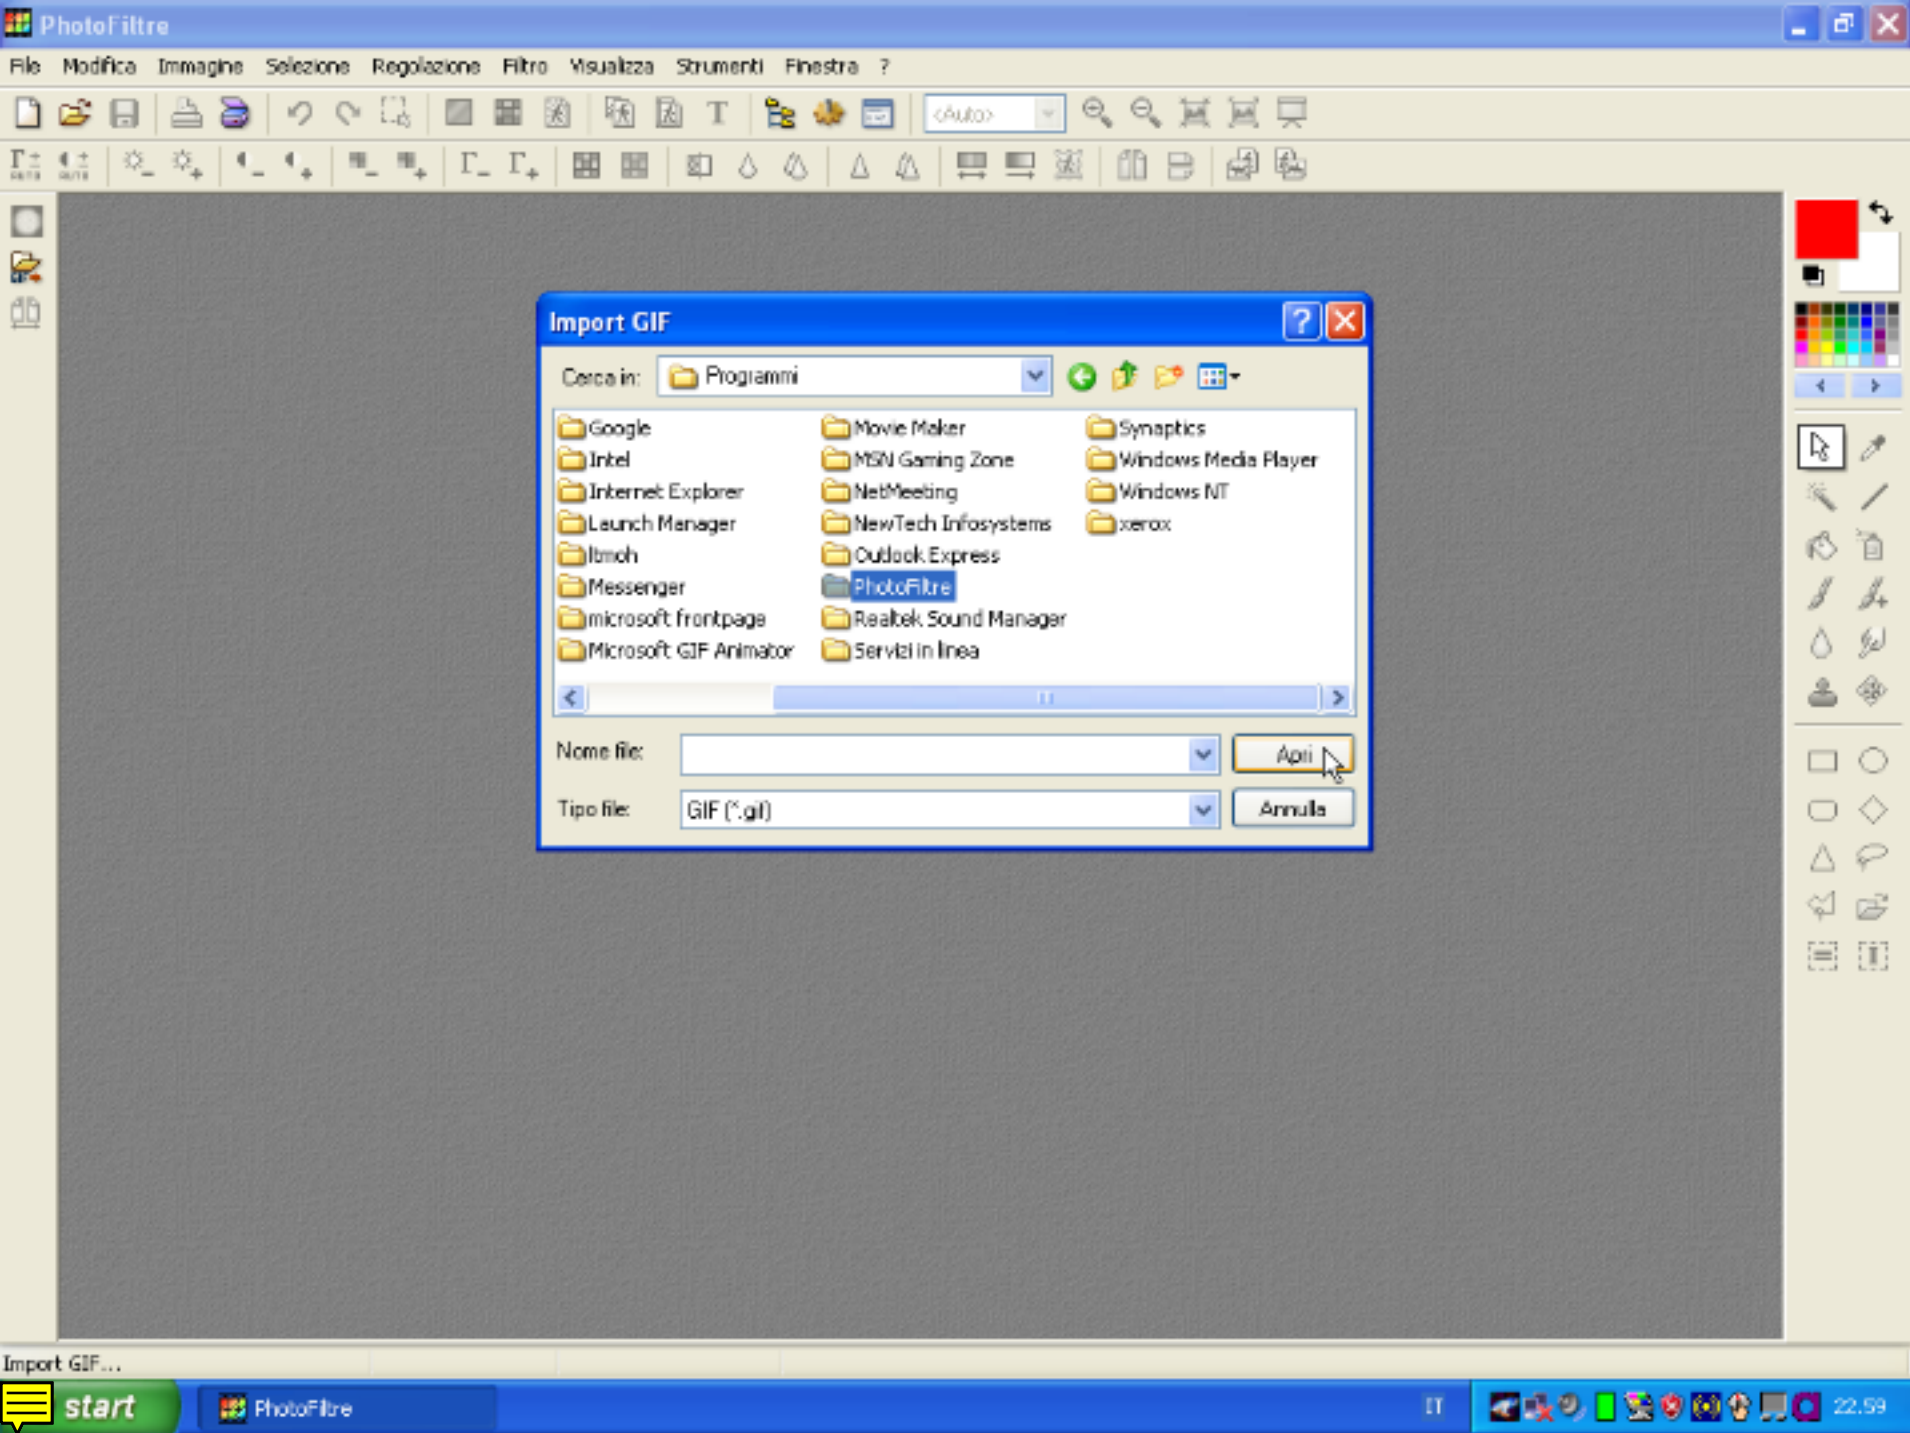

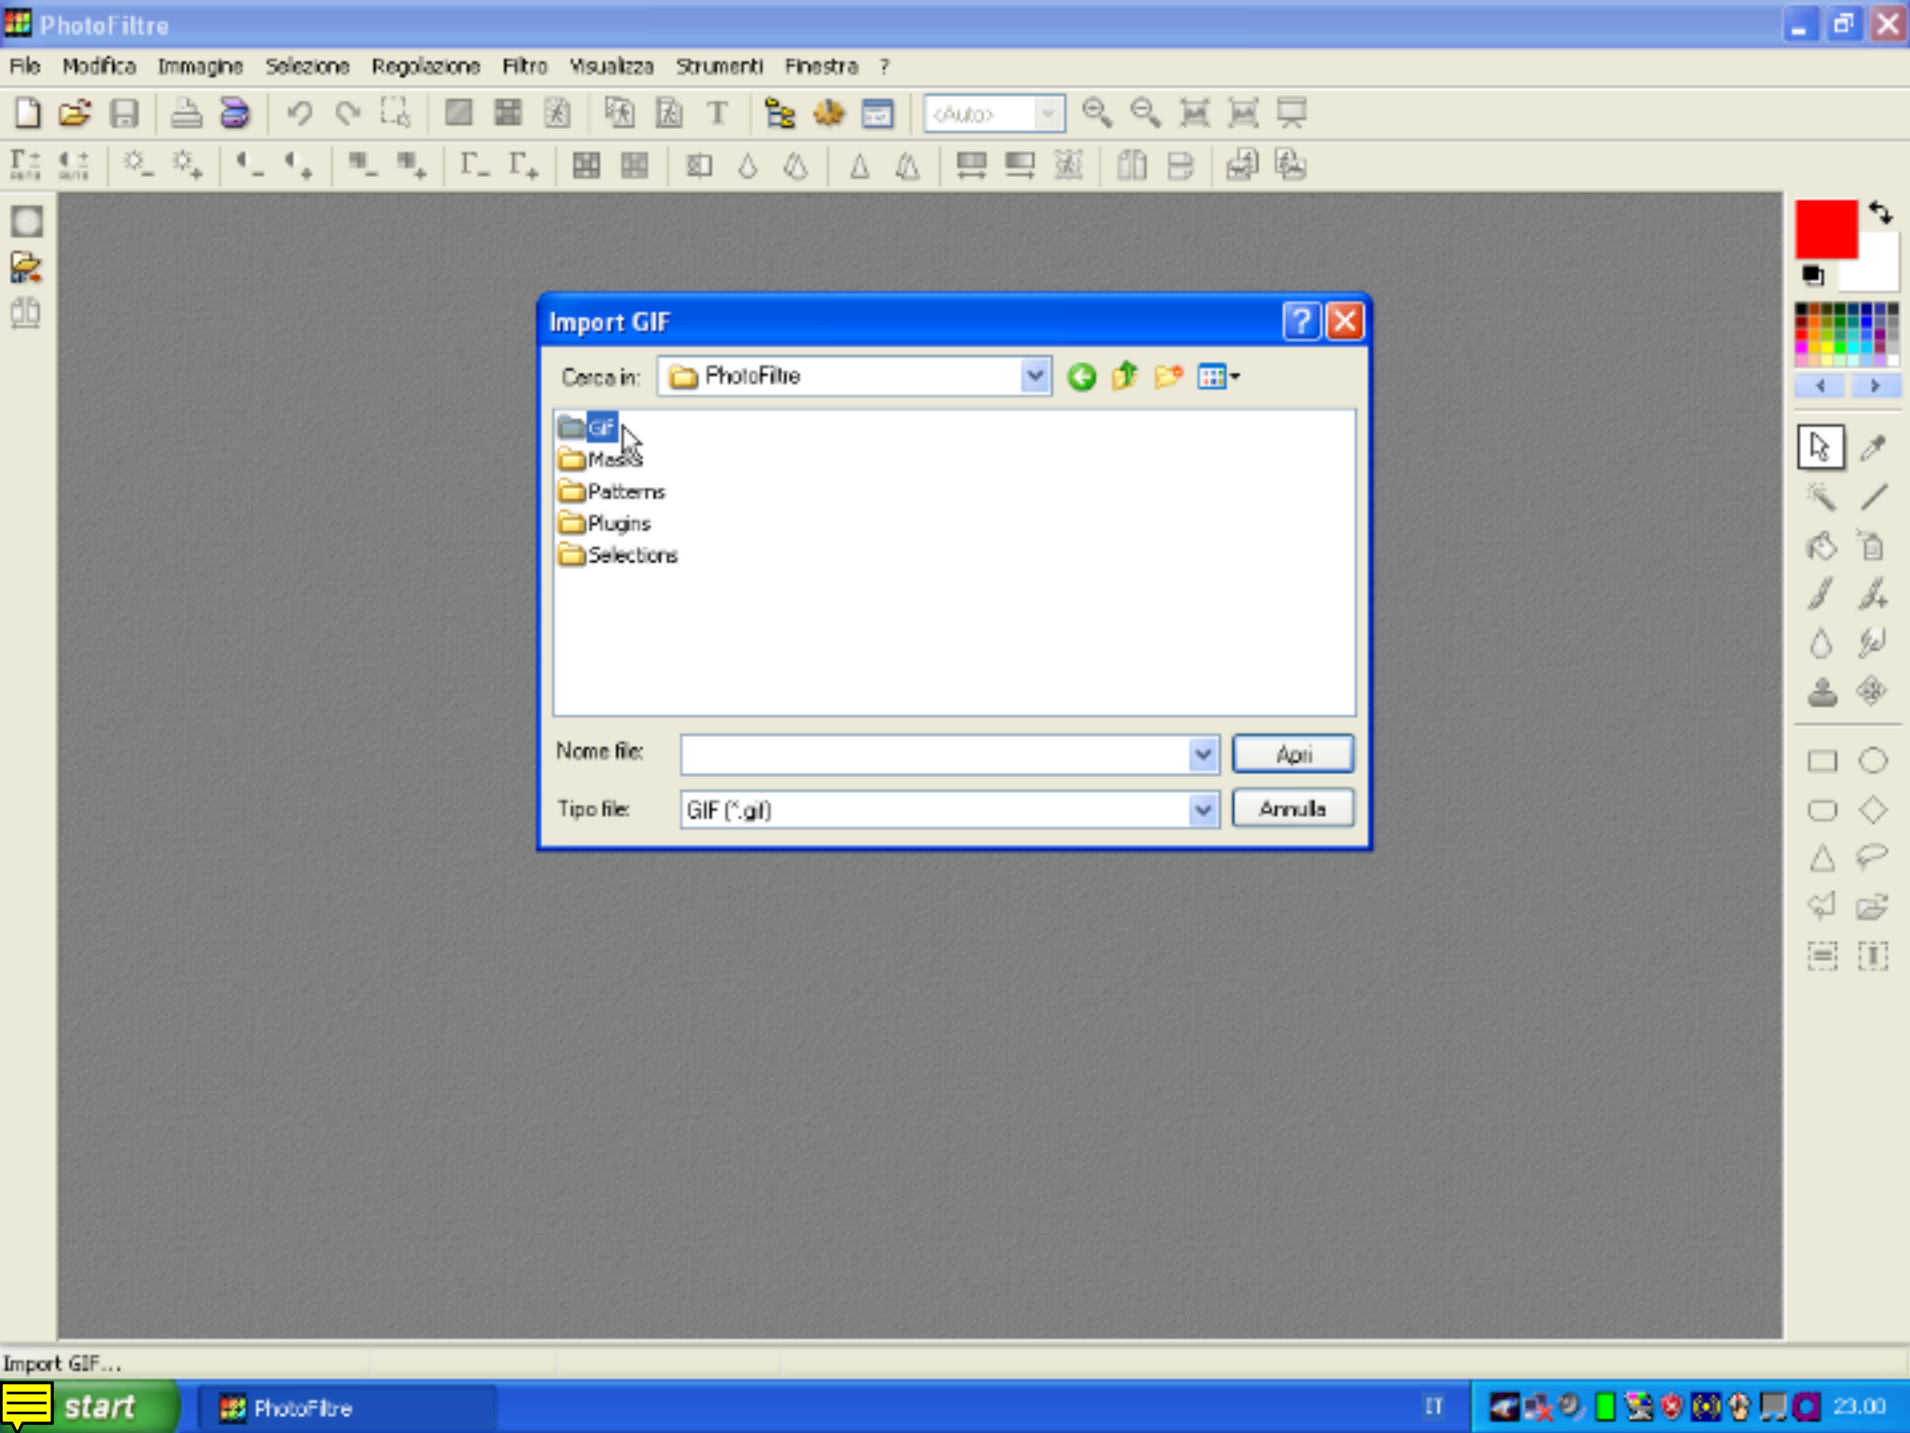

Dopo aver cliccato sull'icona si aprirà una finestra di dialogo per selezionare il file da importare.

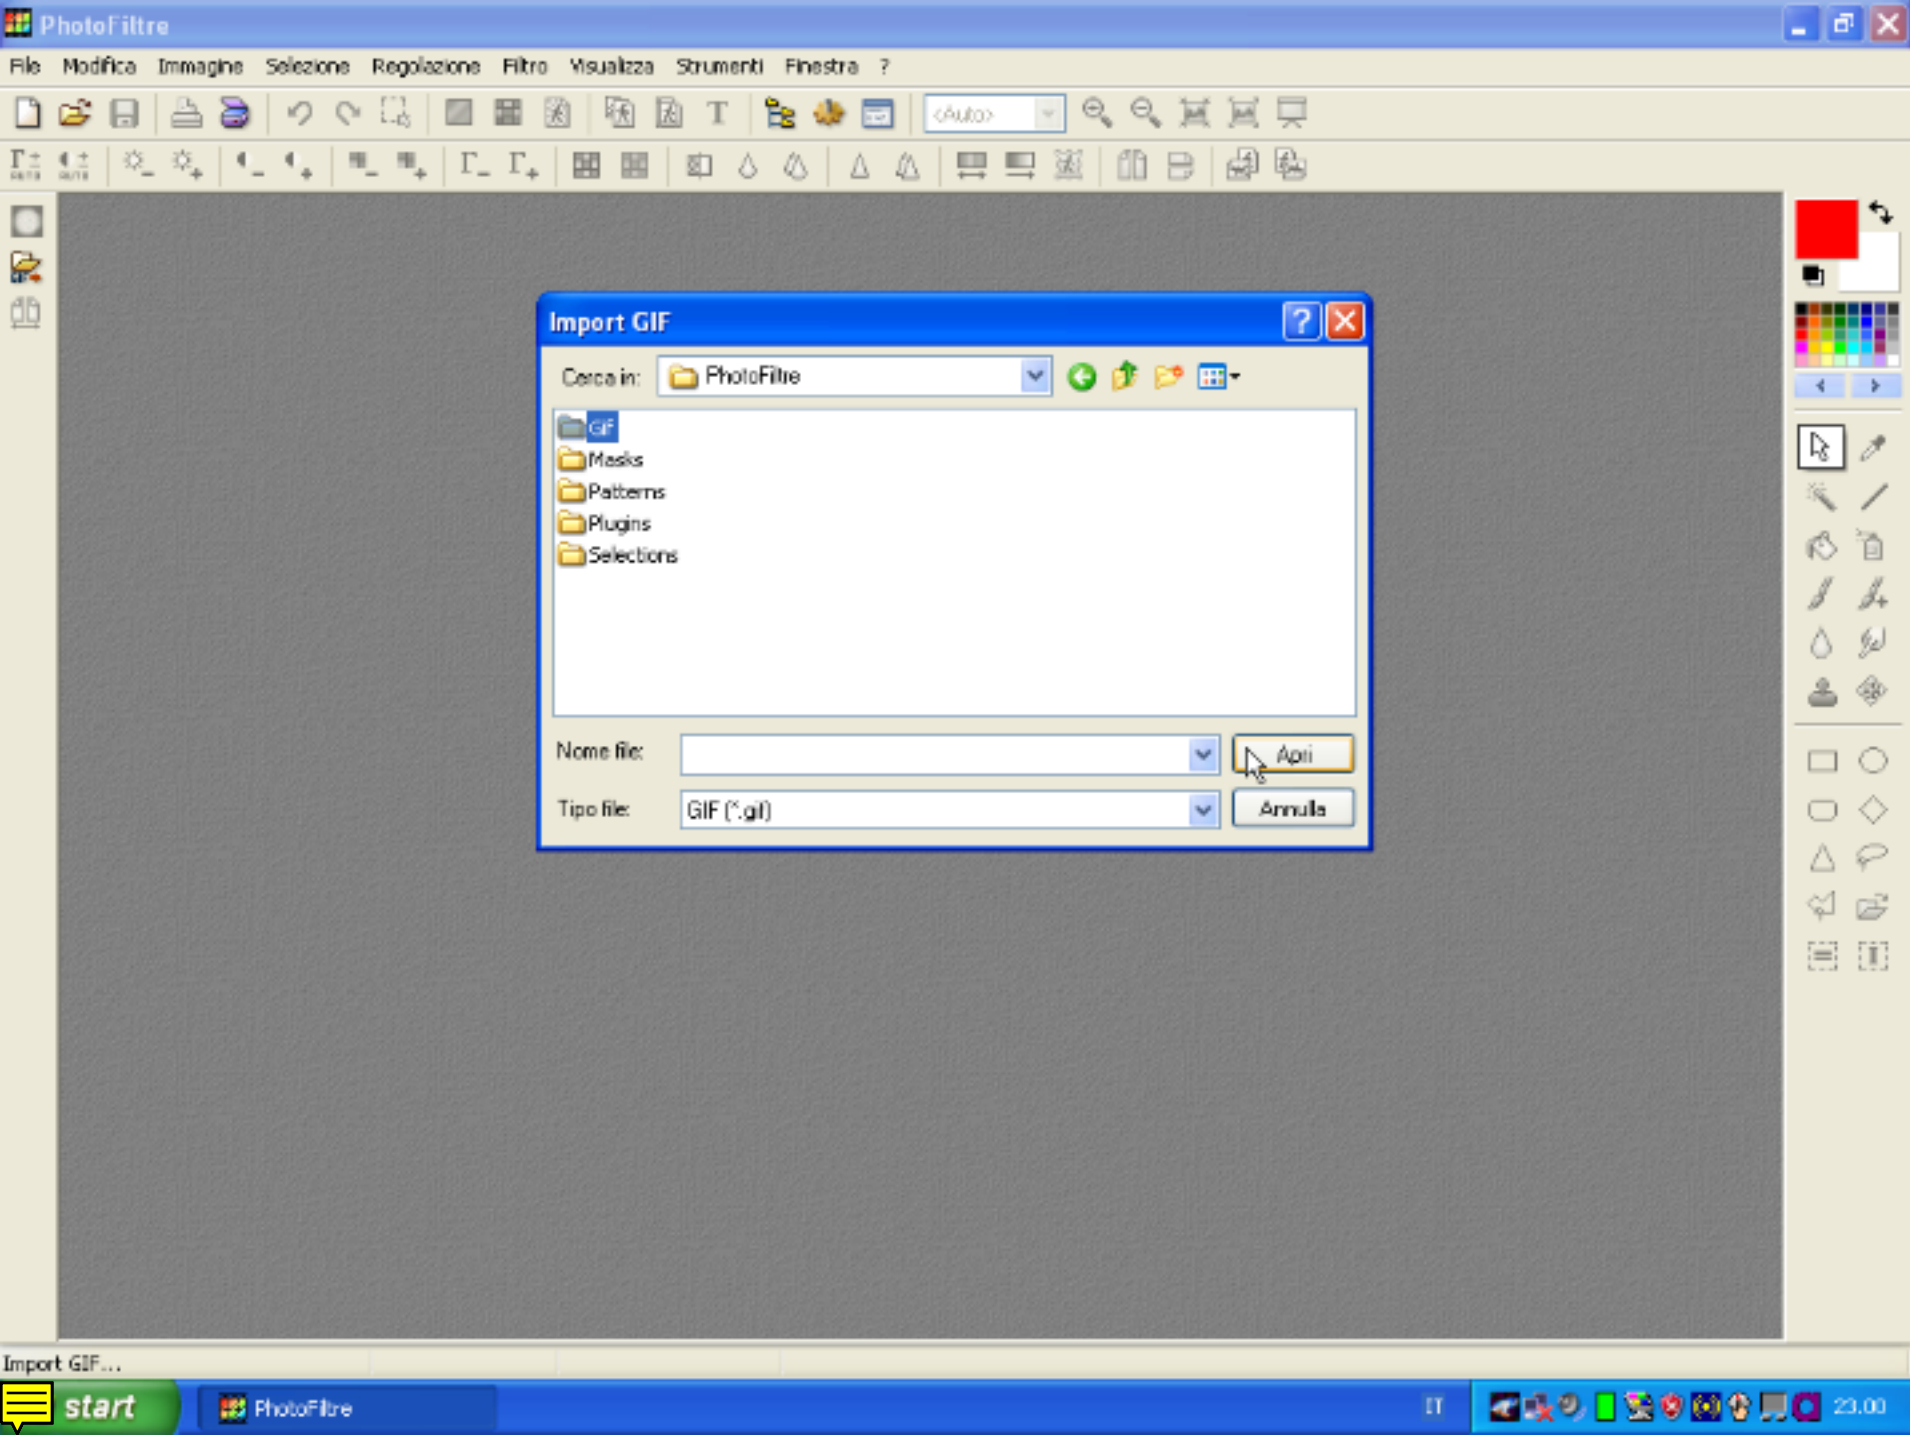

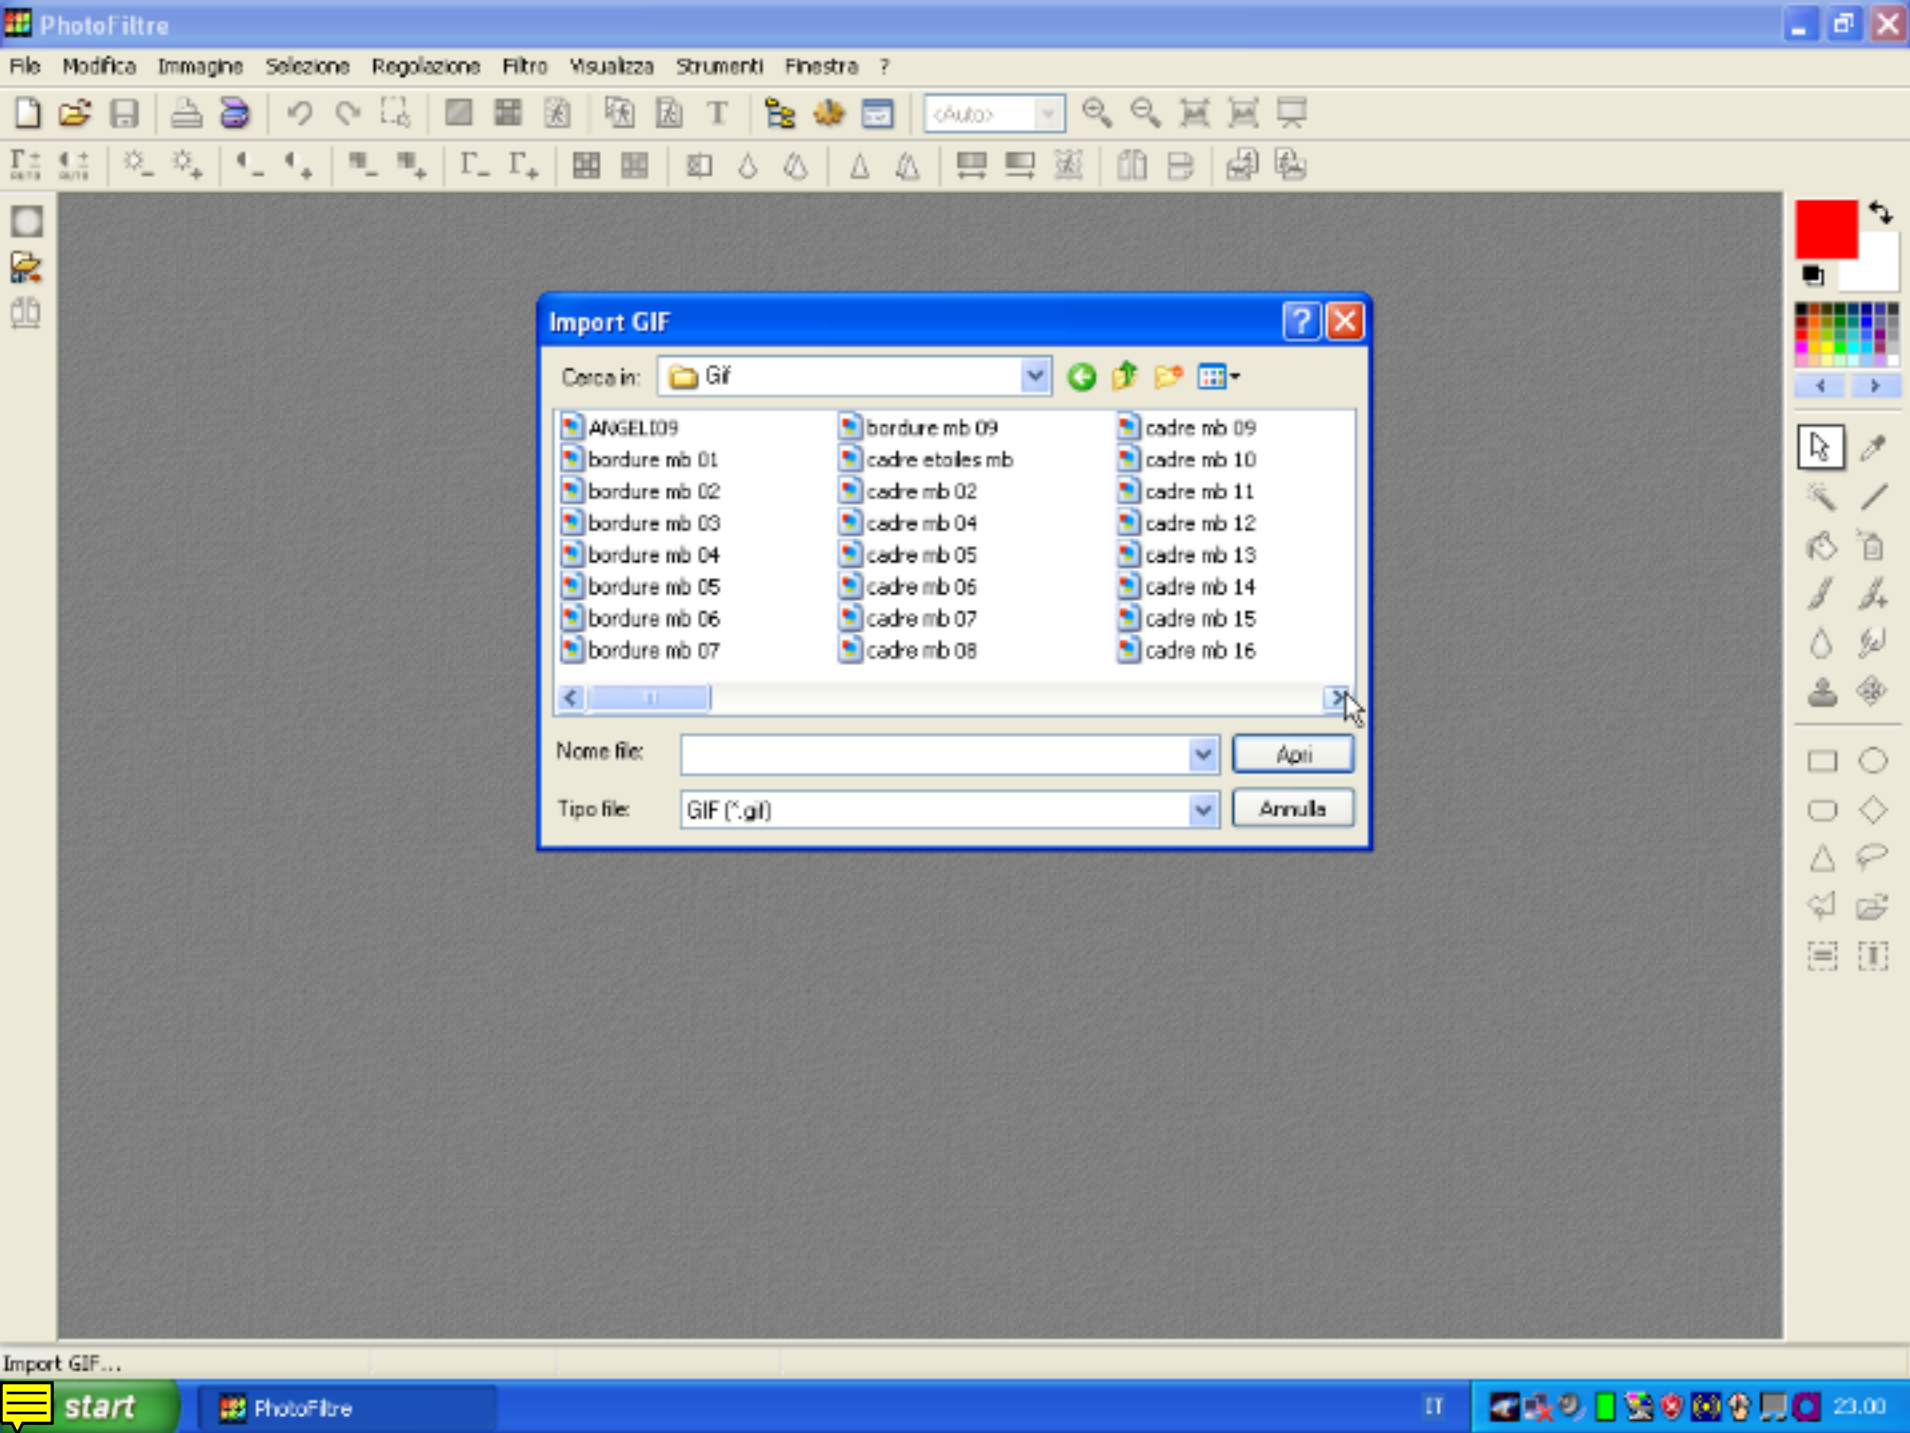

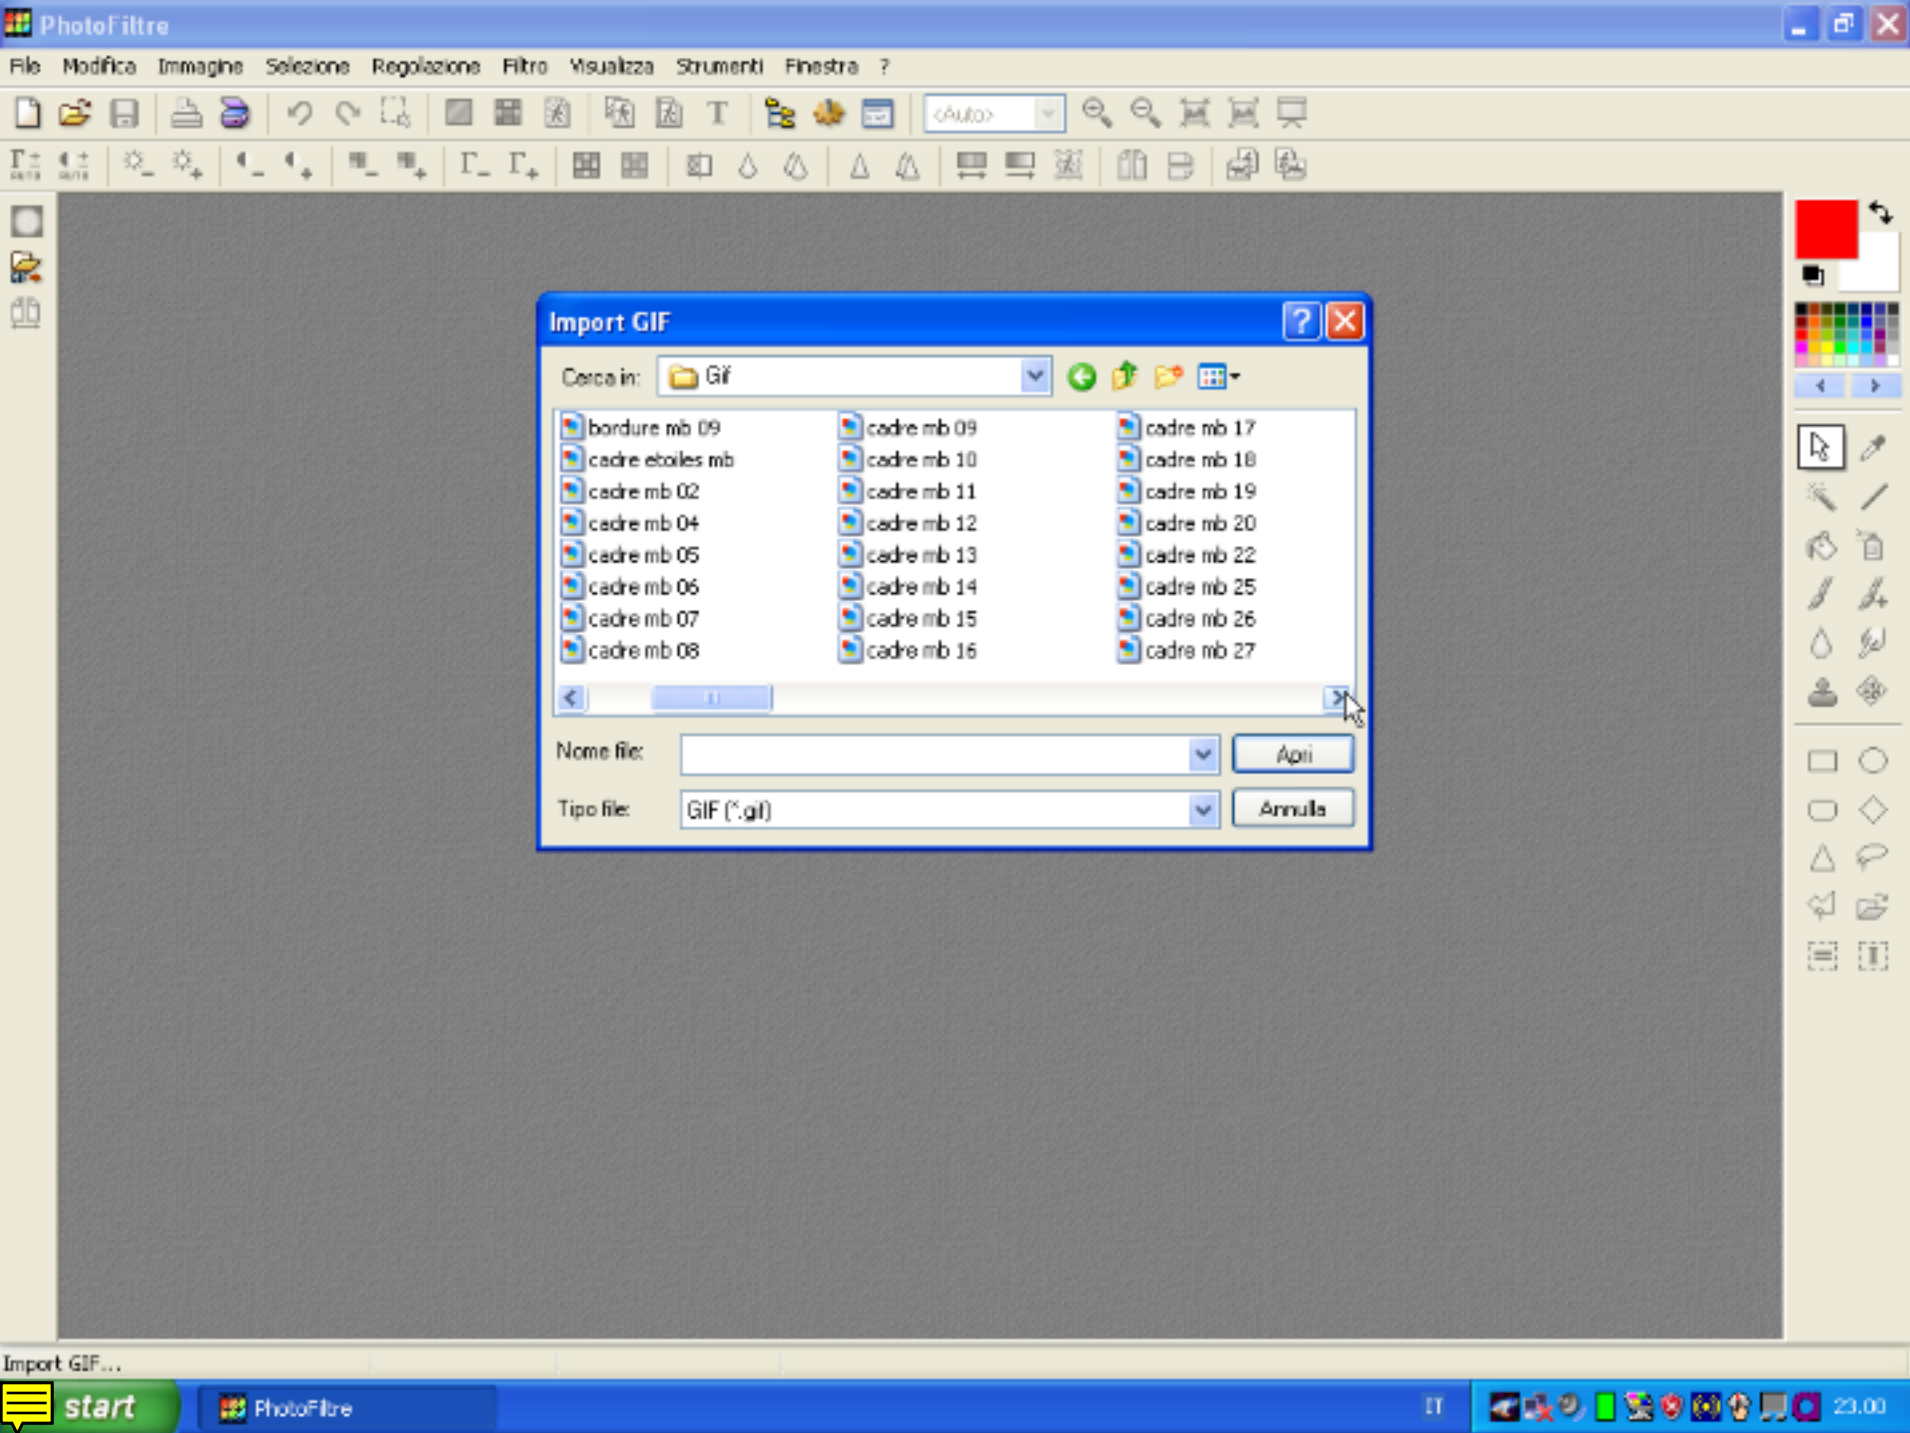

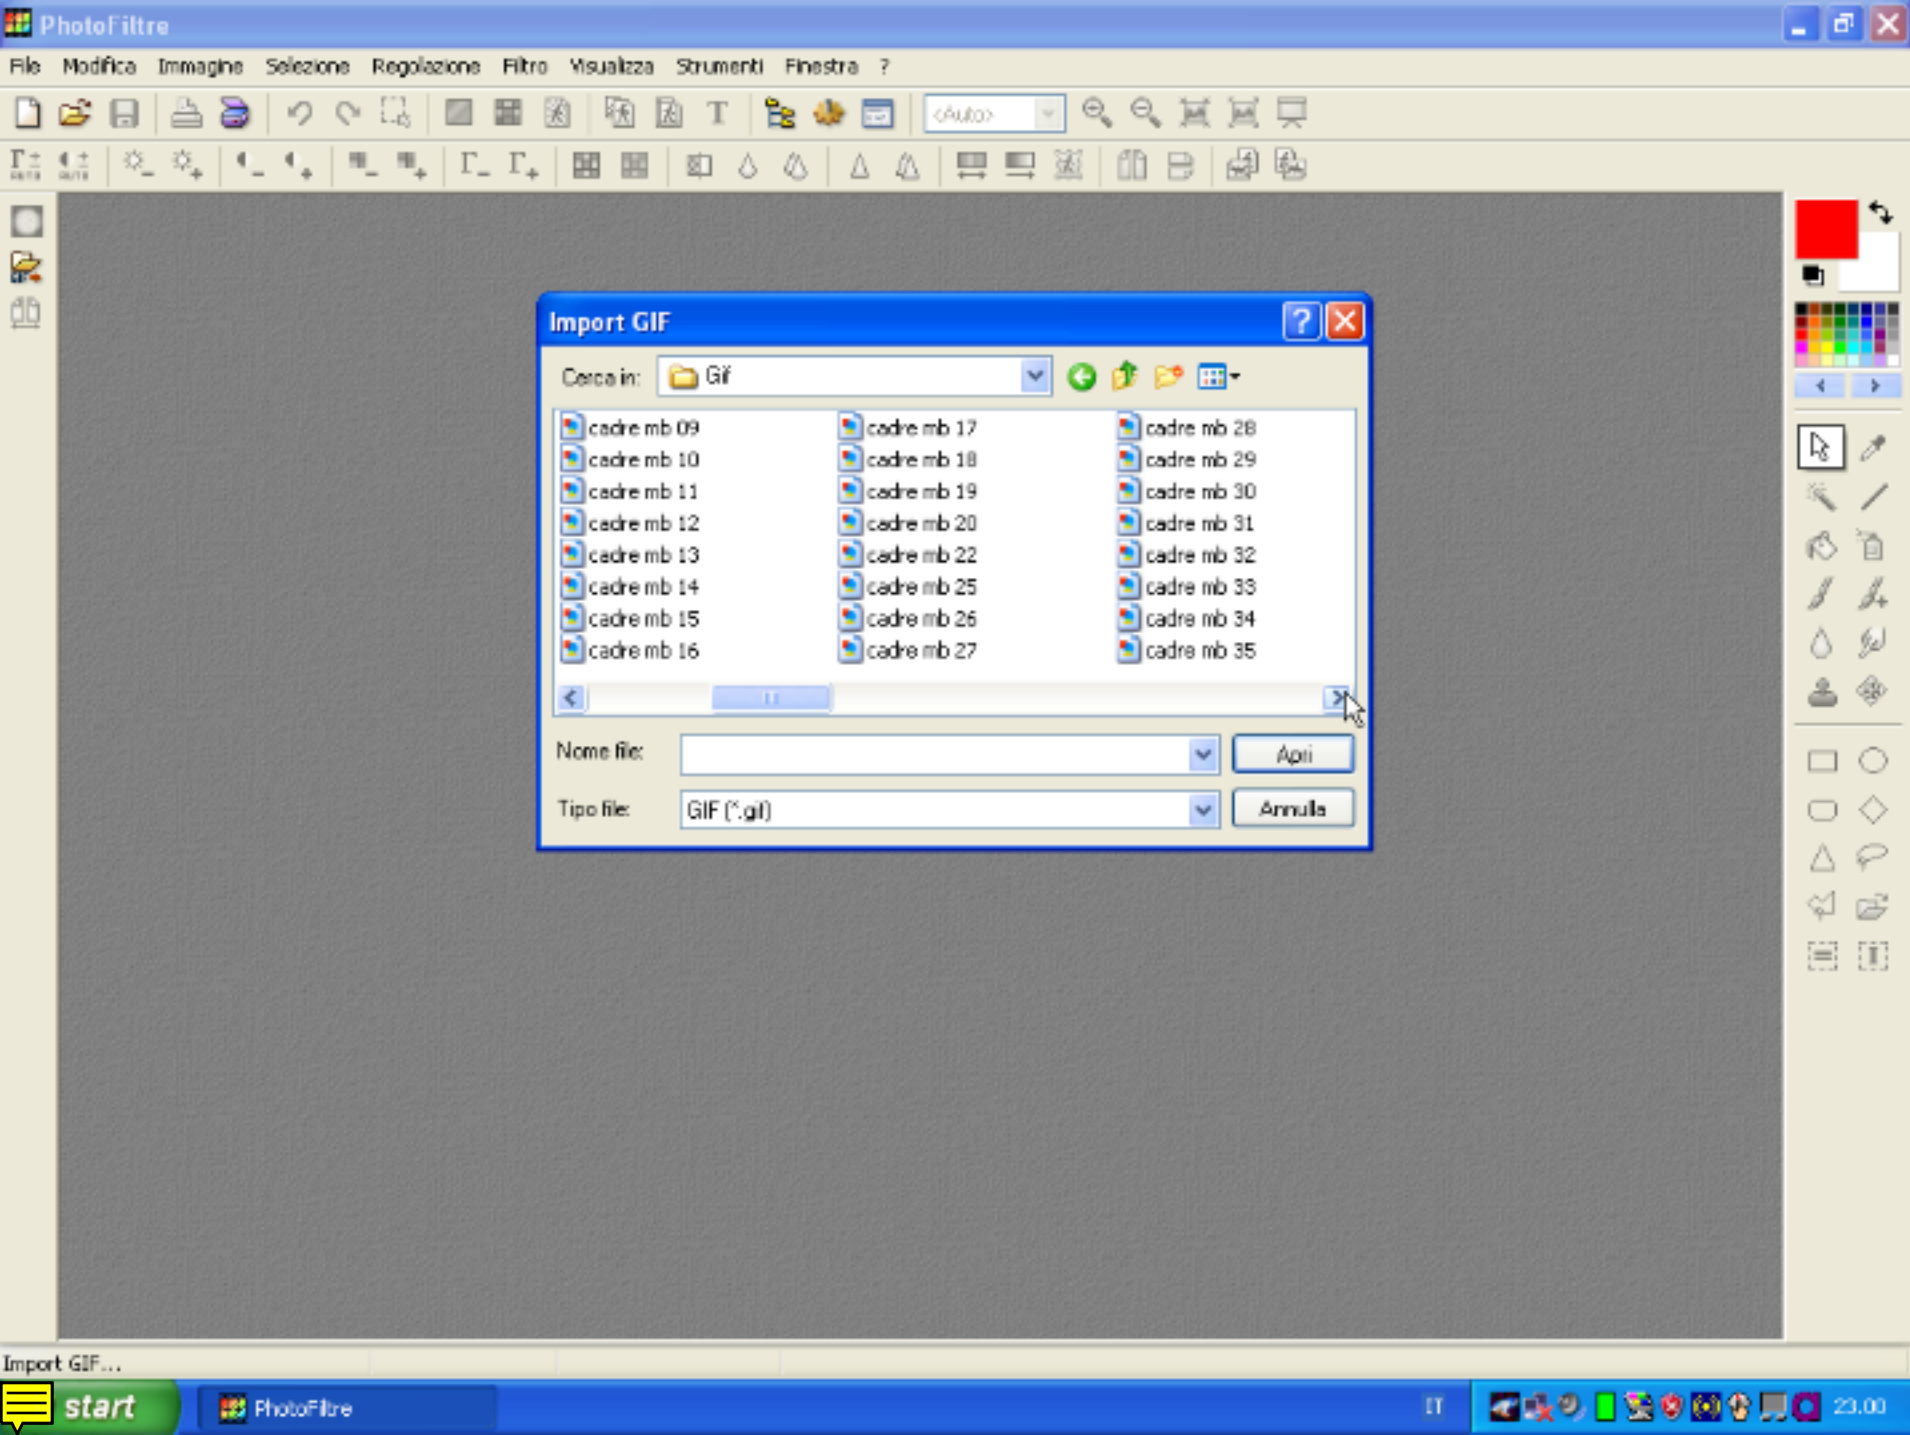

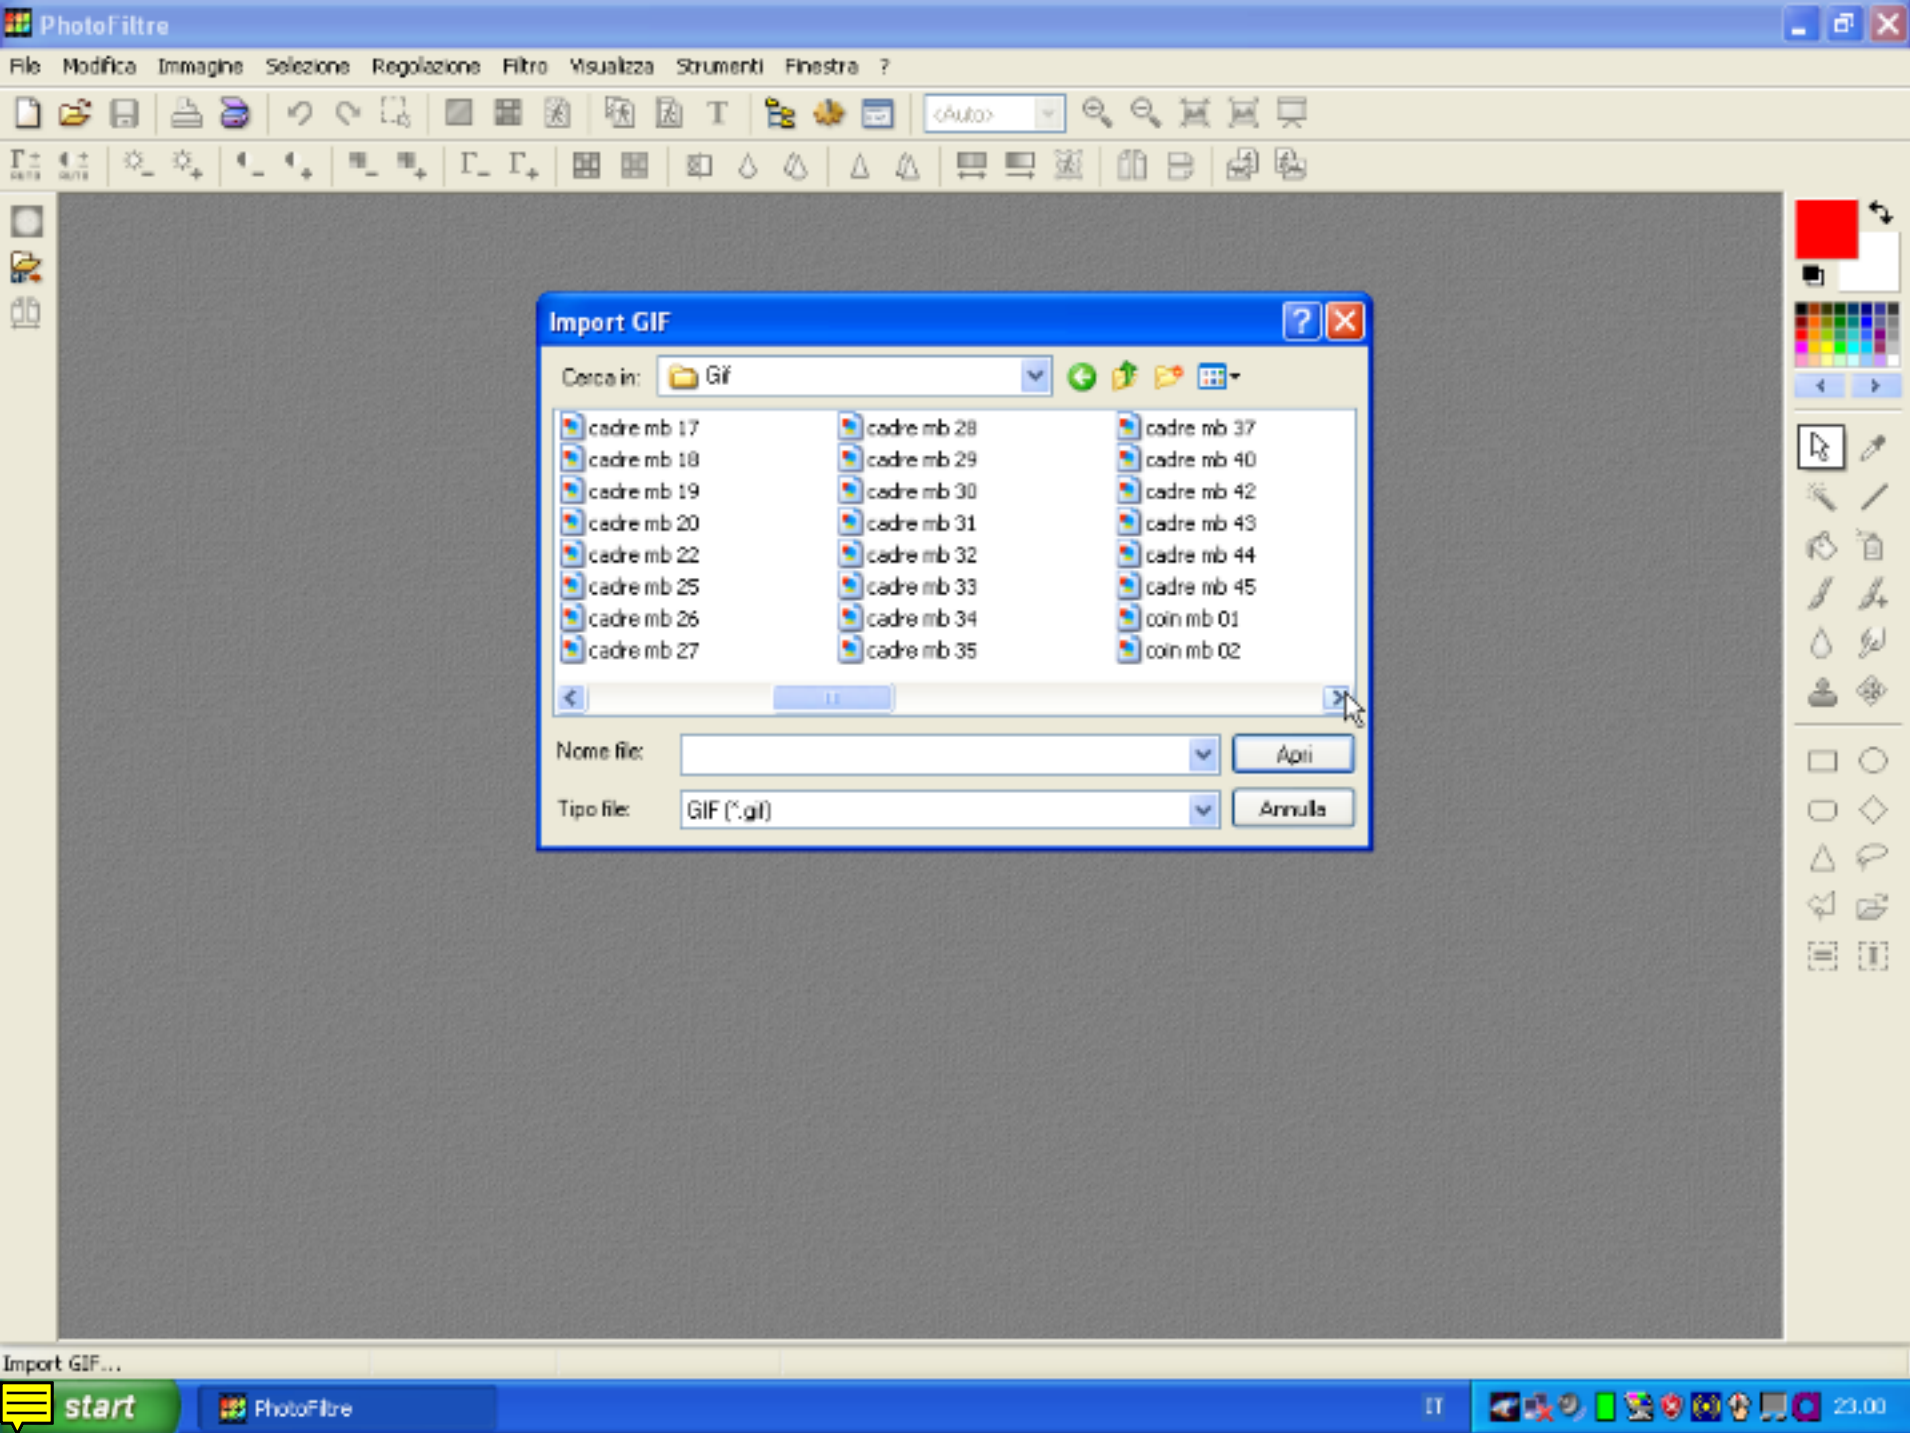

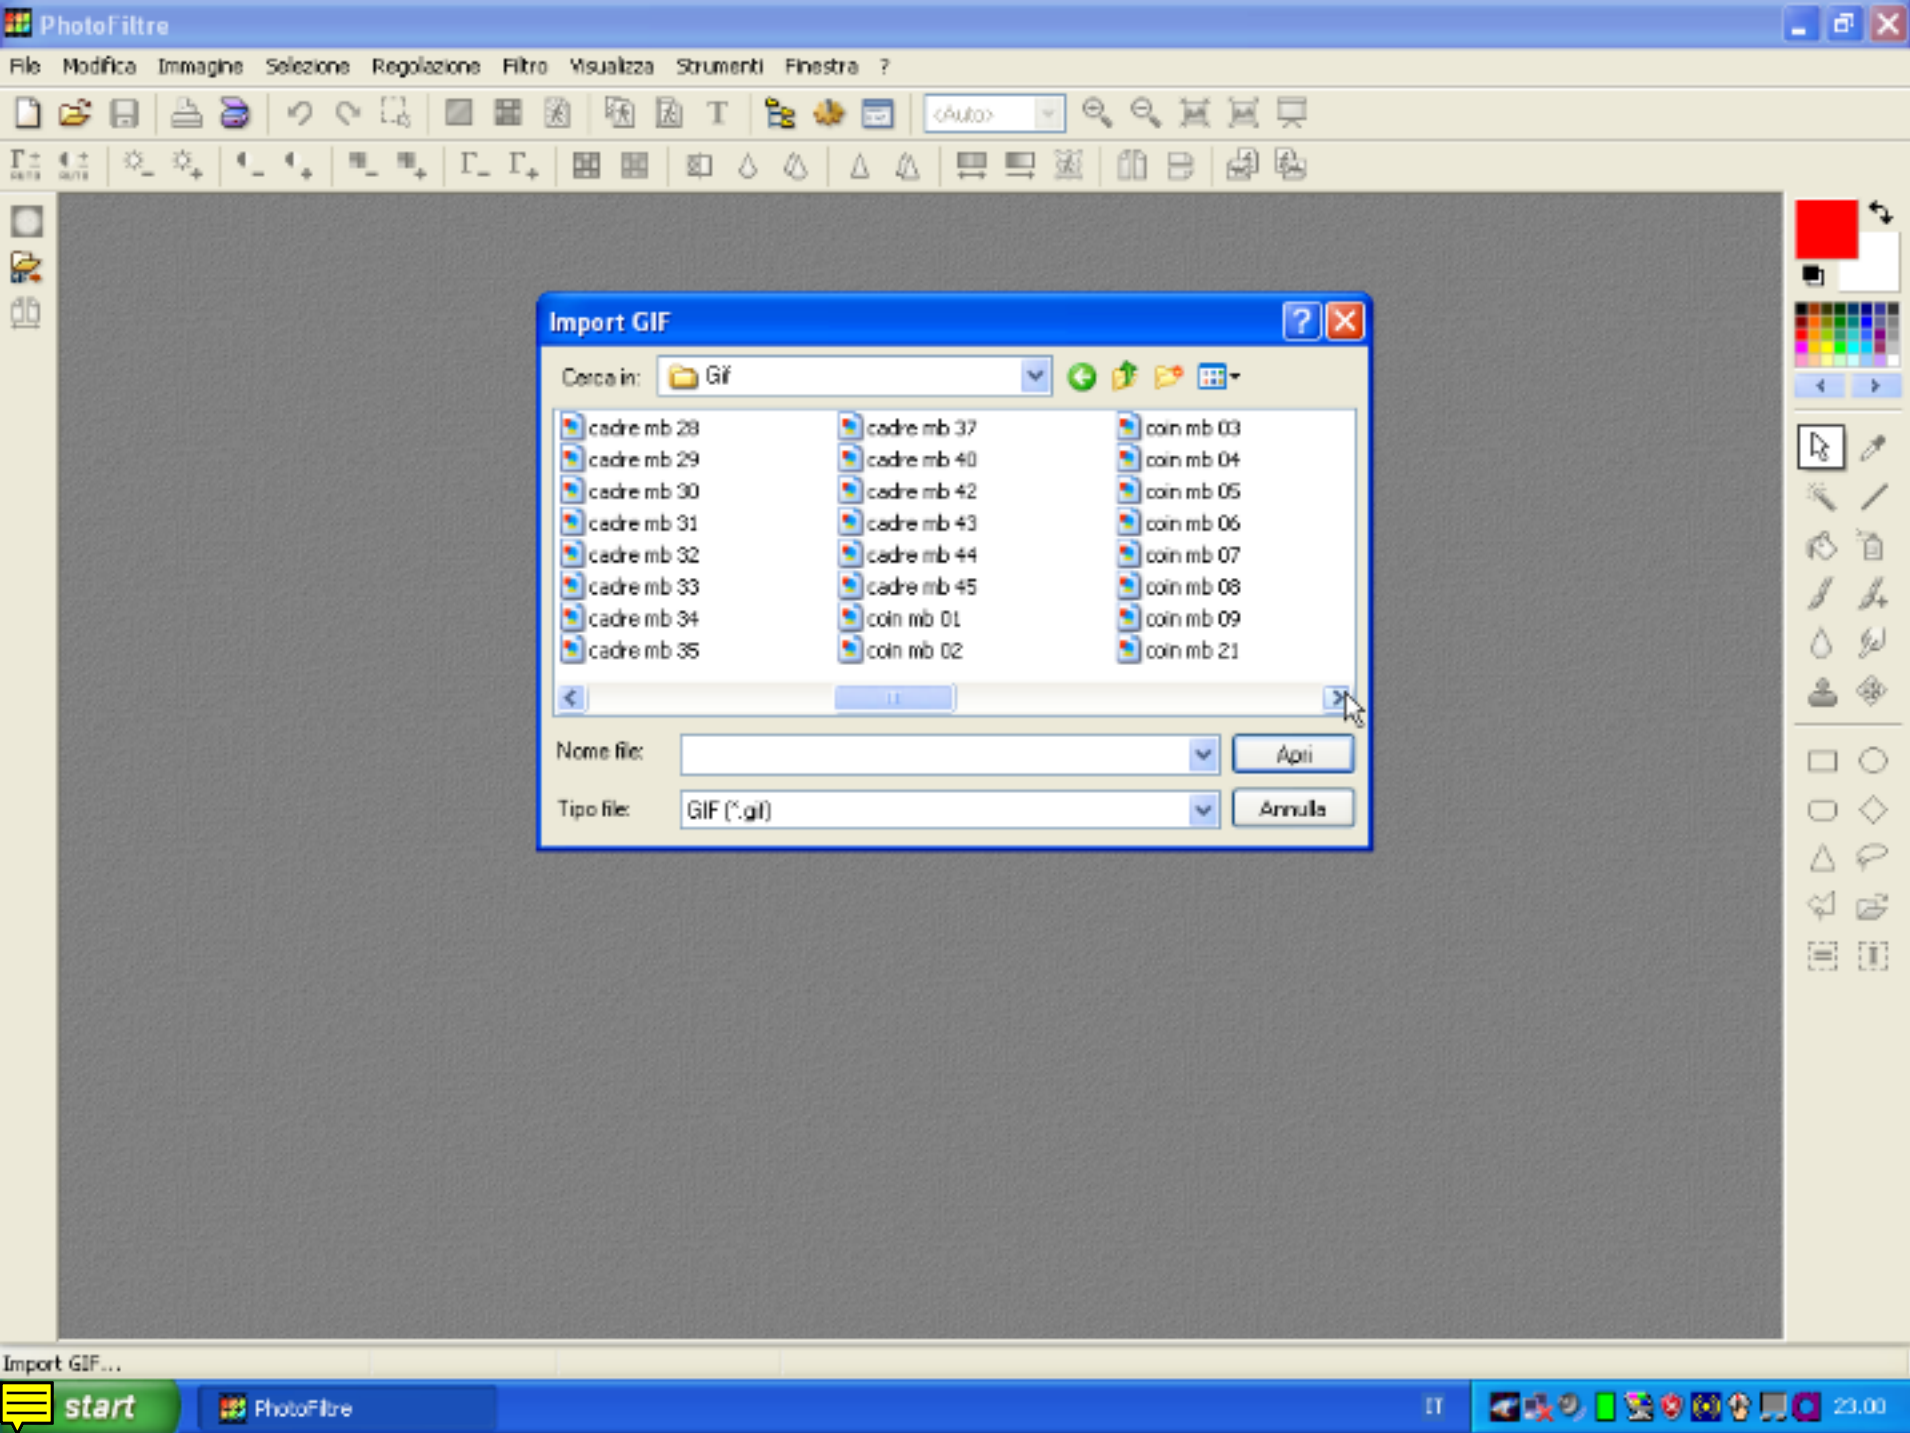

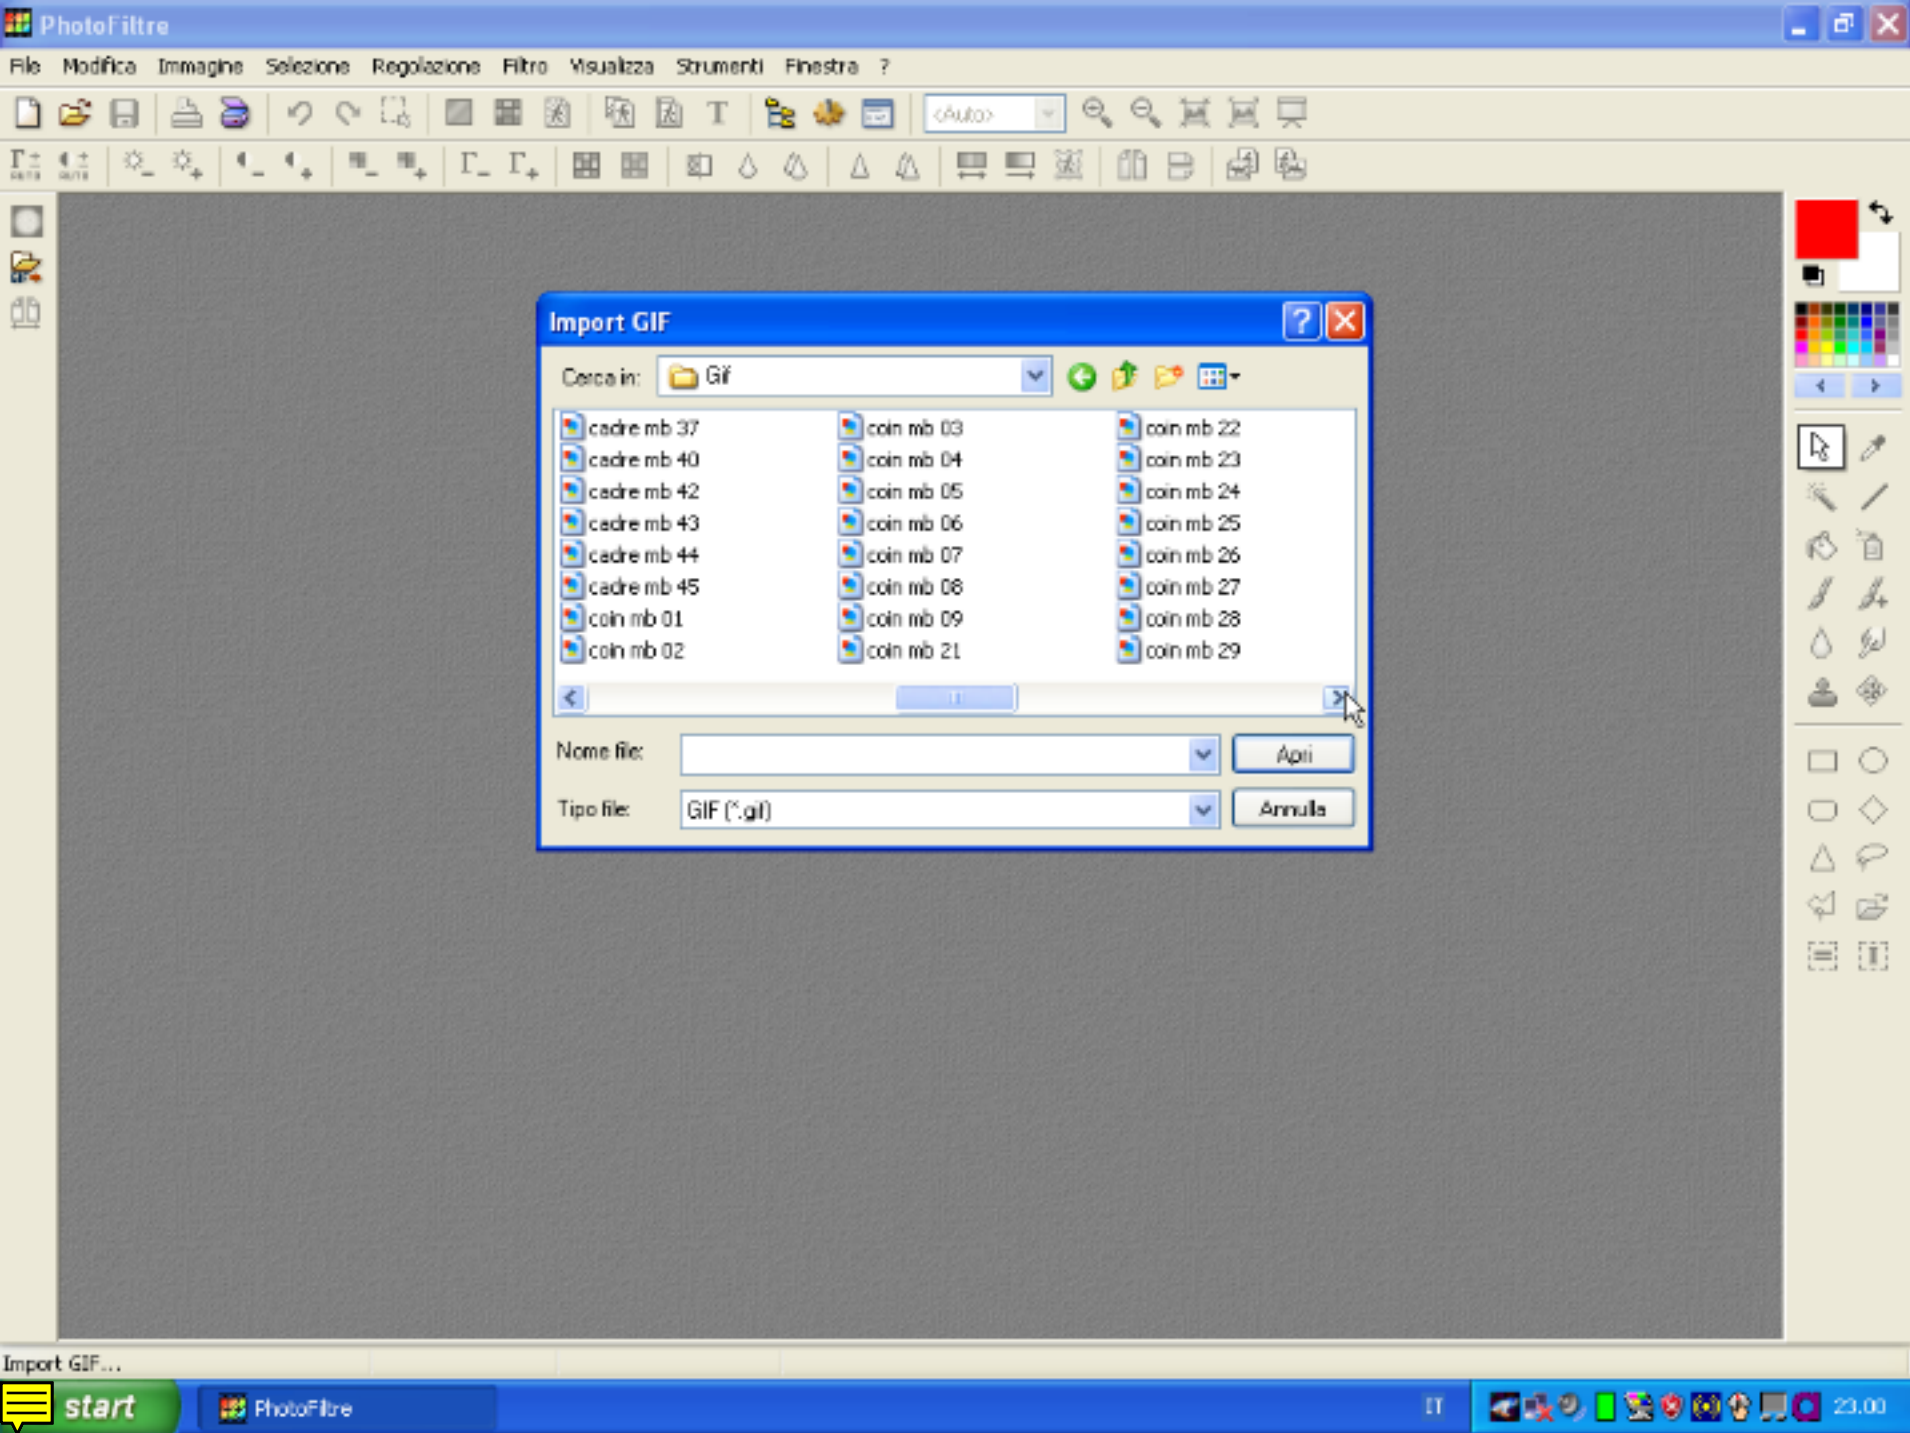

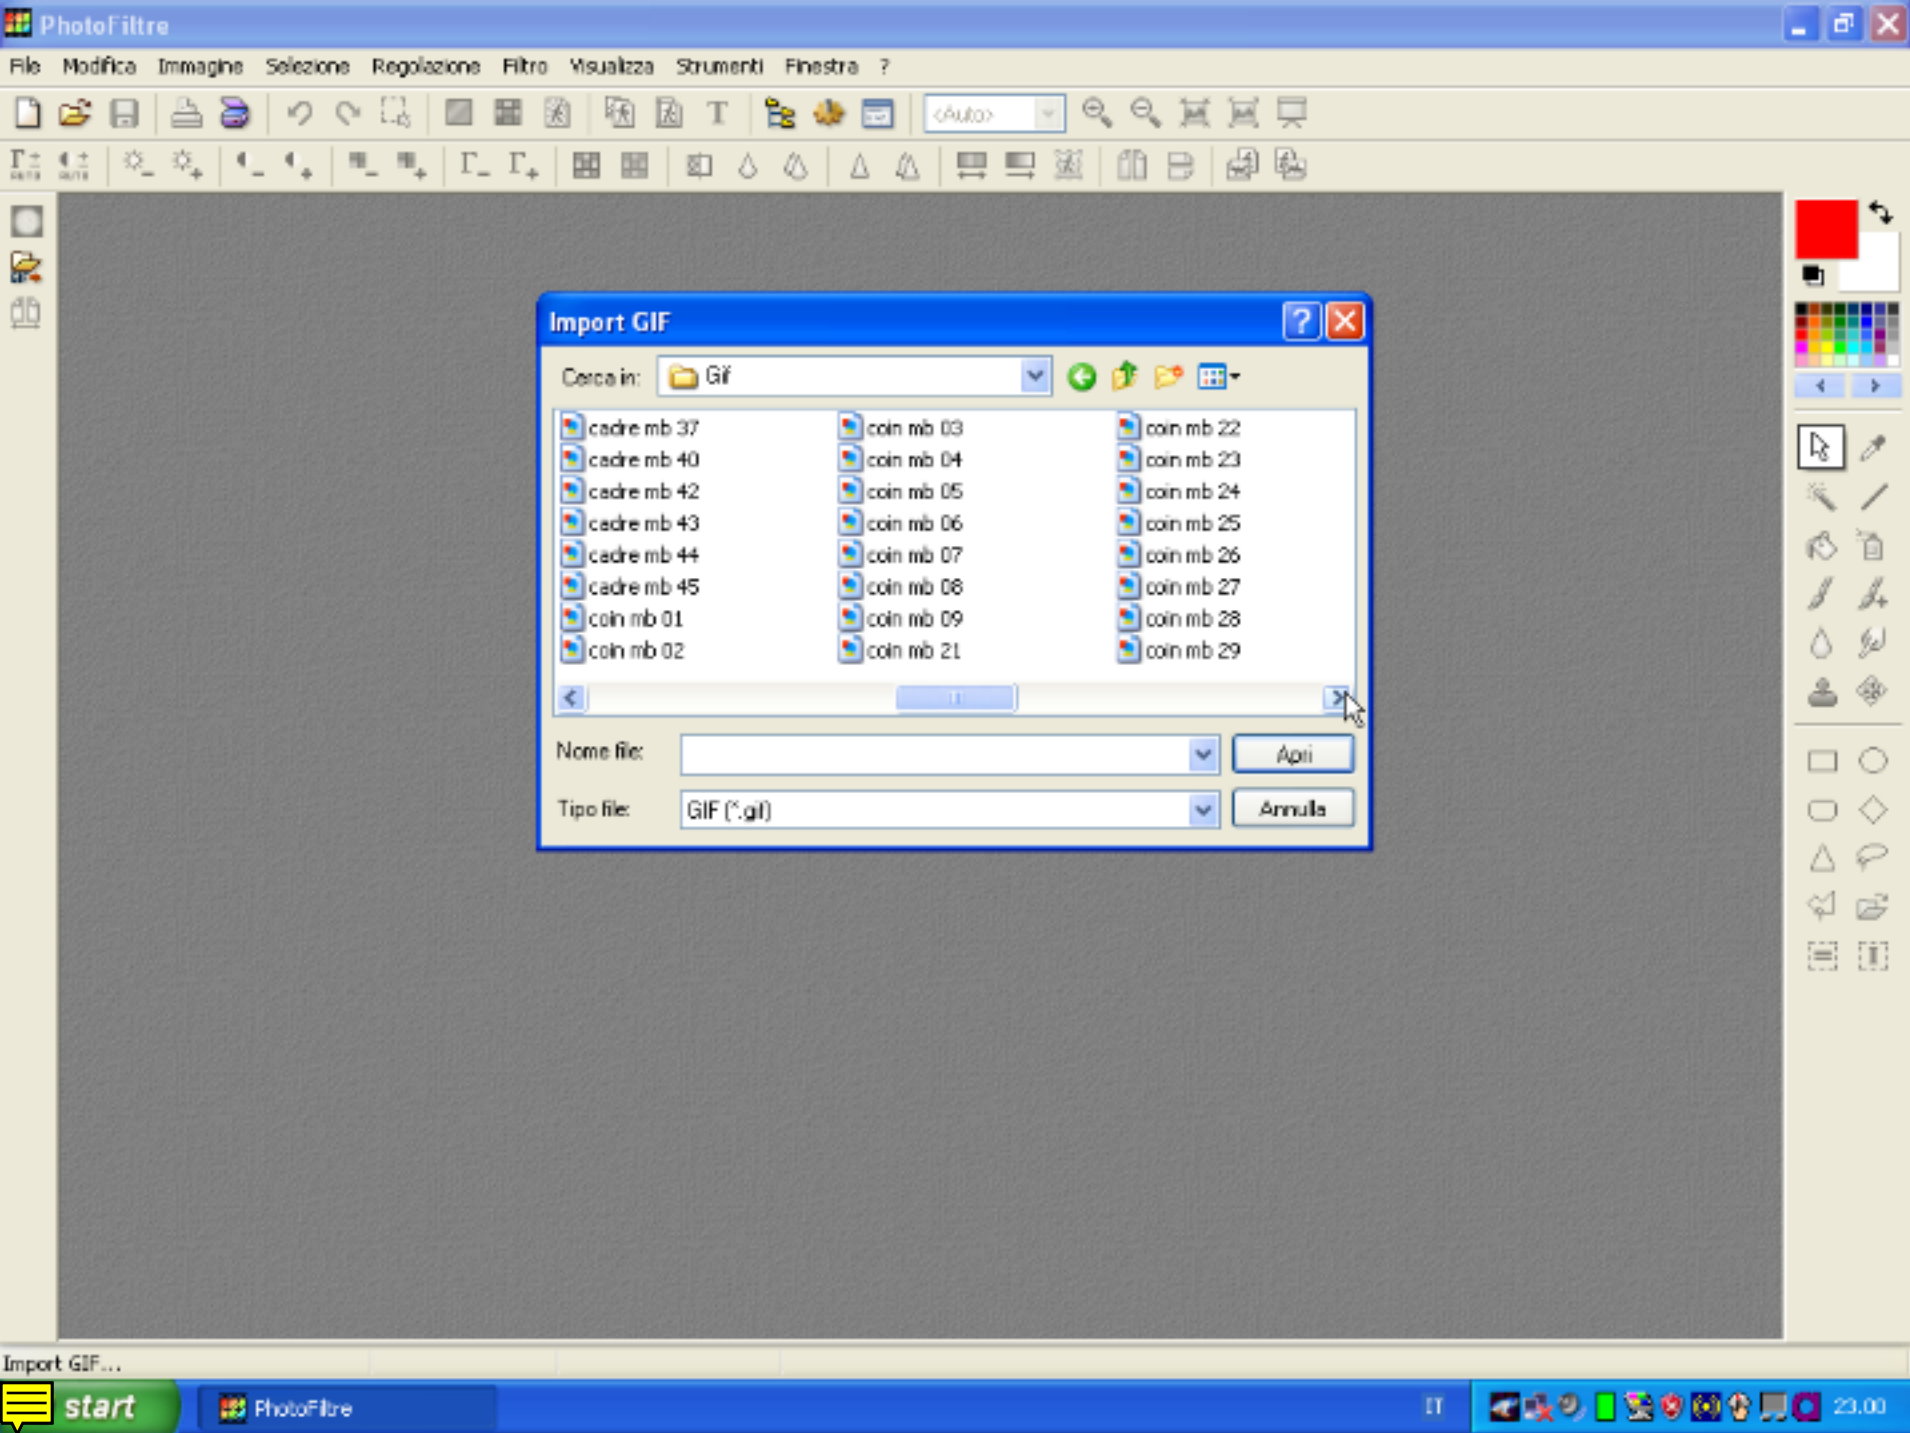

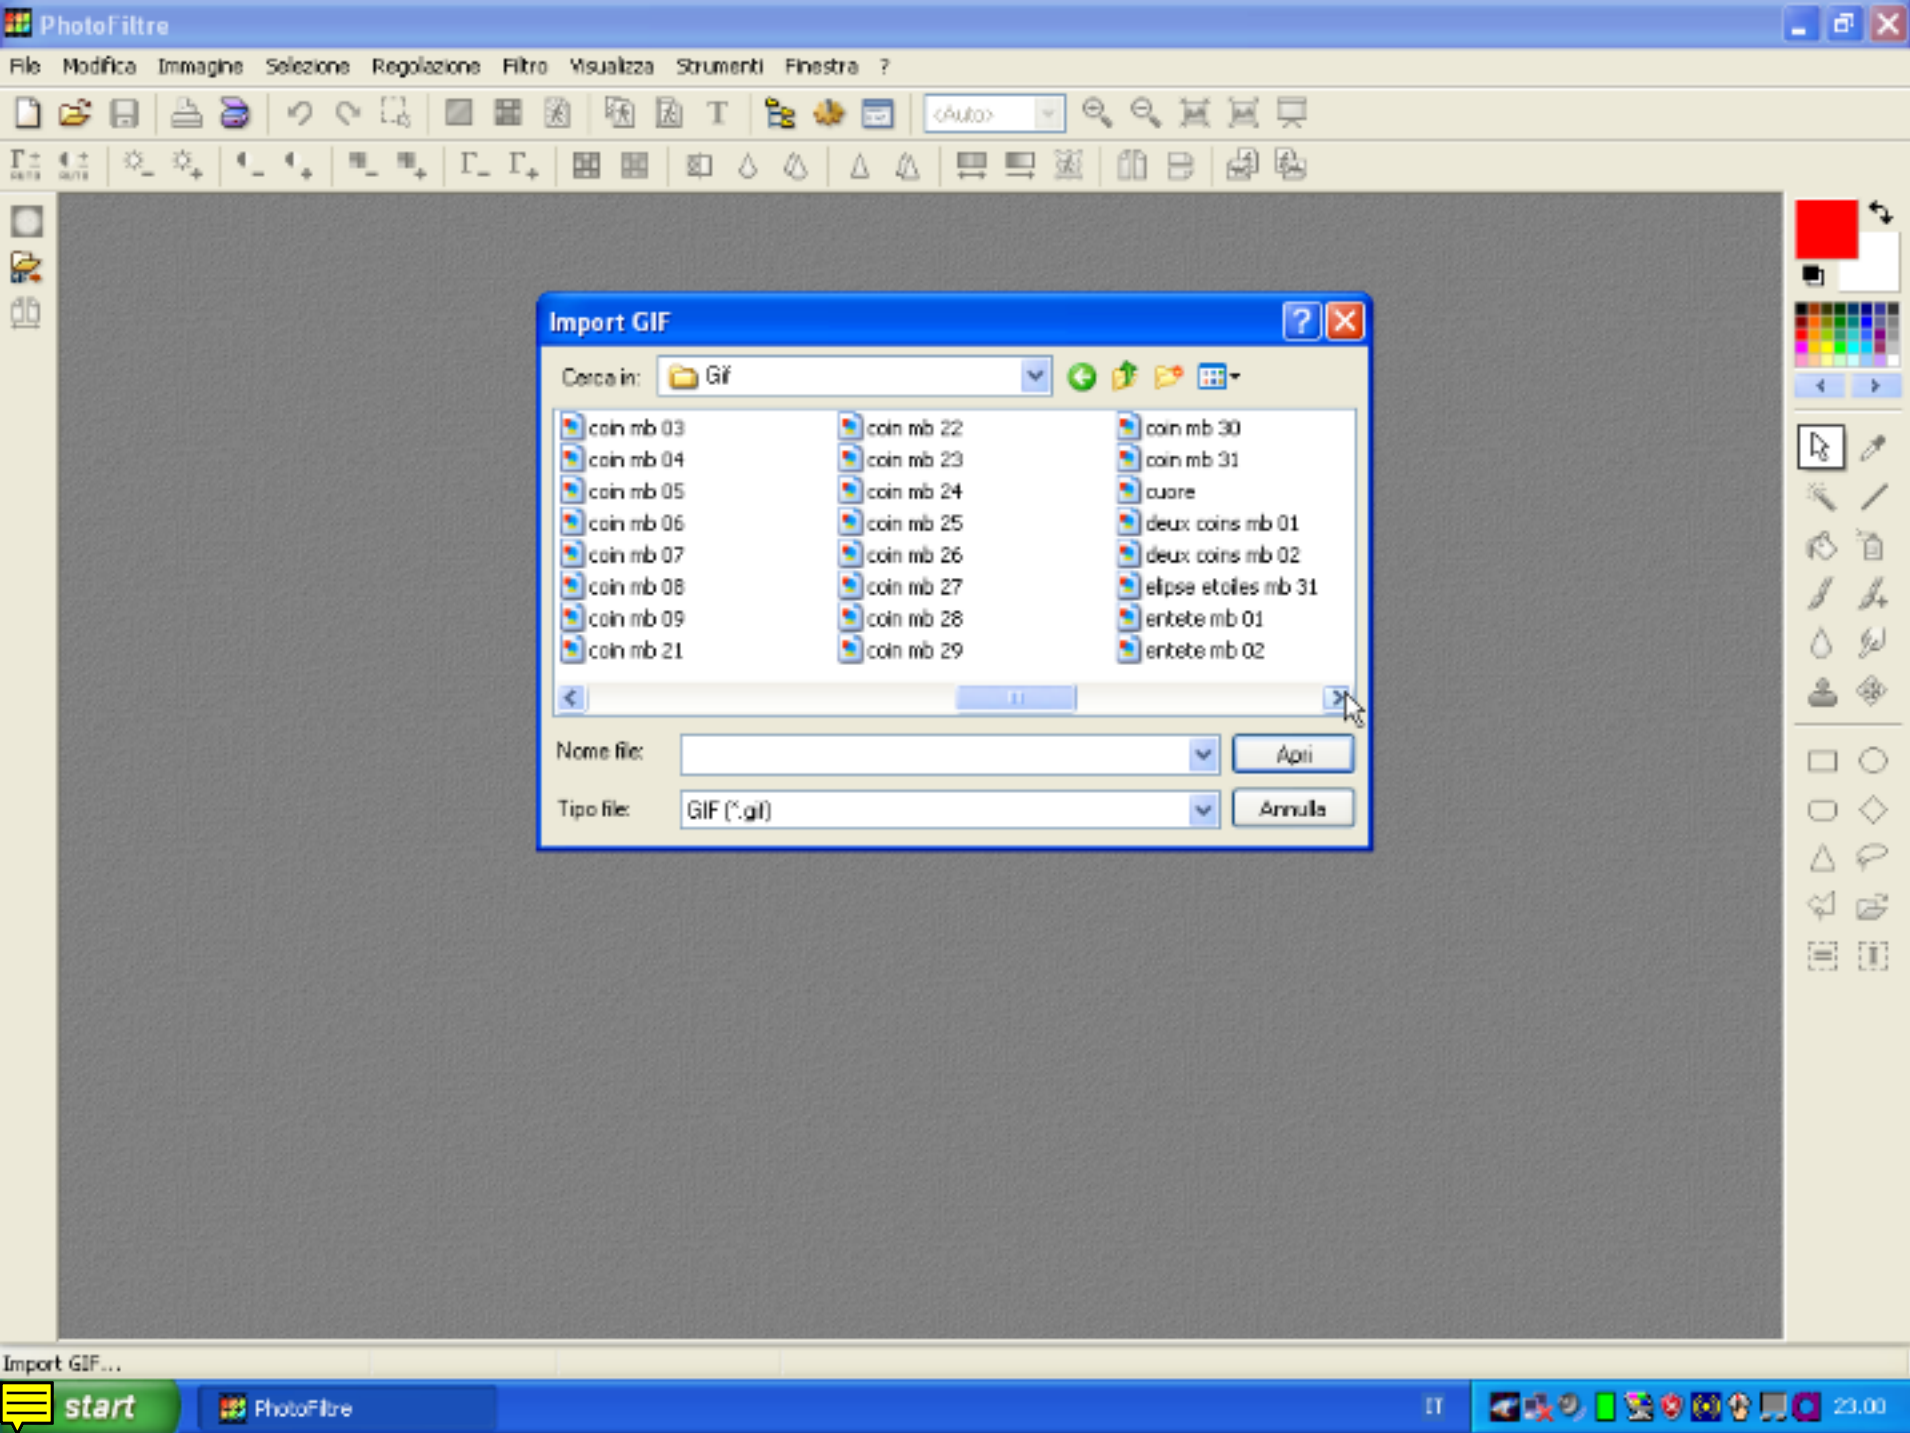

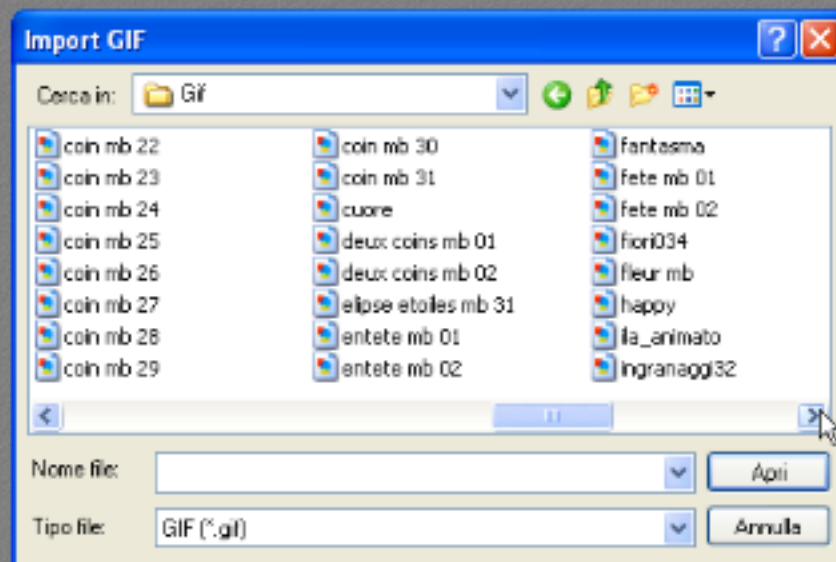

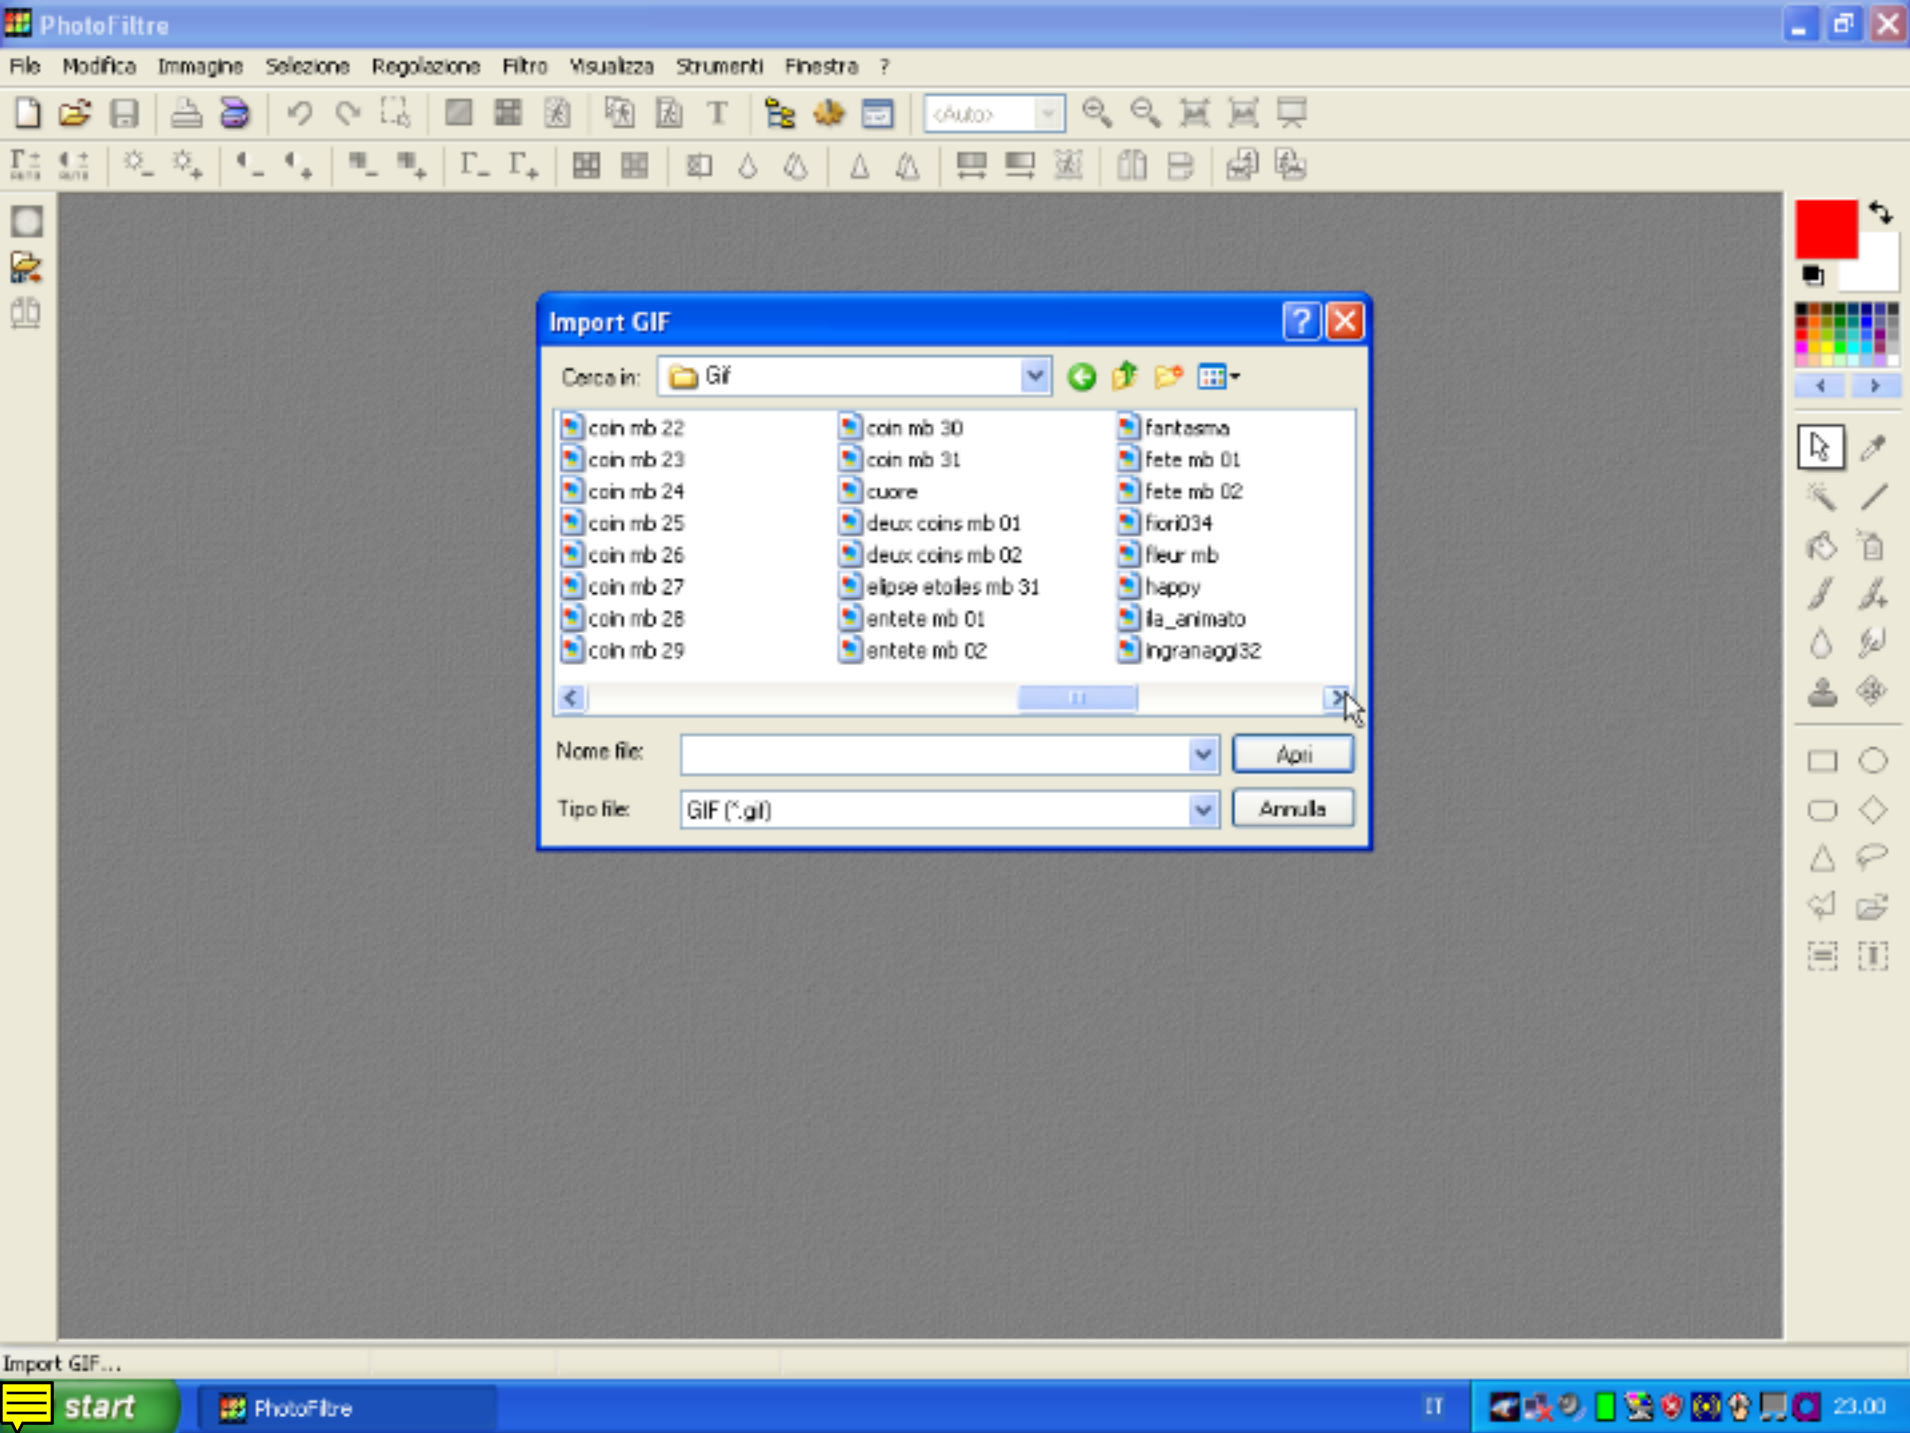

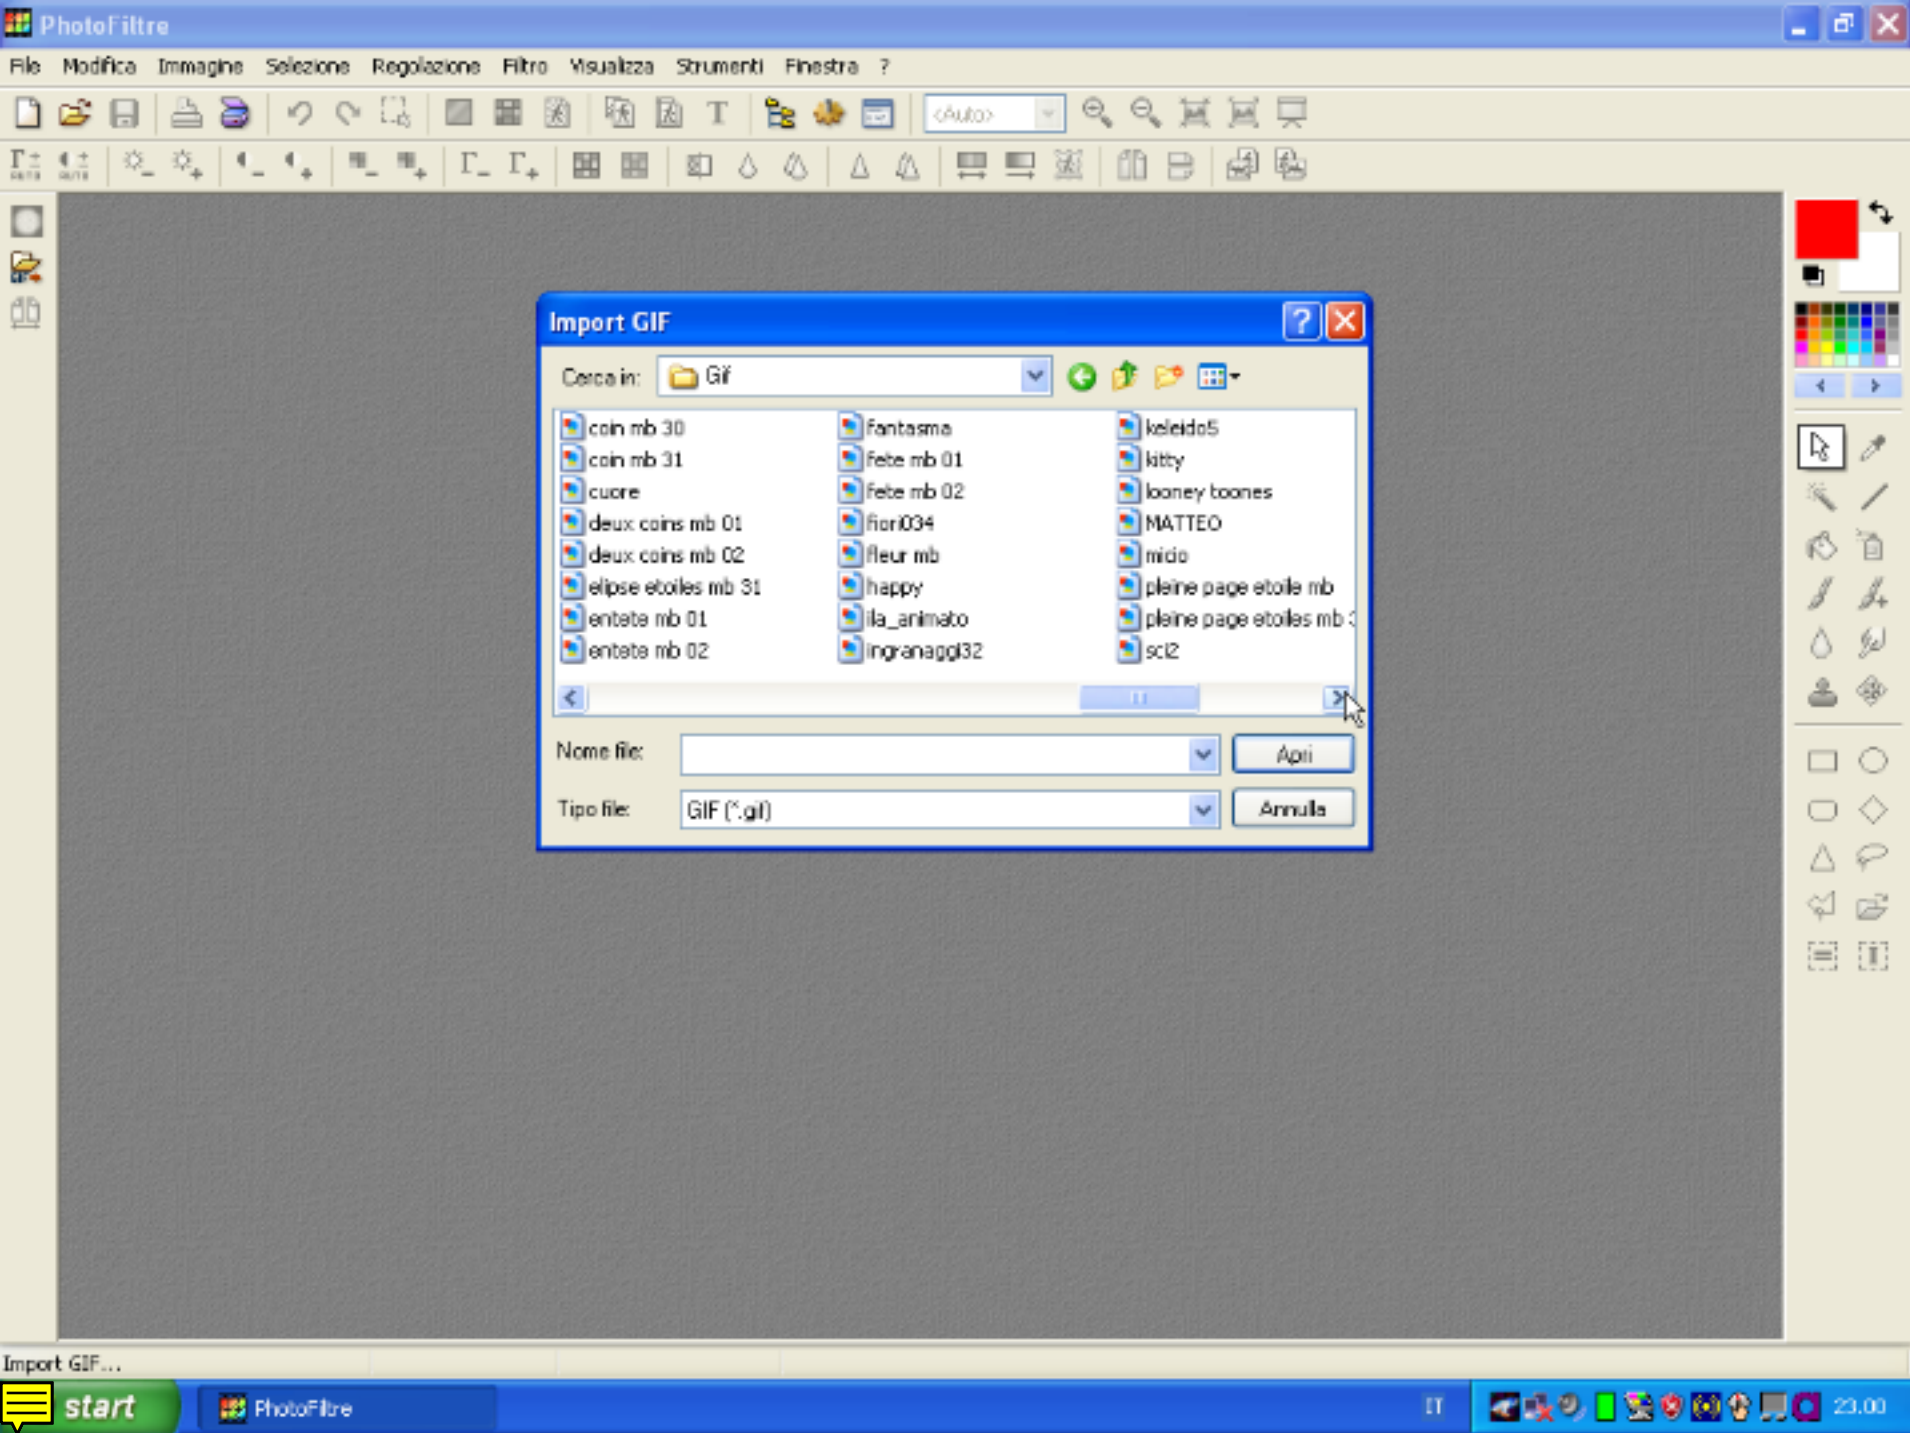

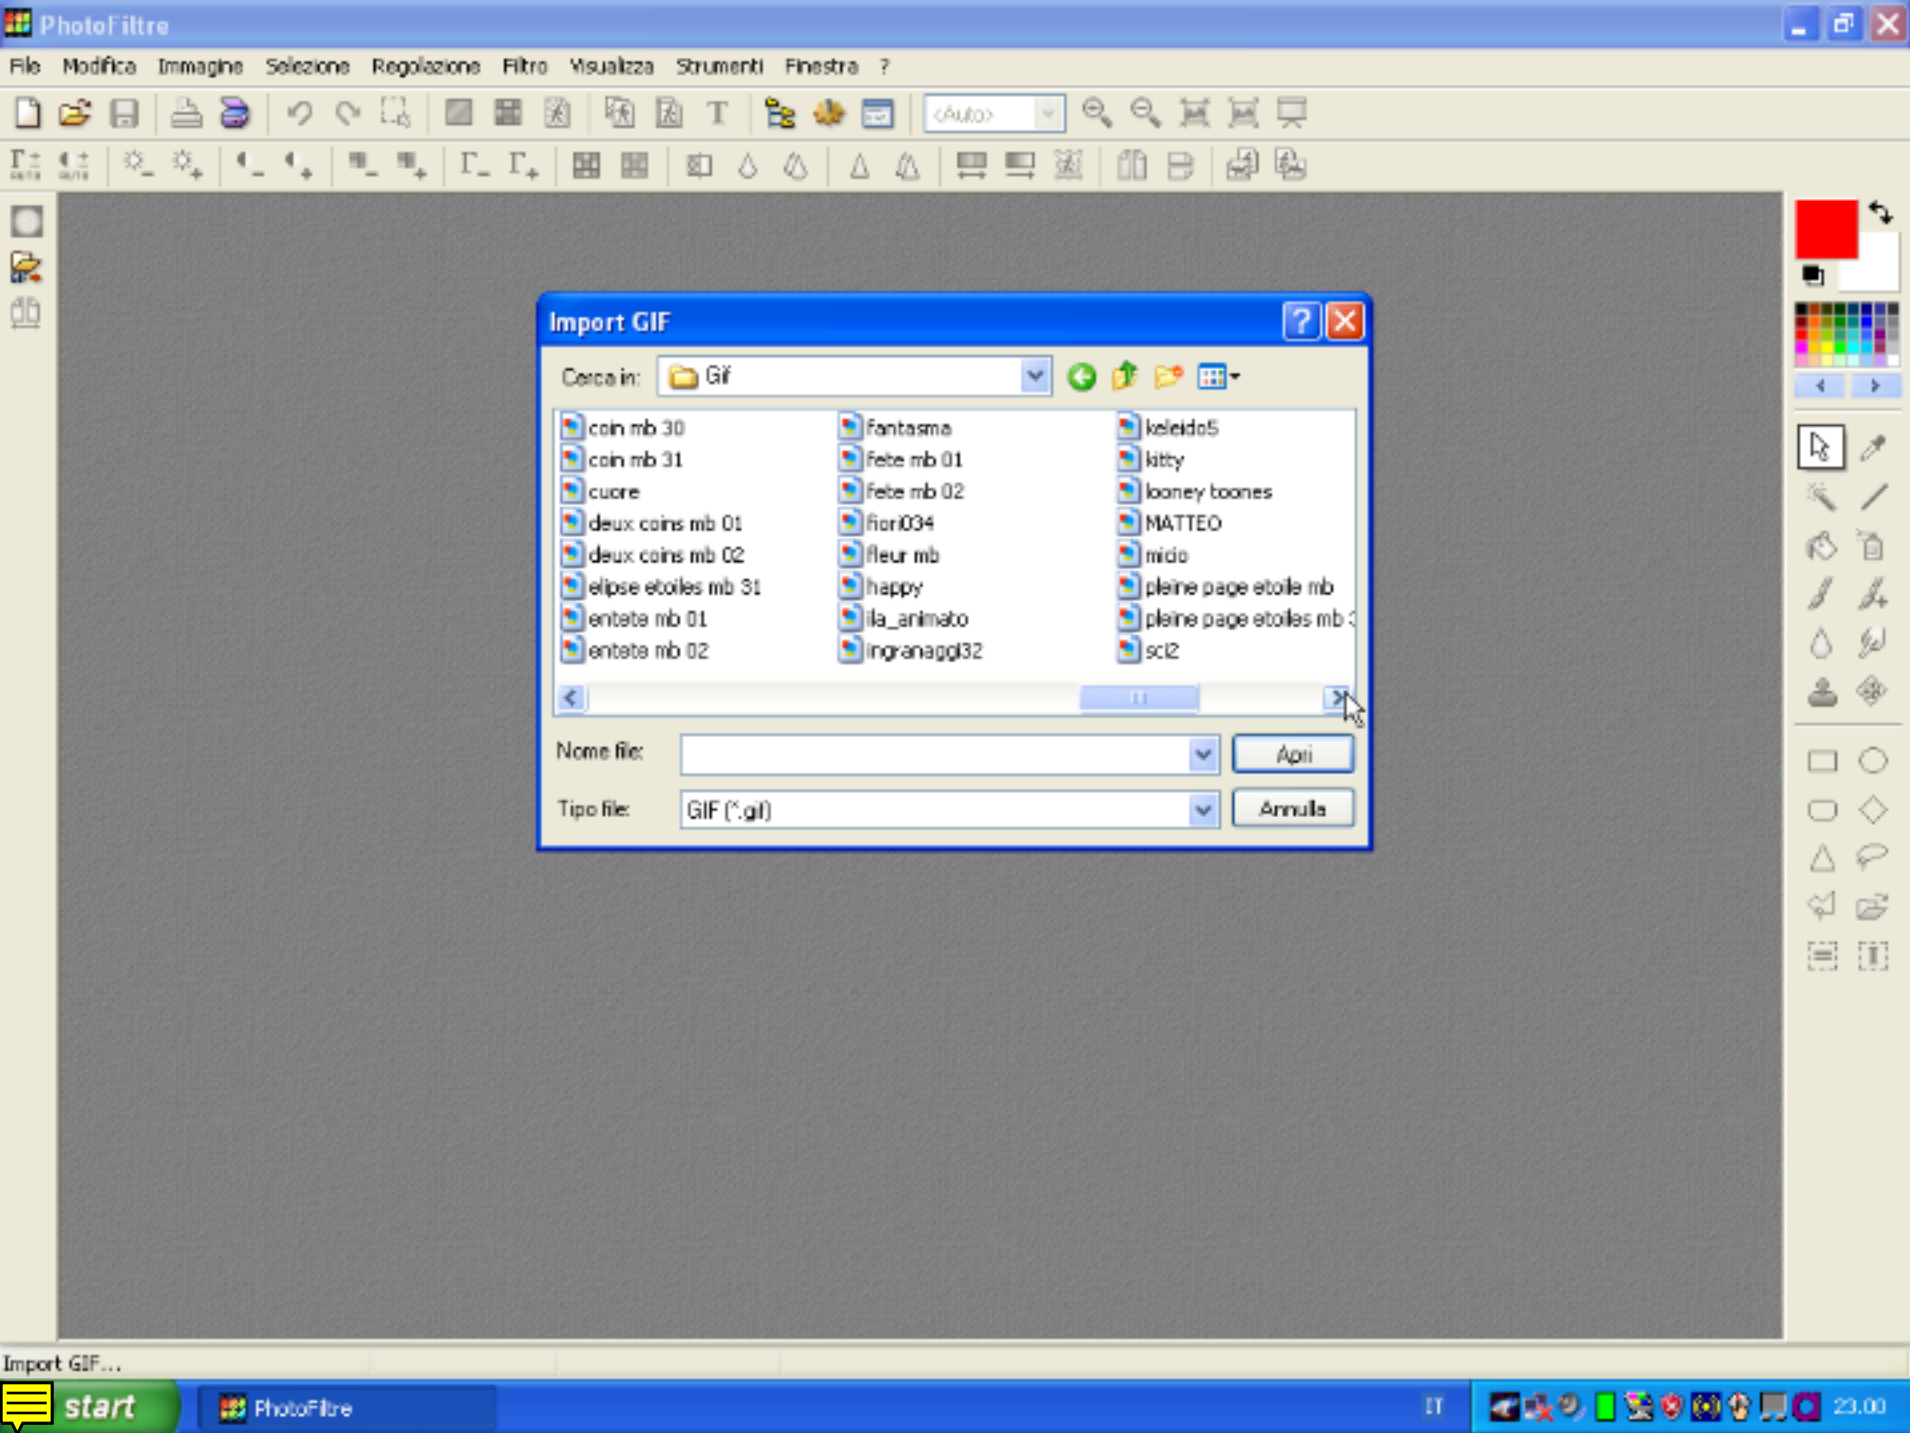

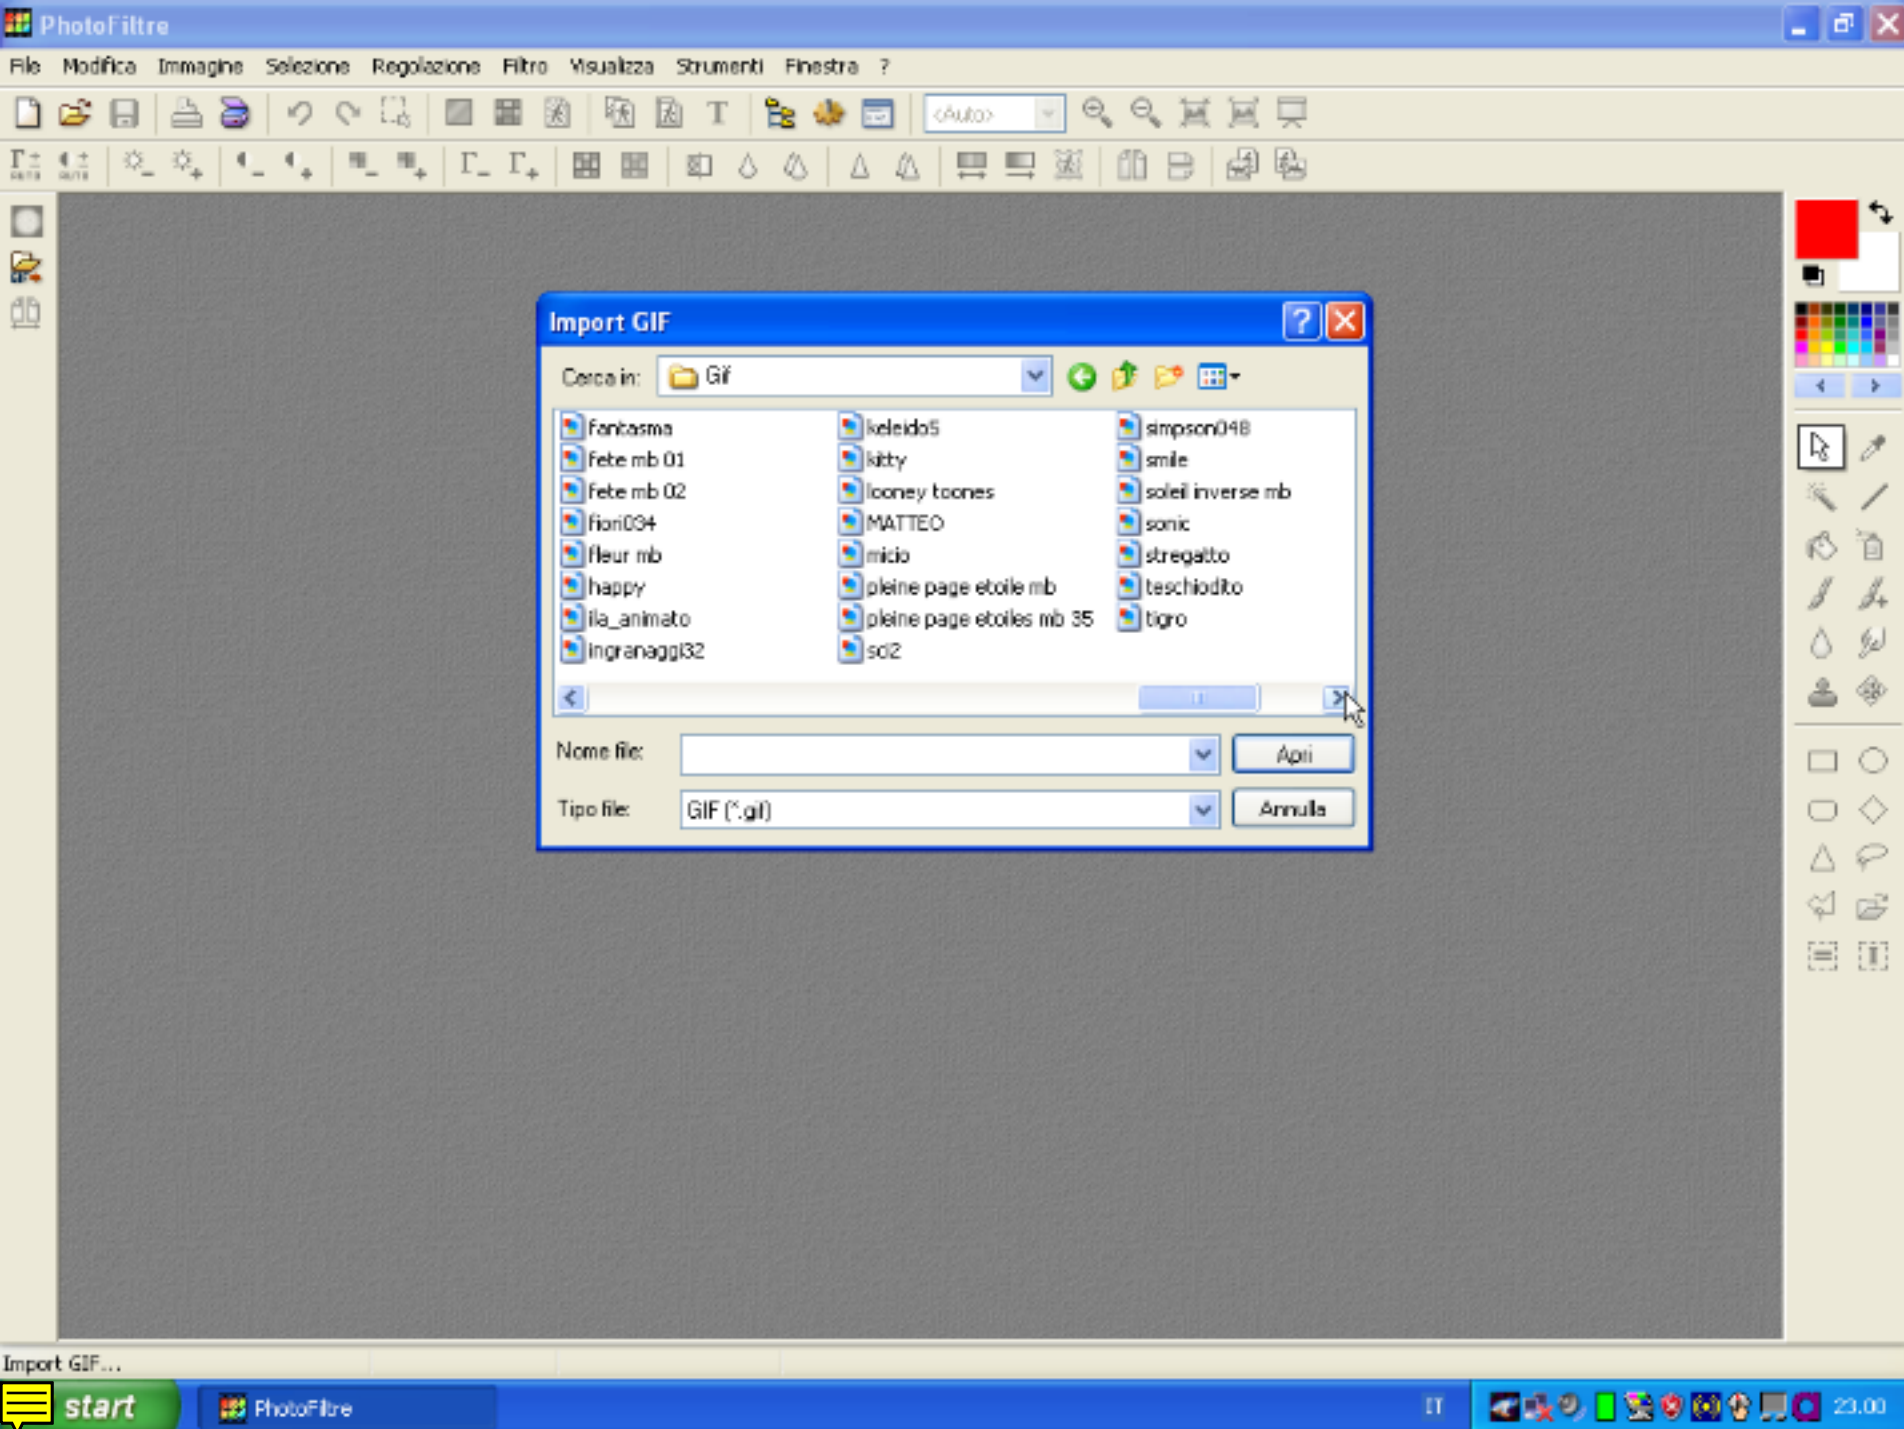

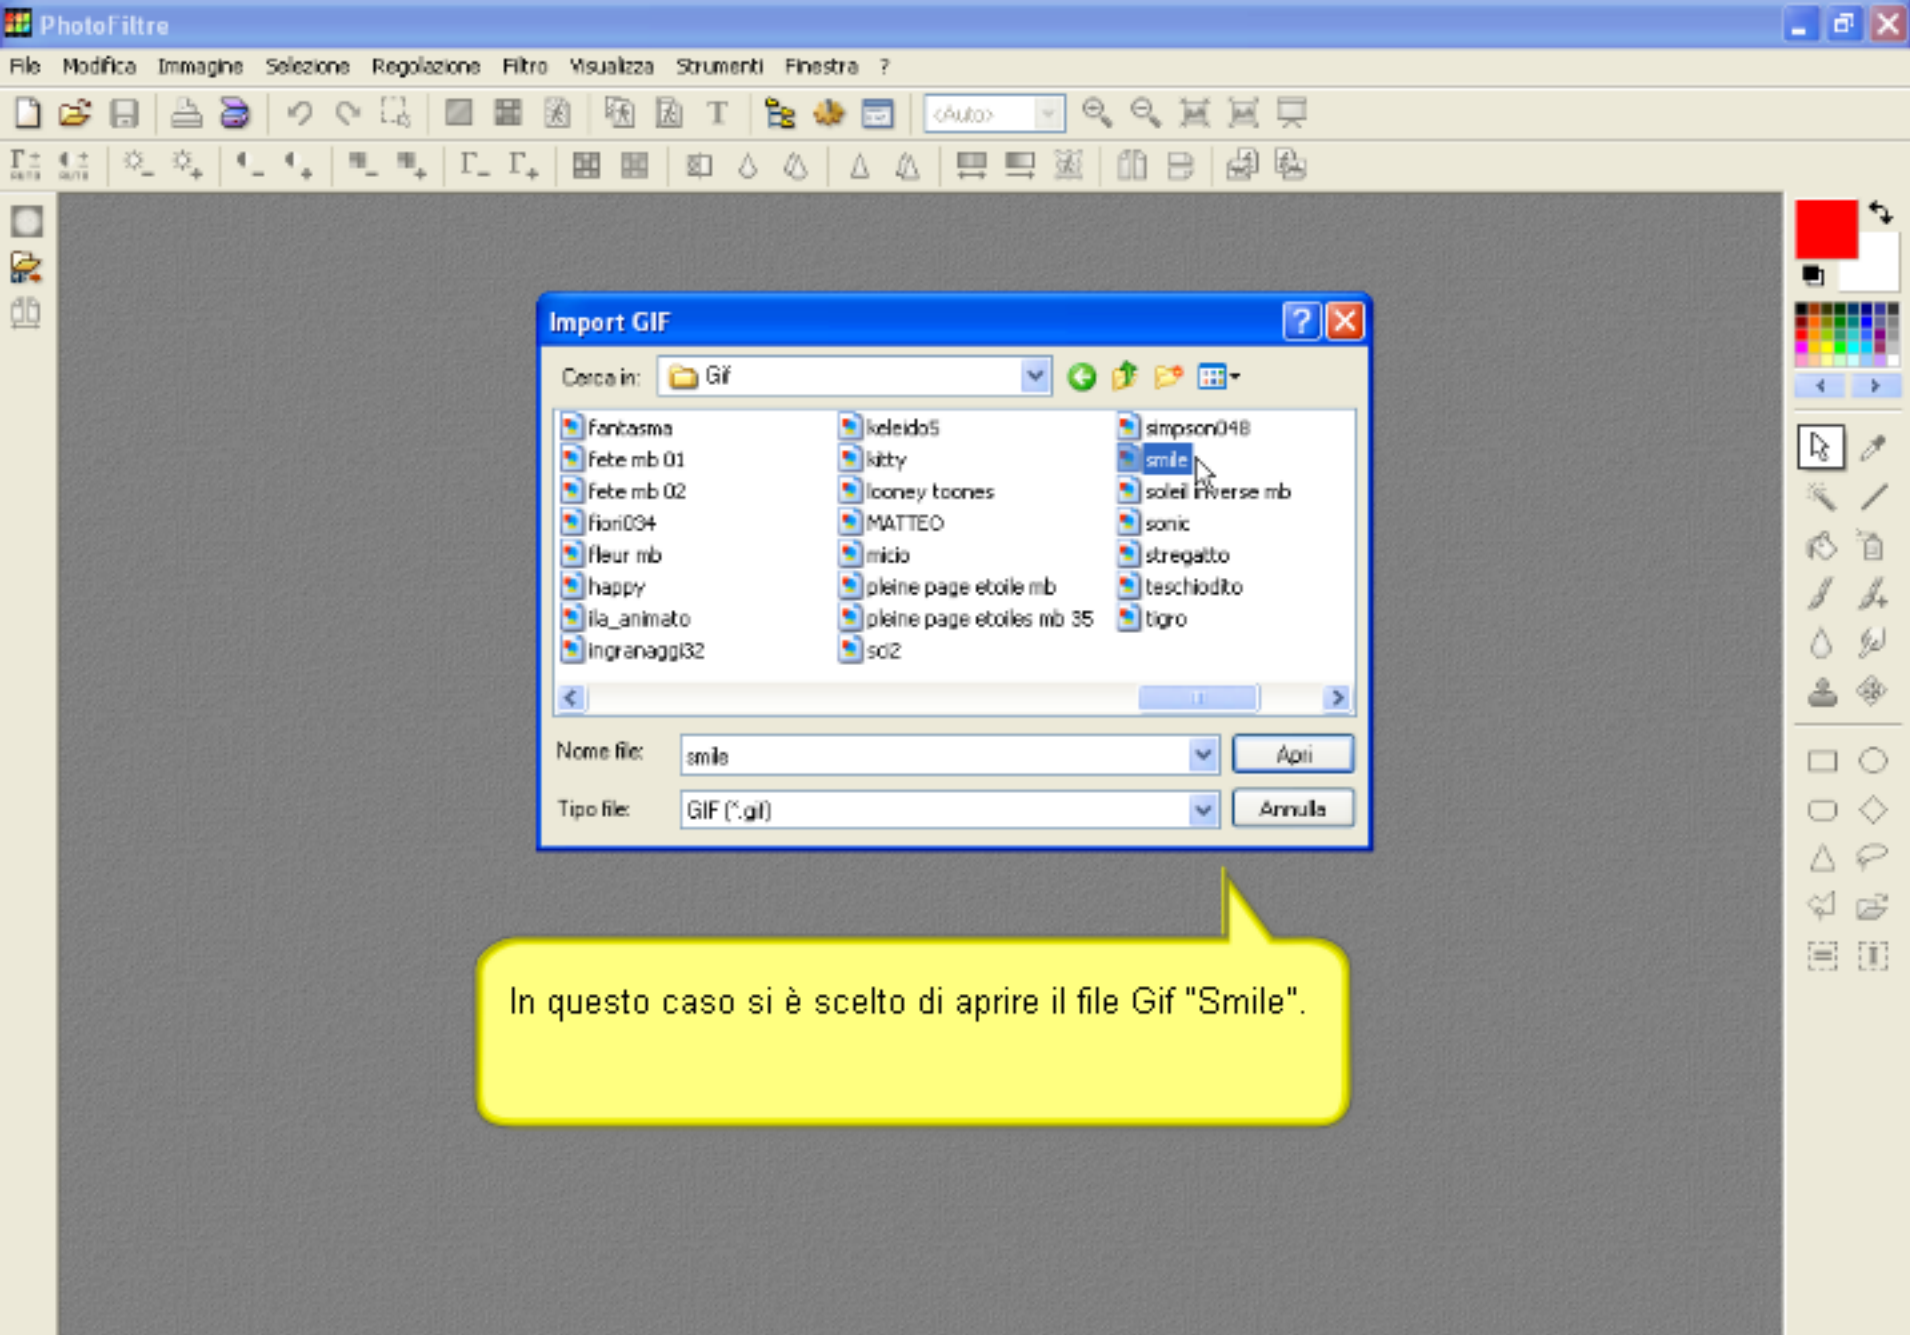

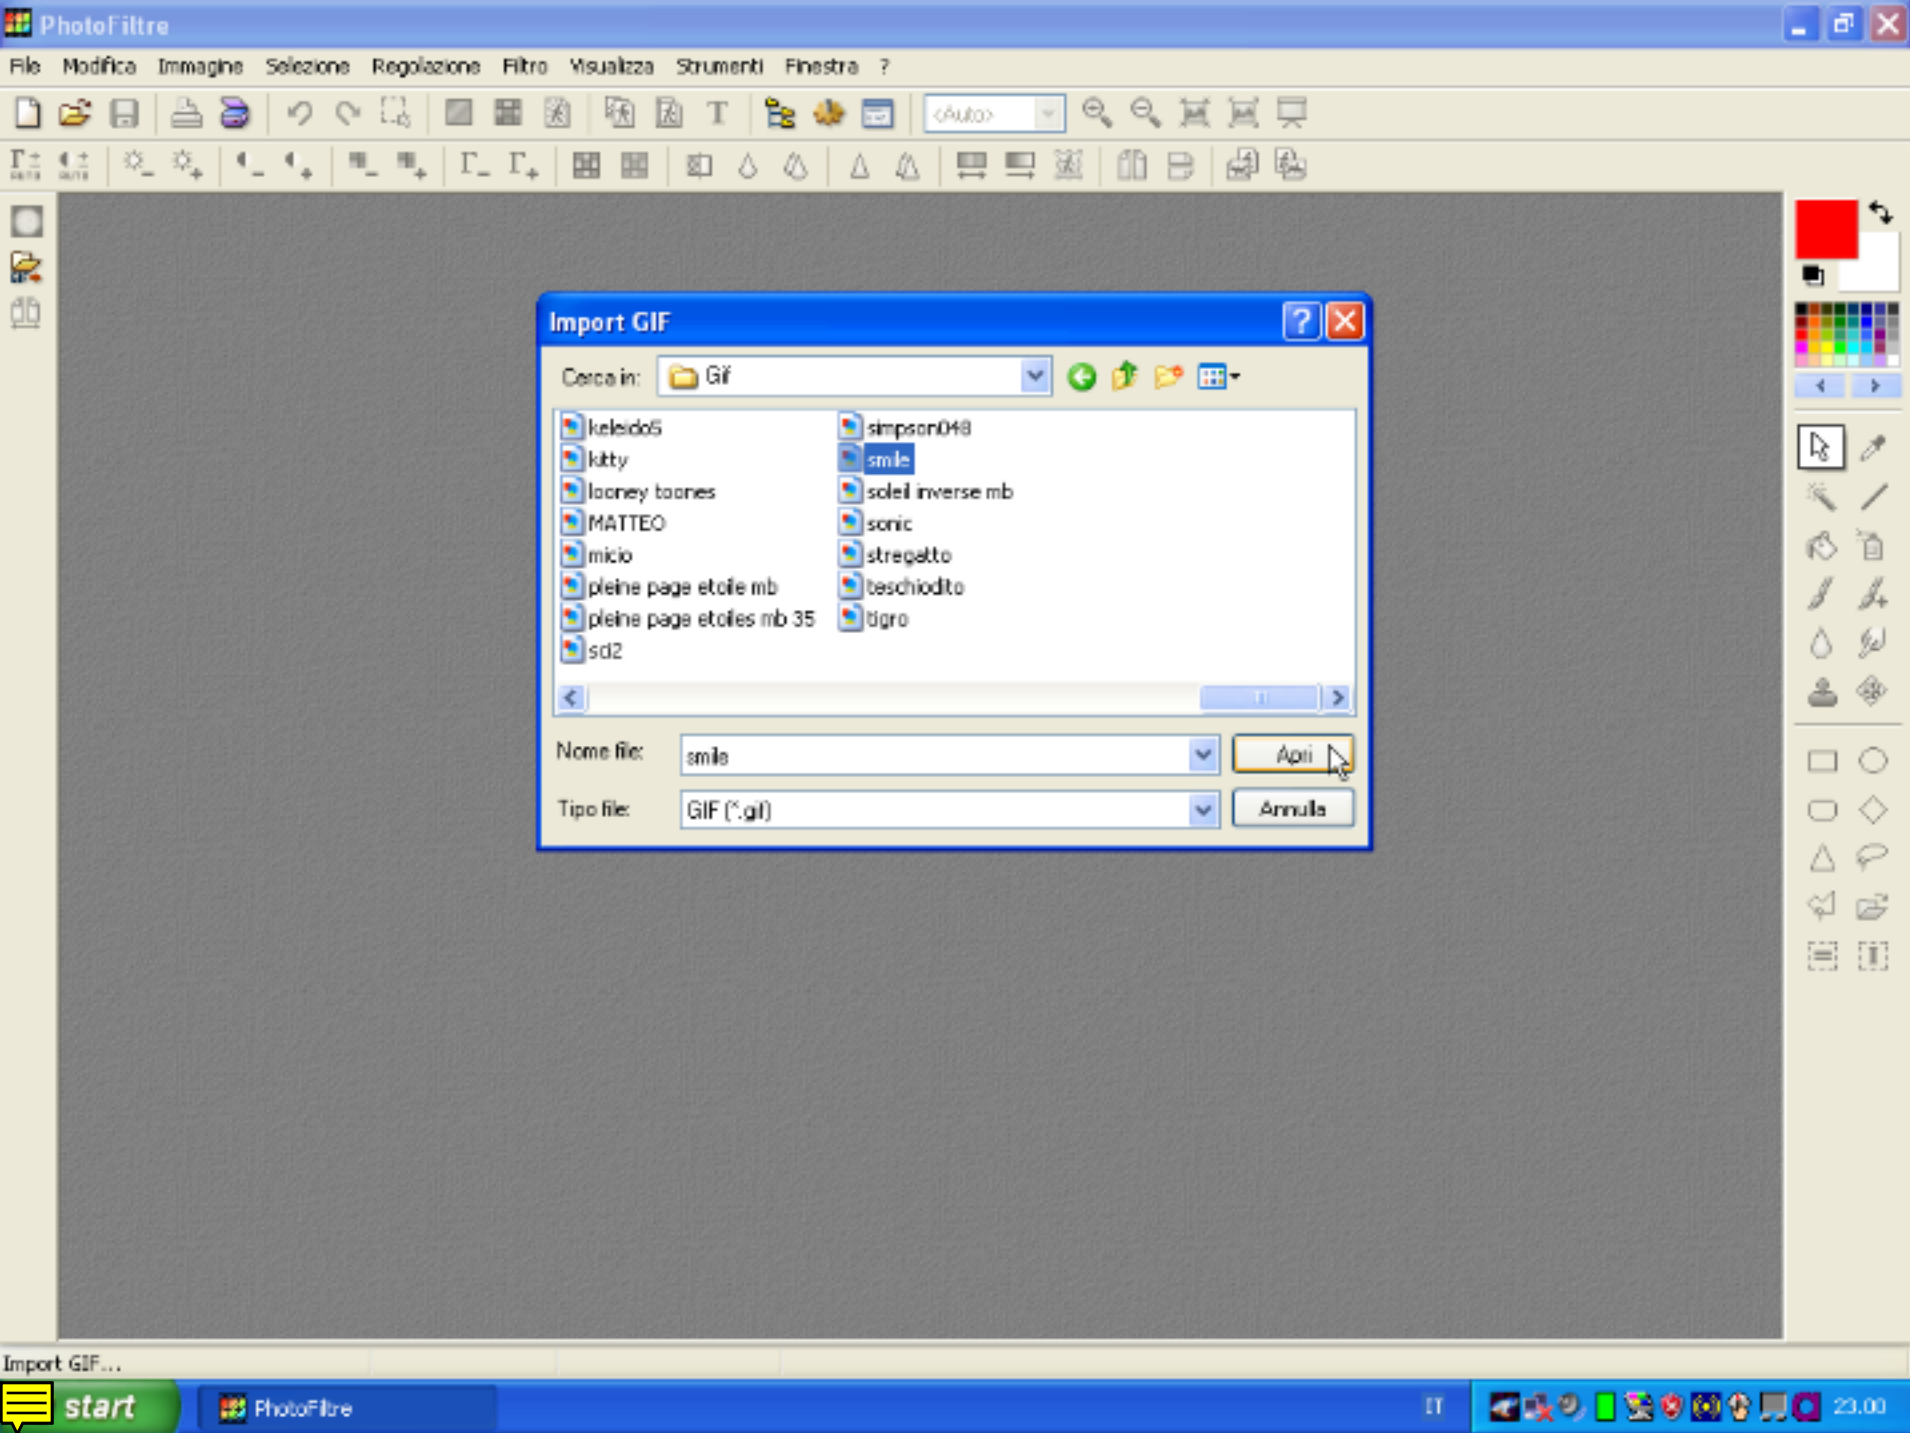

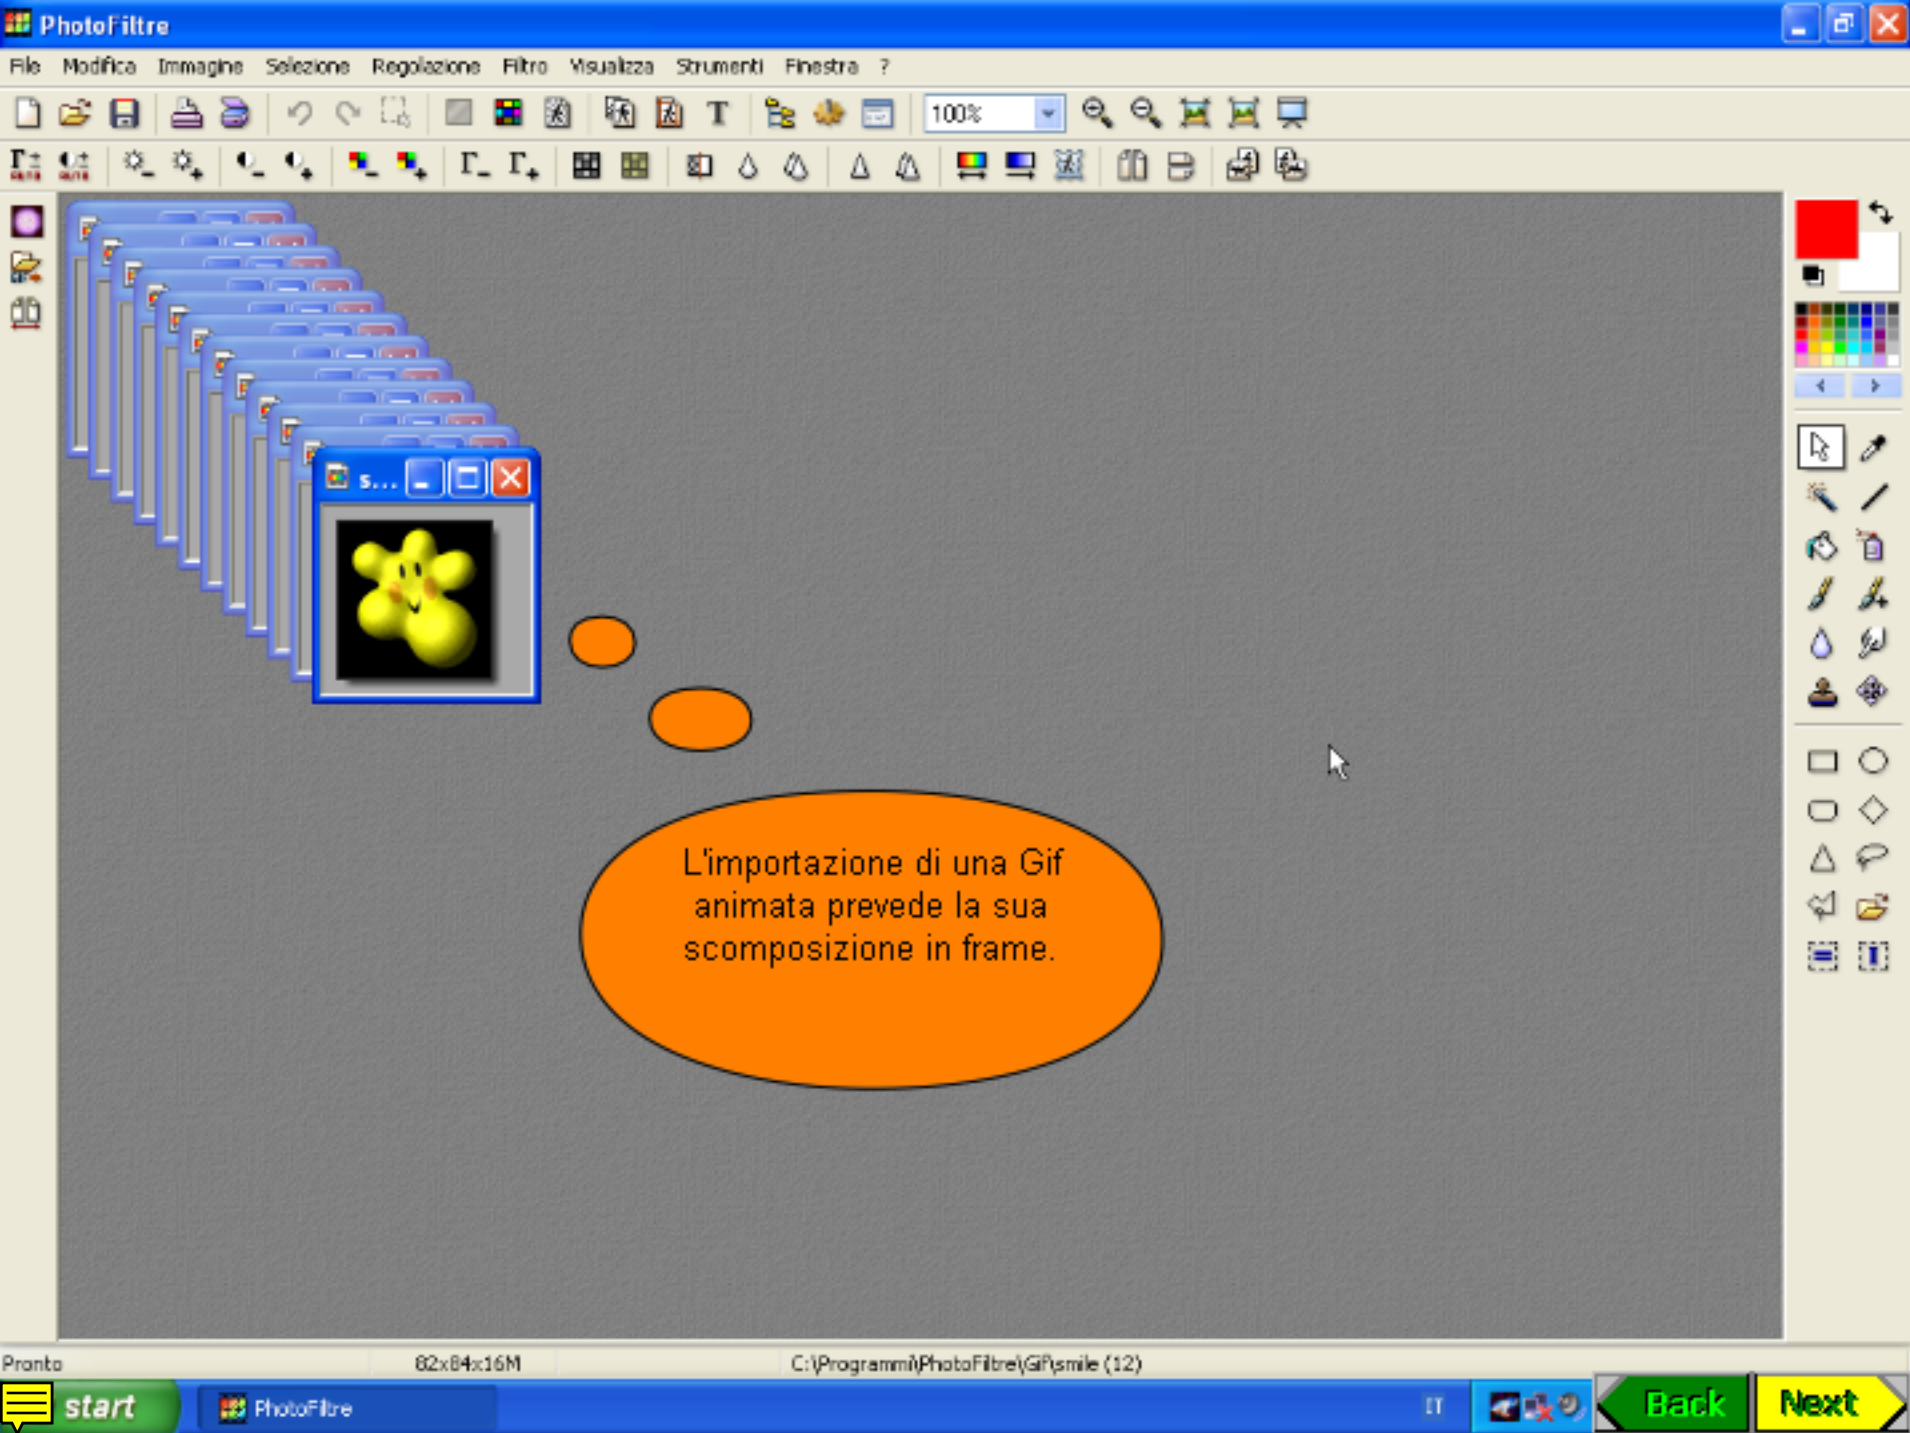

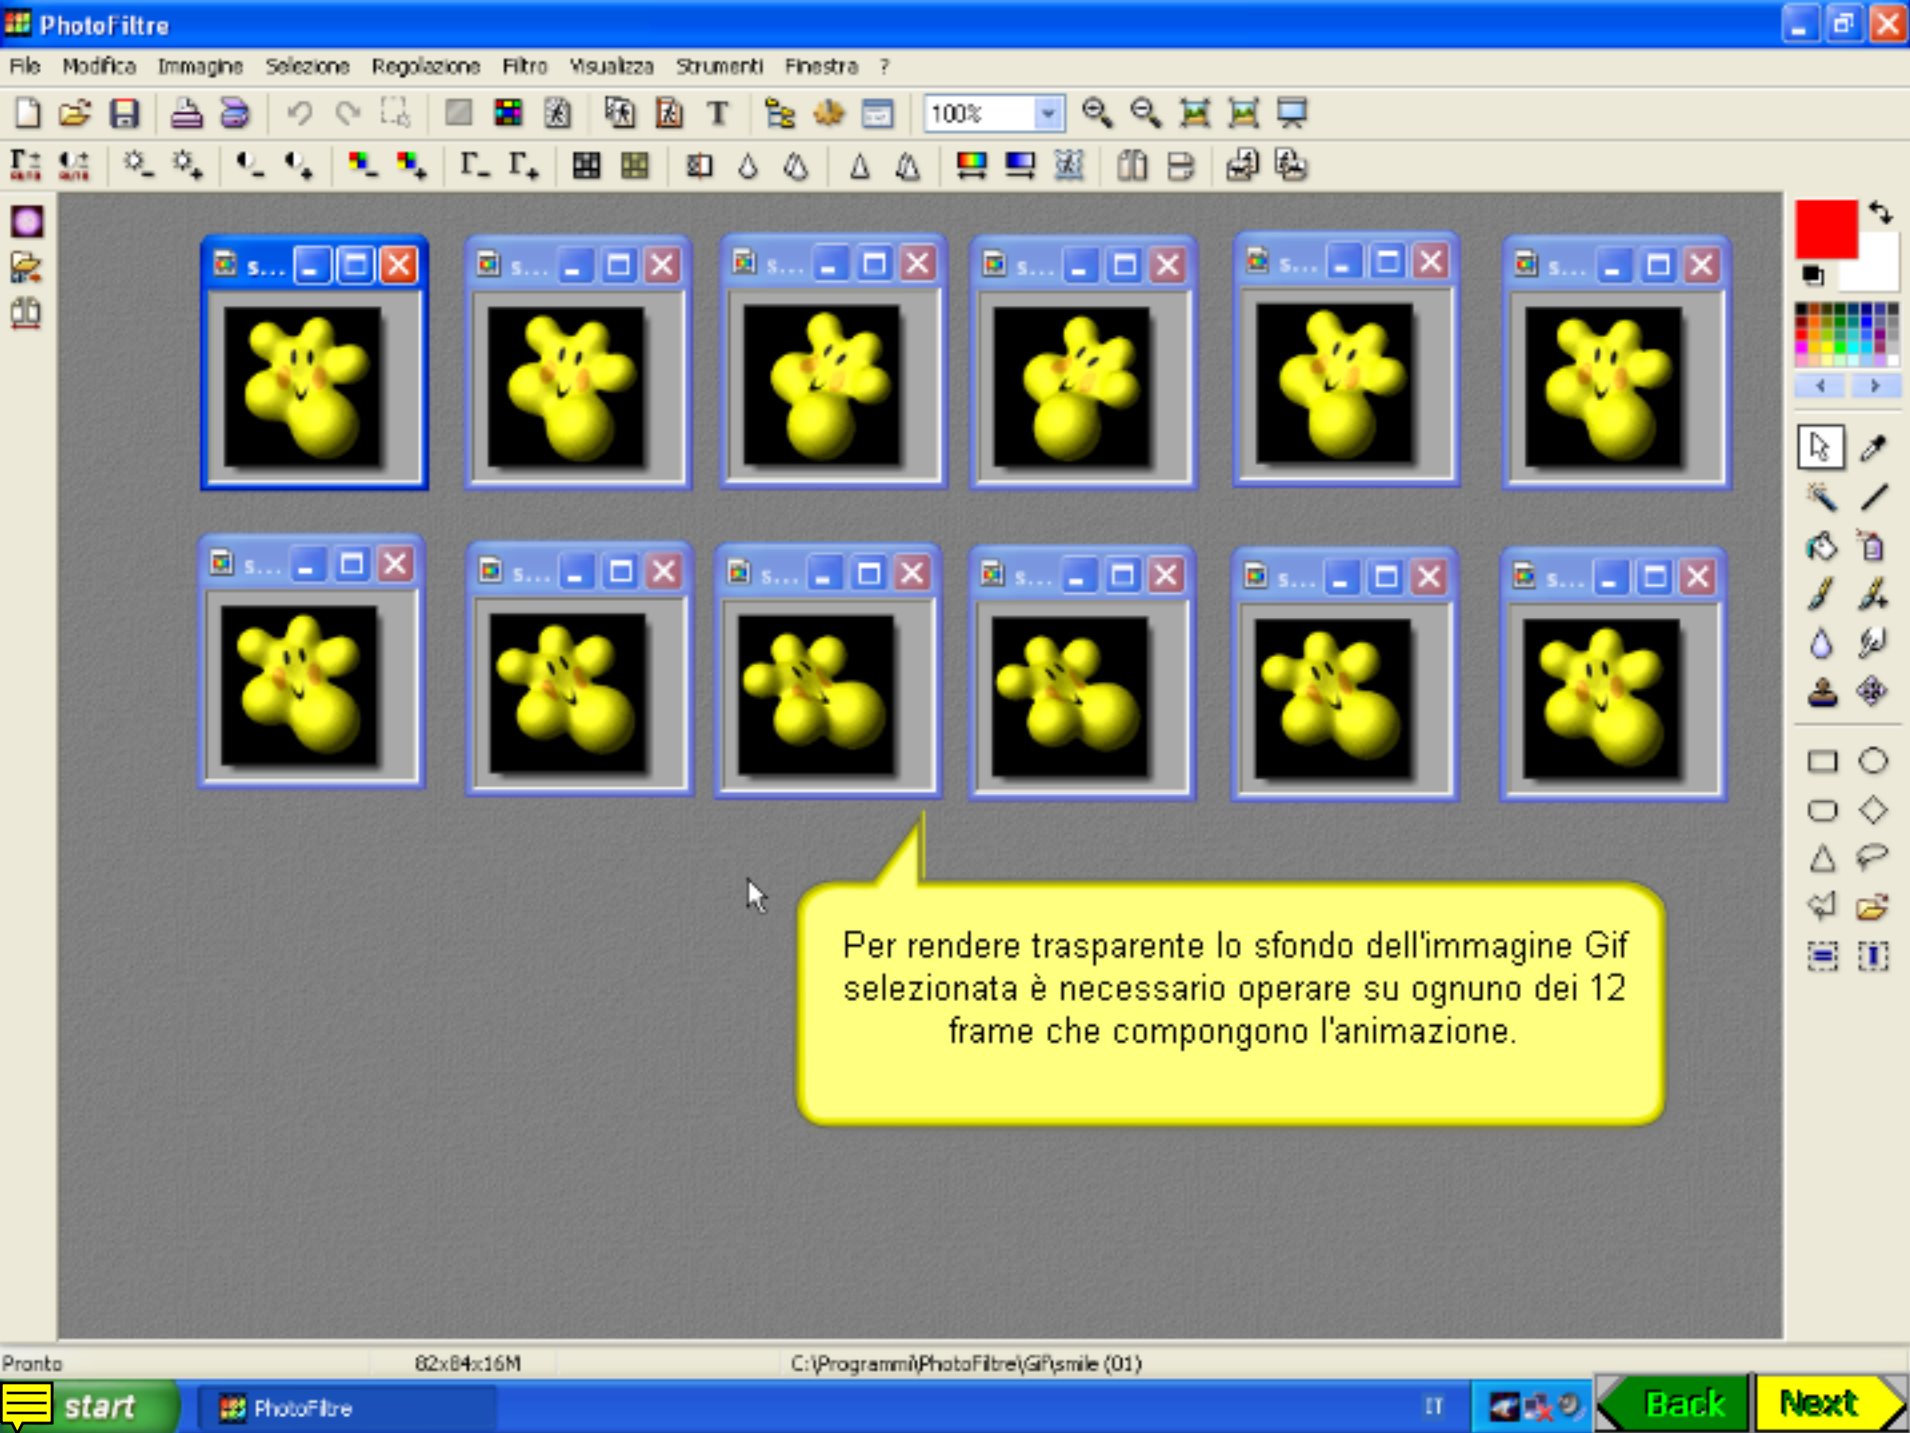

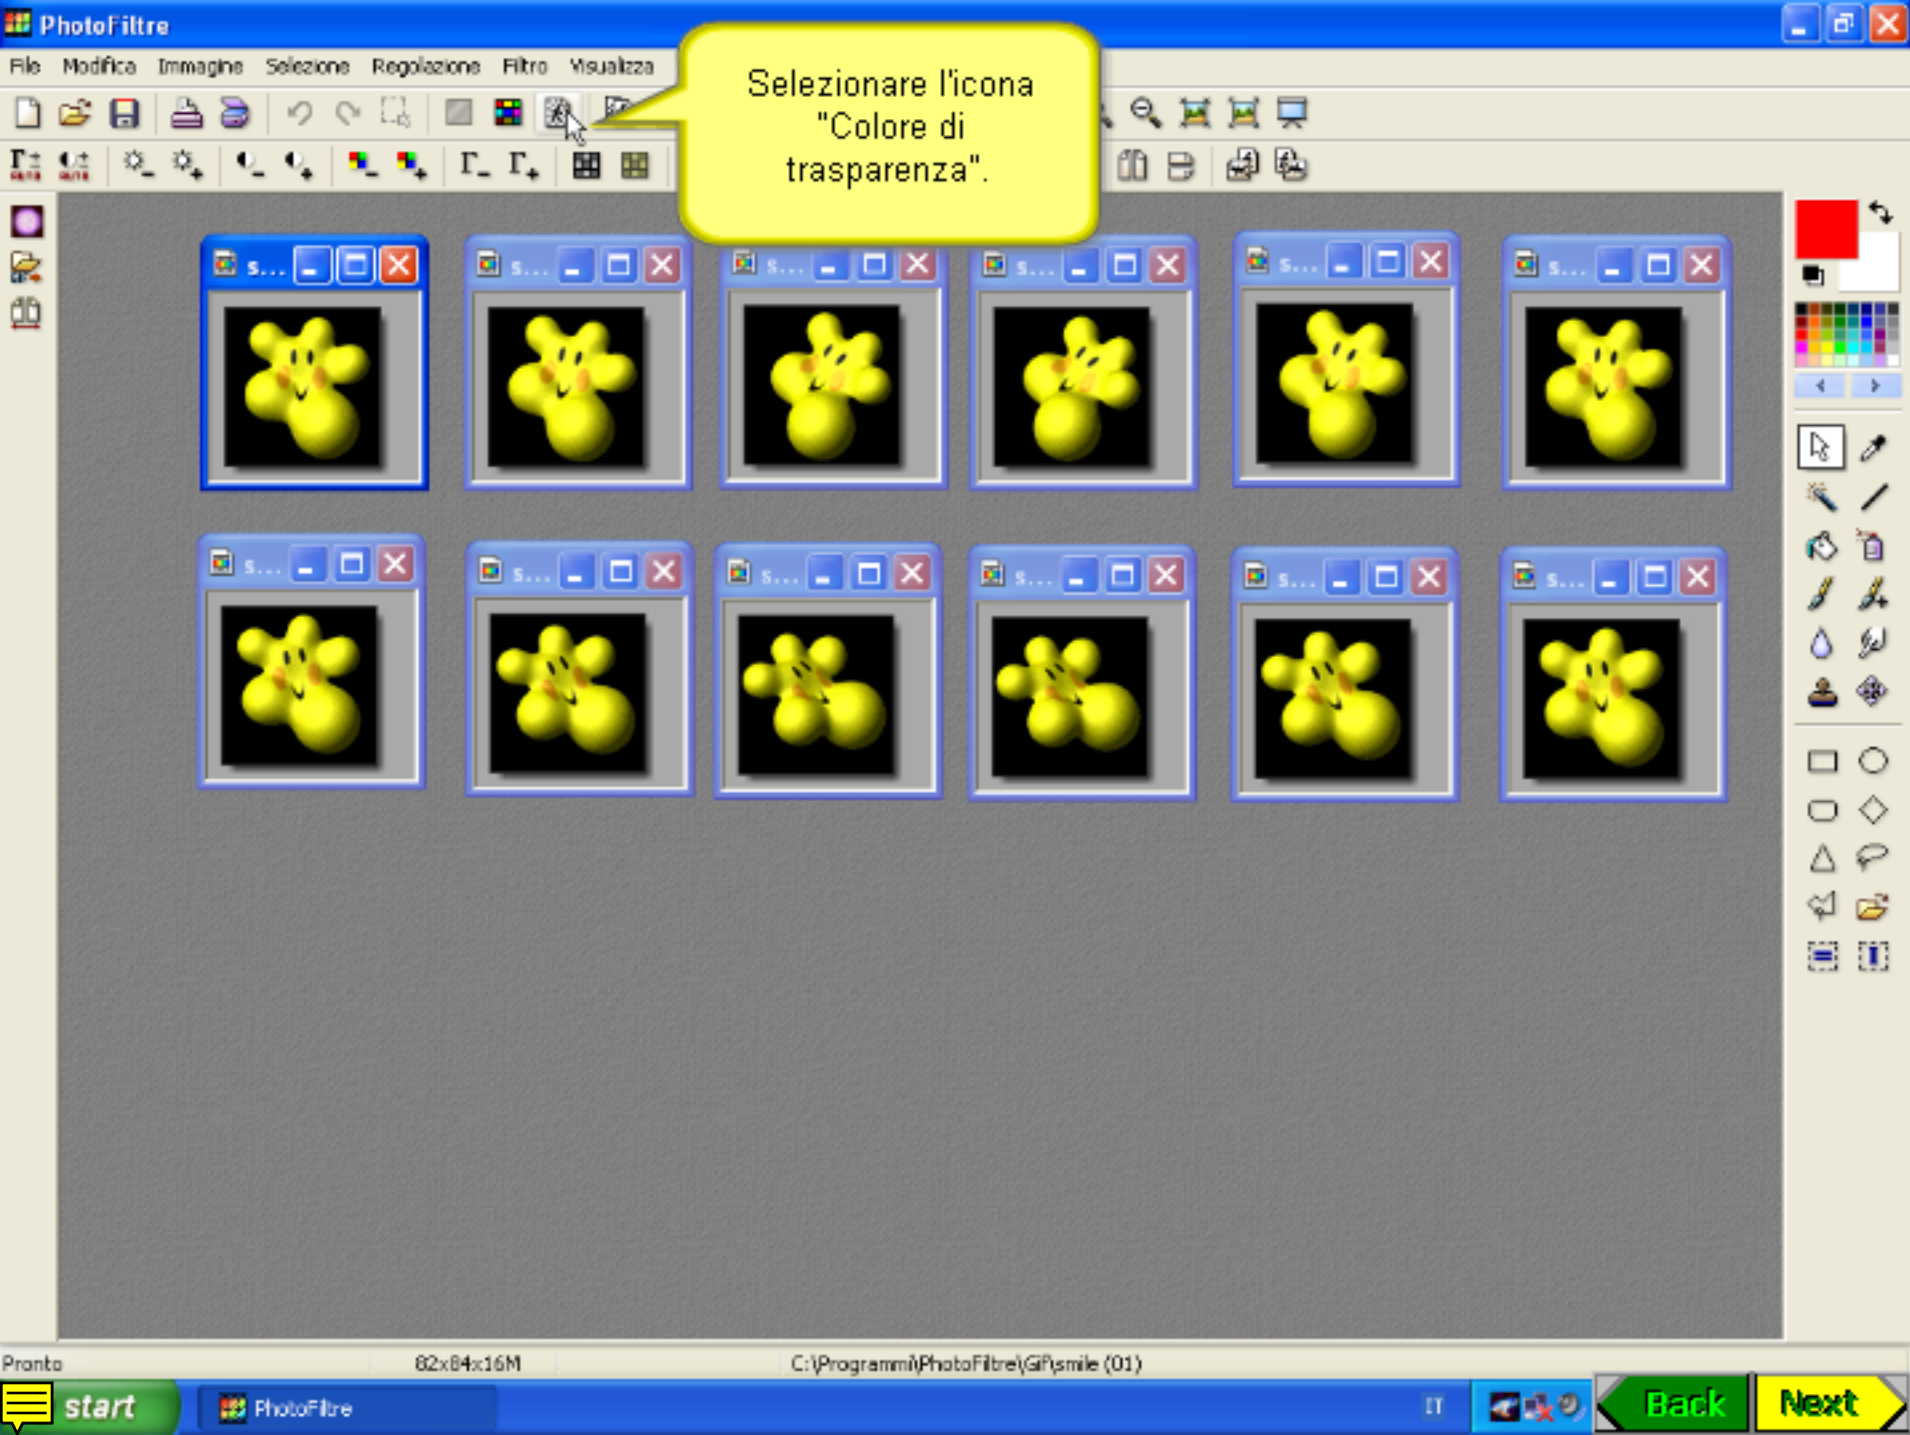

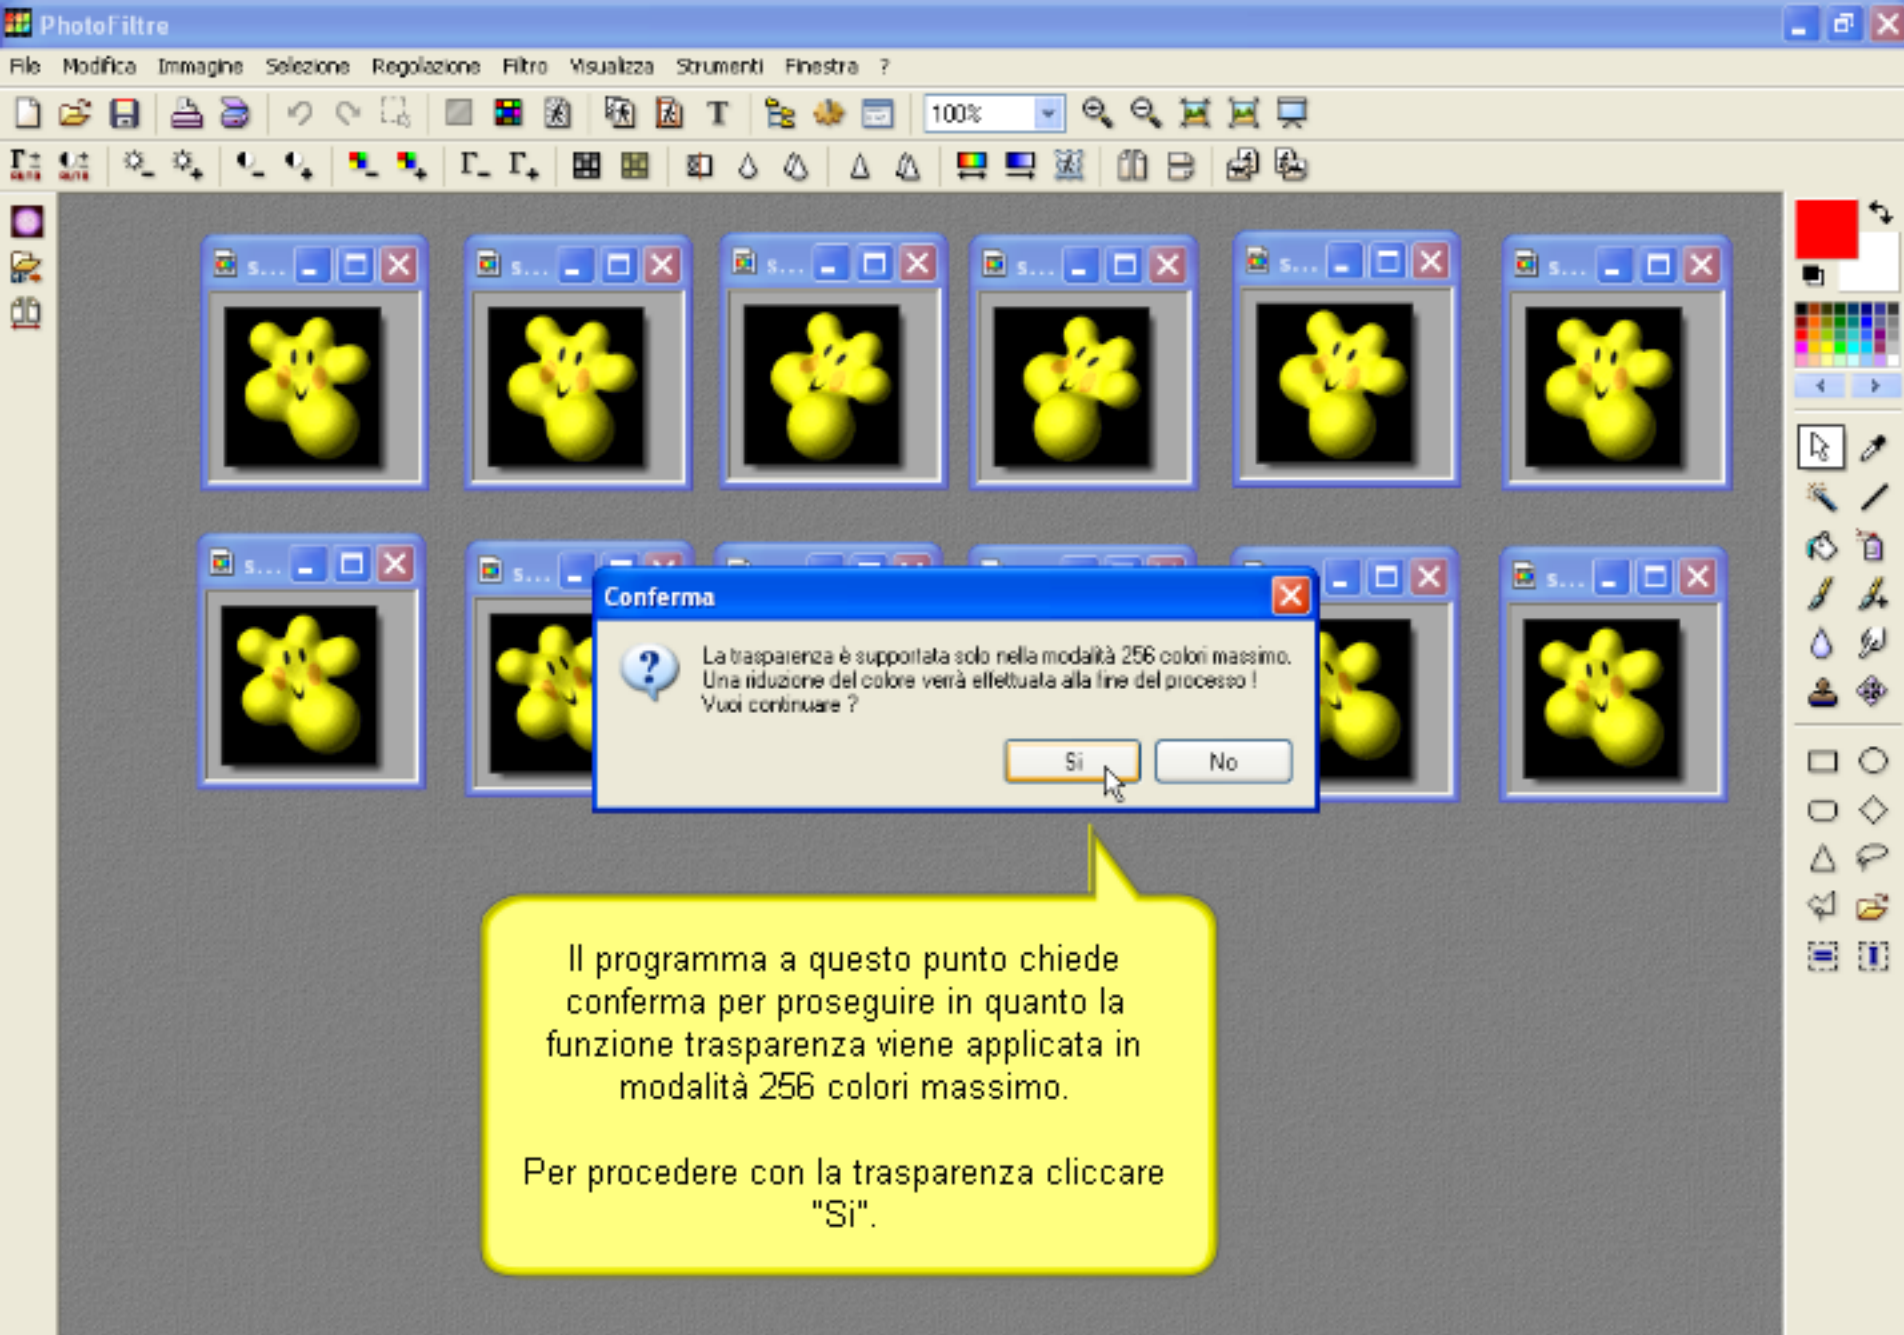

Per rendere trasparente lo sfondo dell'immagine Gif selezionata è necessario operare su ognuno dei 12 frame che compongono l'animazione.

Conferma

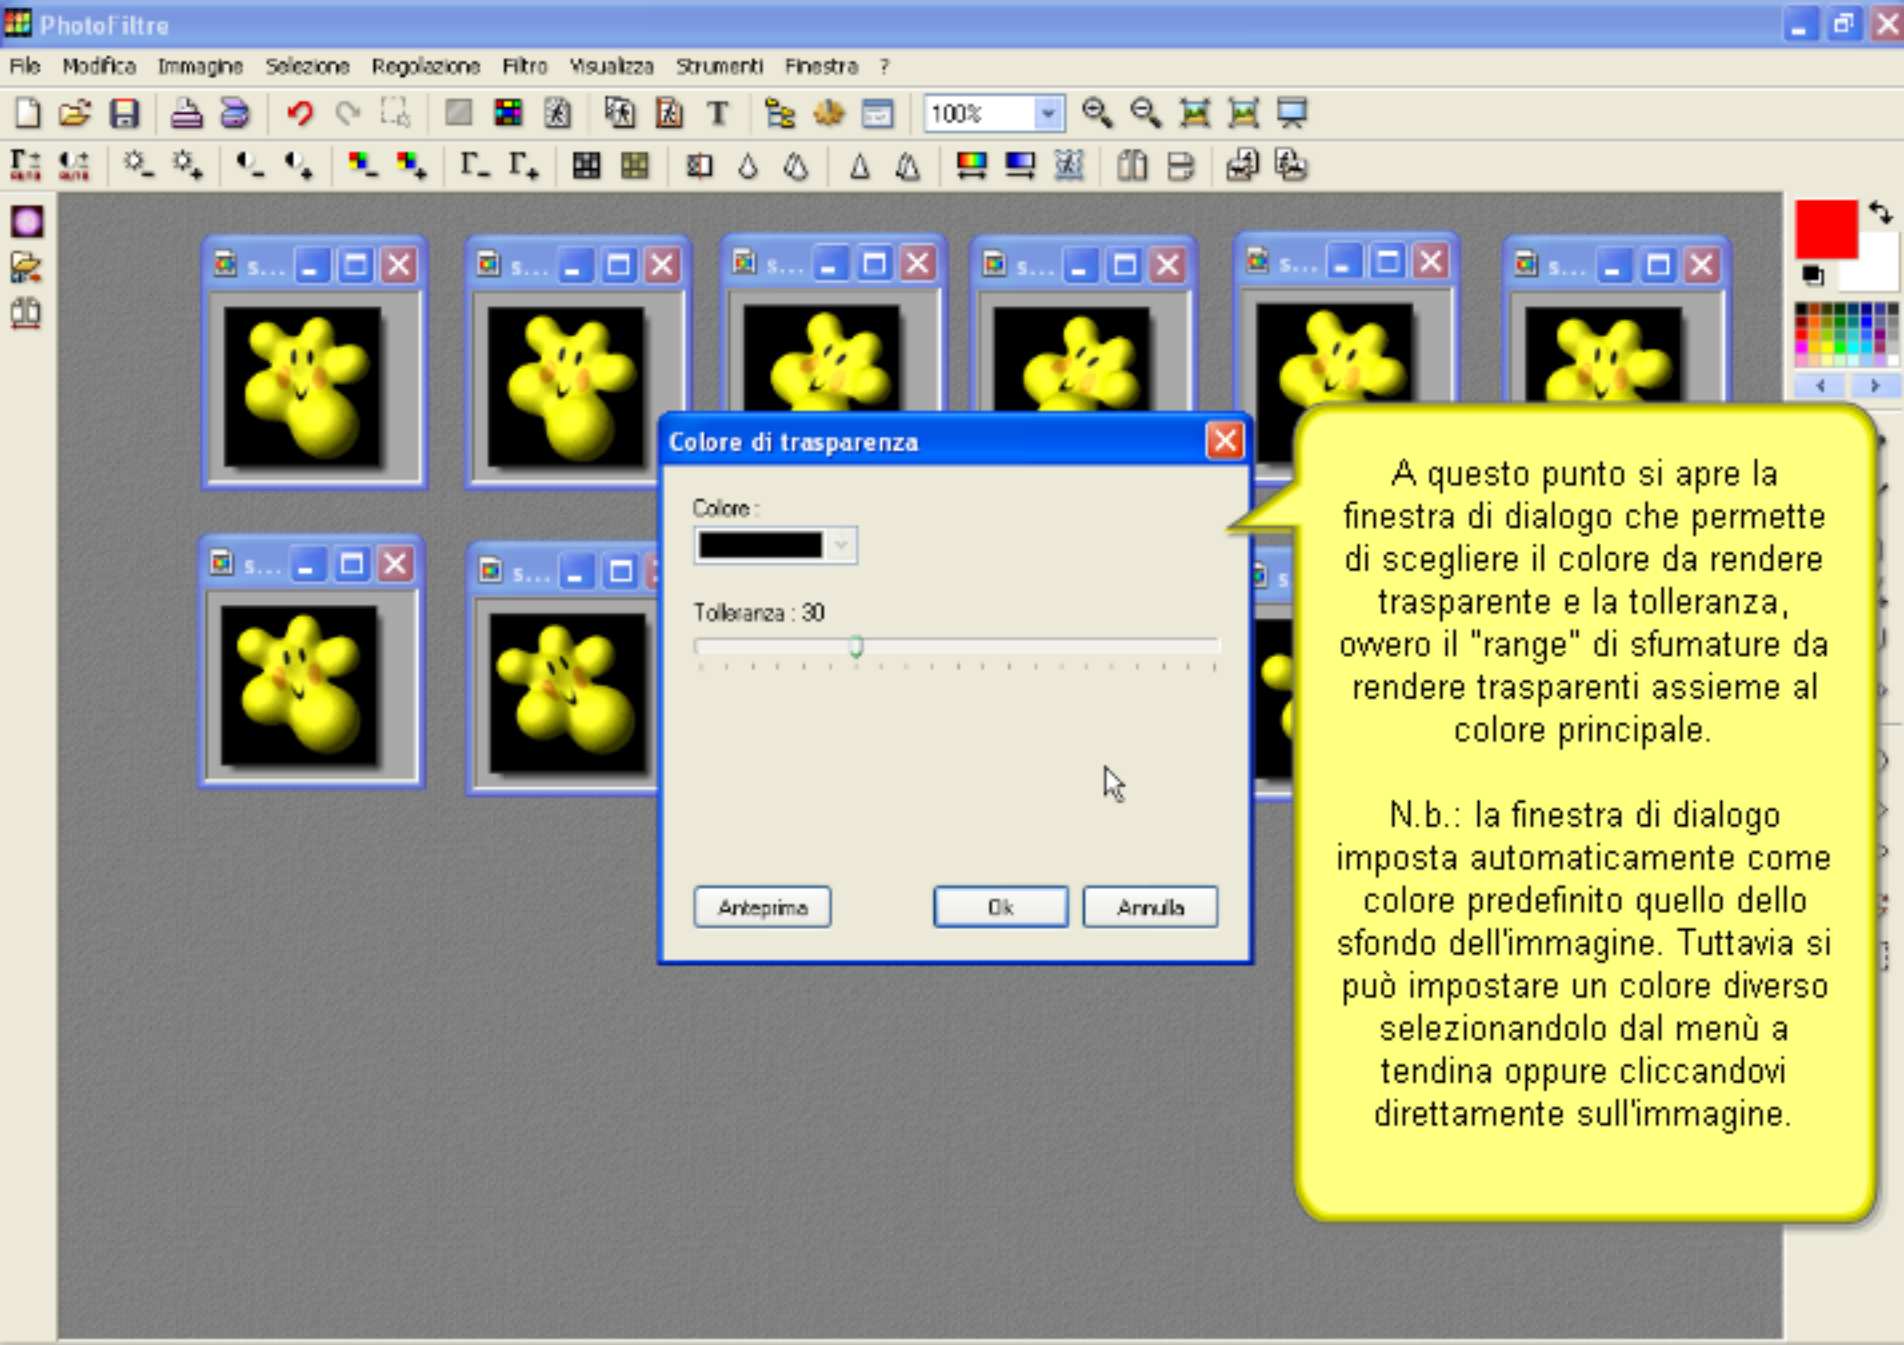

La trasparenza è supportata solo nella modalità 256 colori massimo.
Una riduzione del colore verrà effettuata alla fine del processo !
Vuoi continuare ?

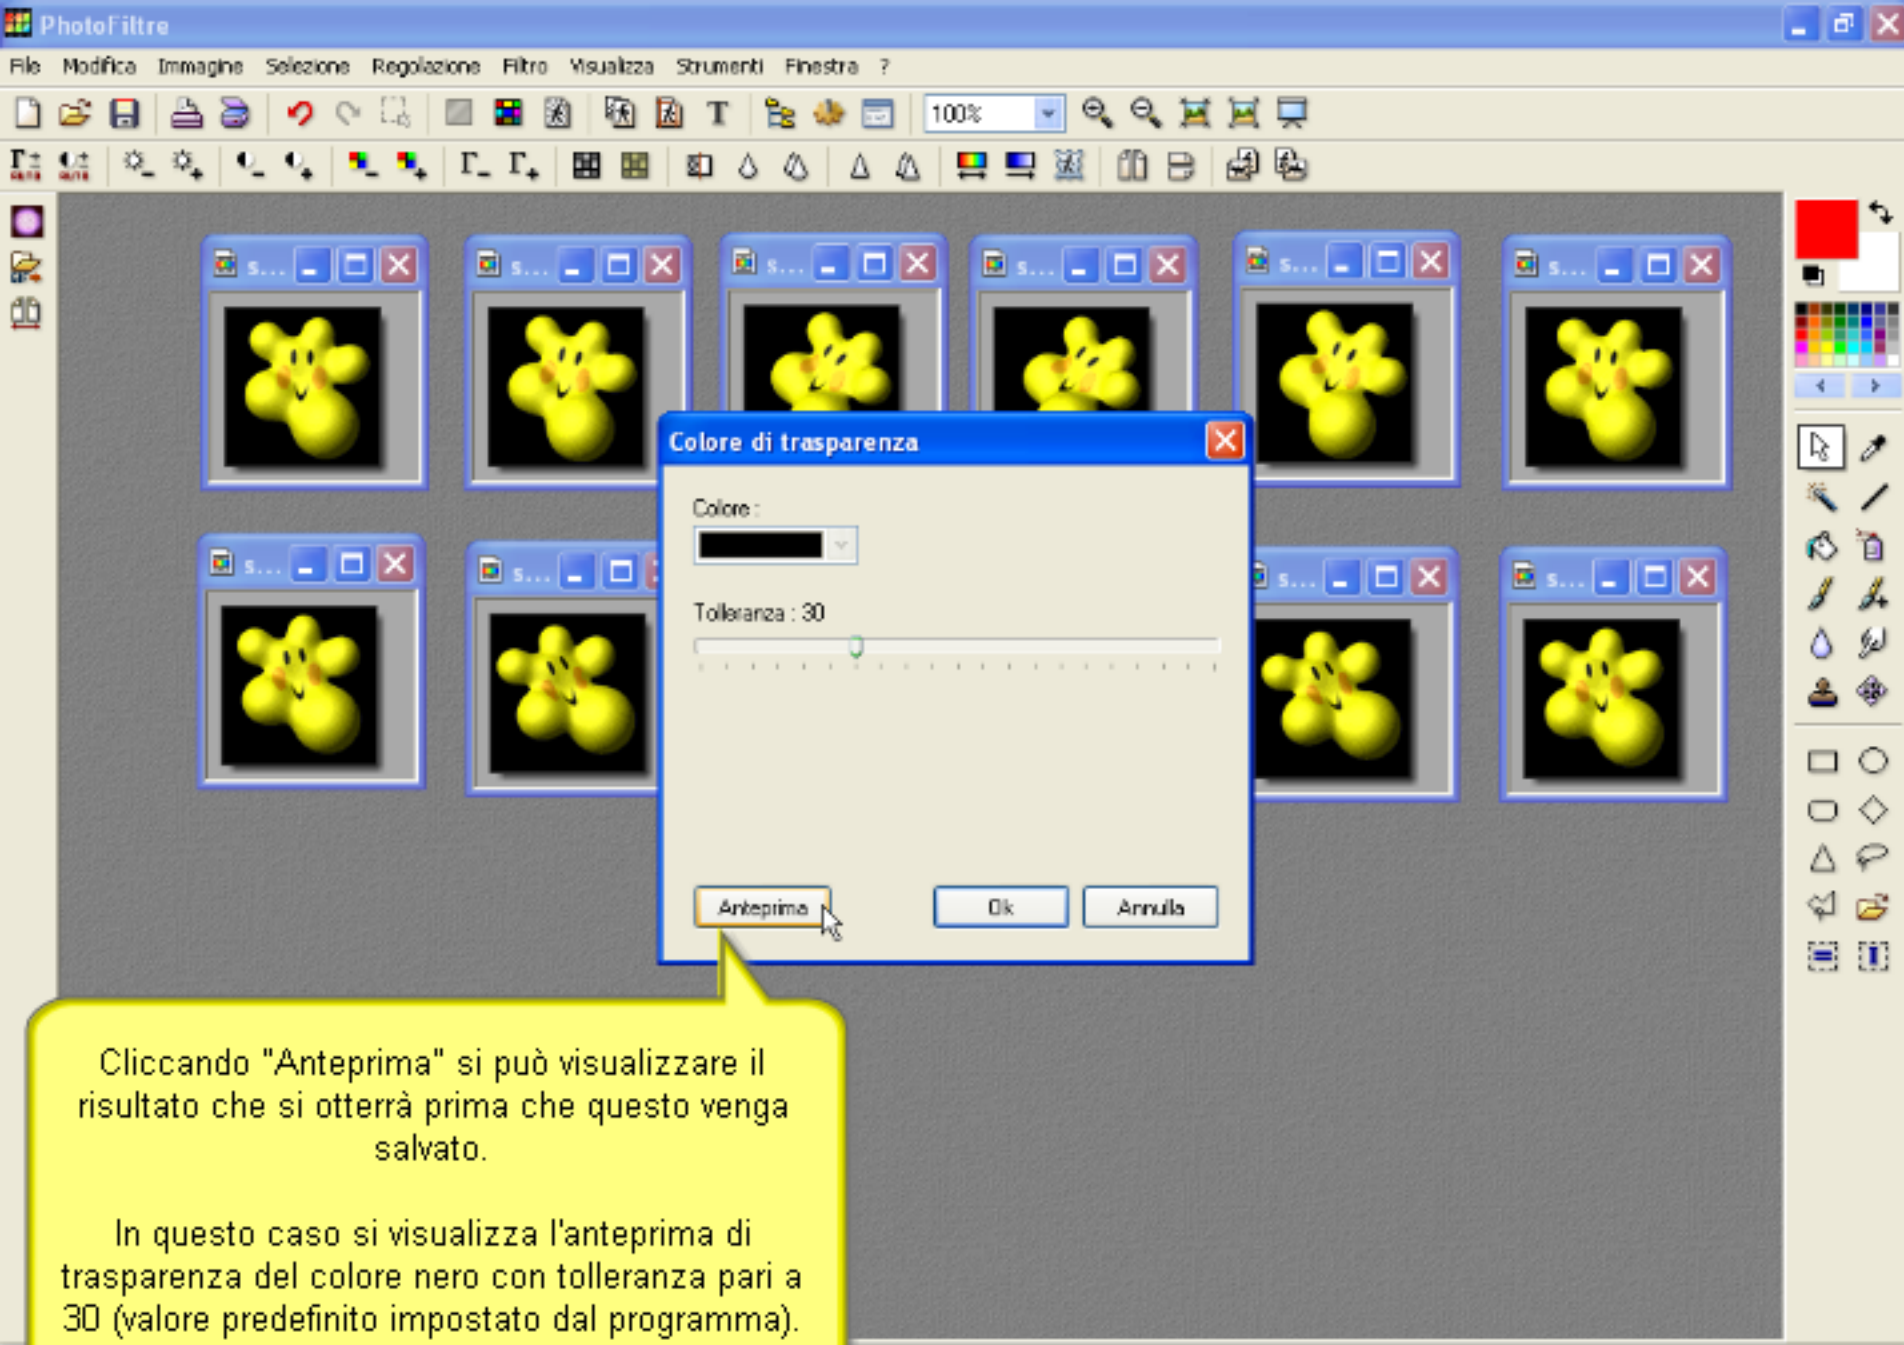

Si

No

Il programma a questo punto chiede conferma per proseguire in quanto la funzione trasparenza viene applicata in modalità 256 colori massimo.

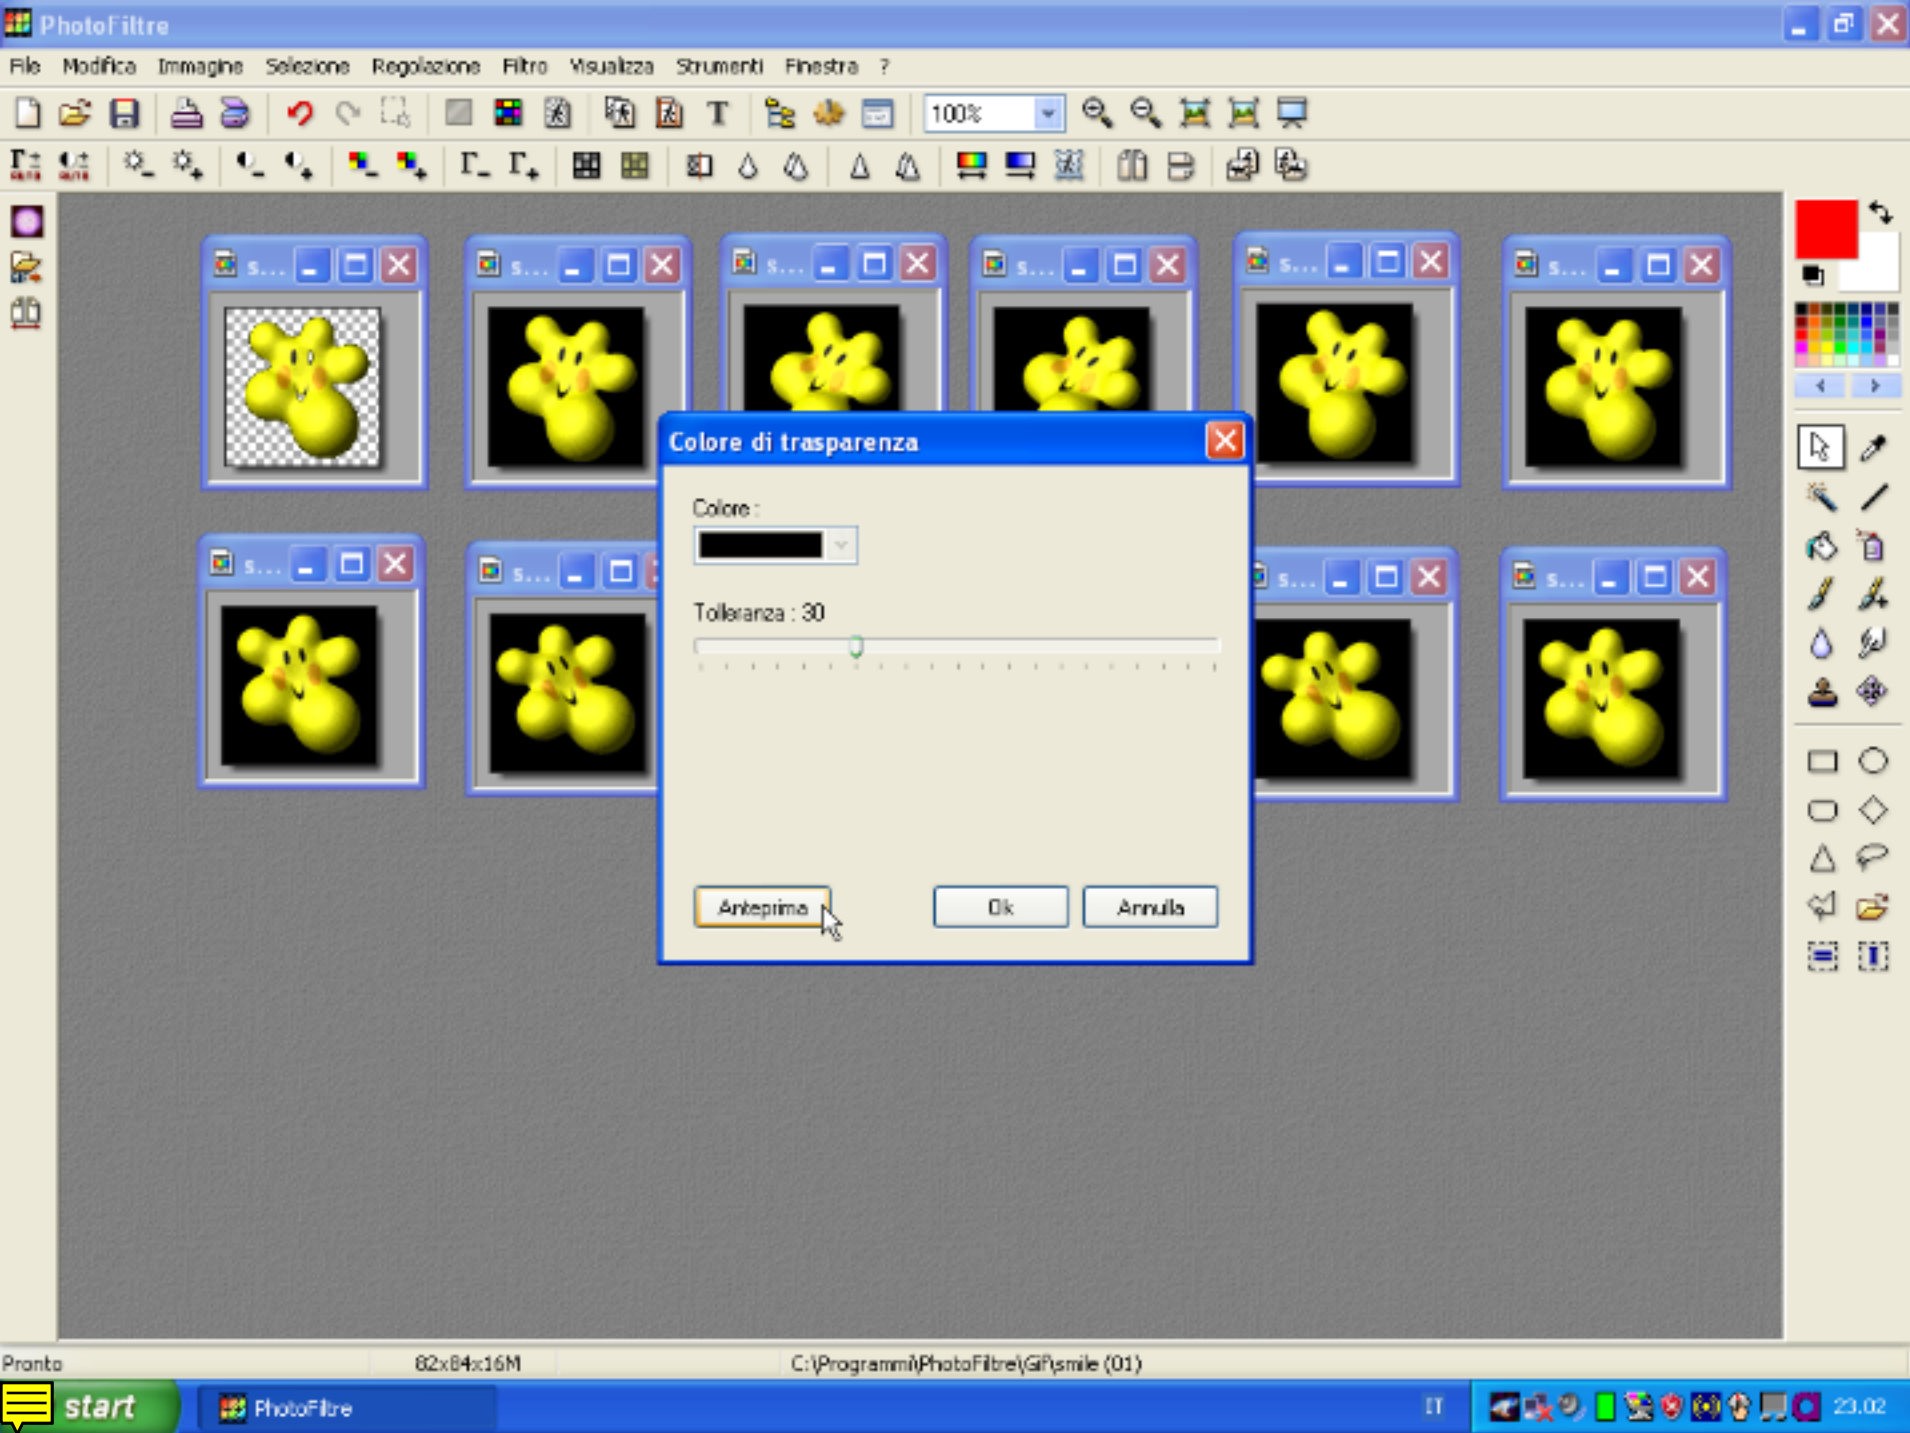

Per procedere con la trasparenza cliccare "Si".

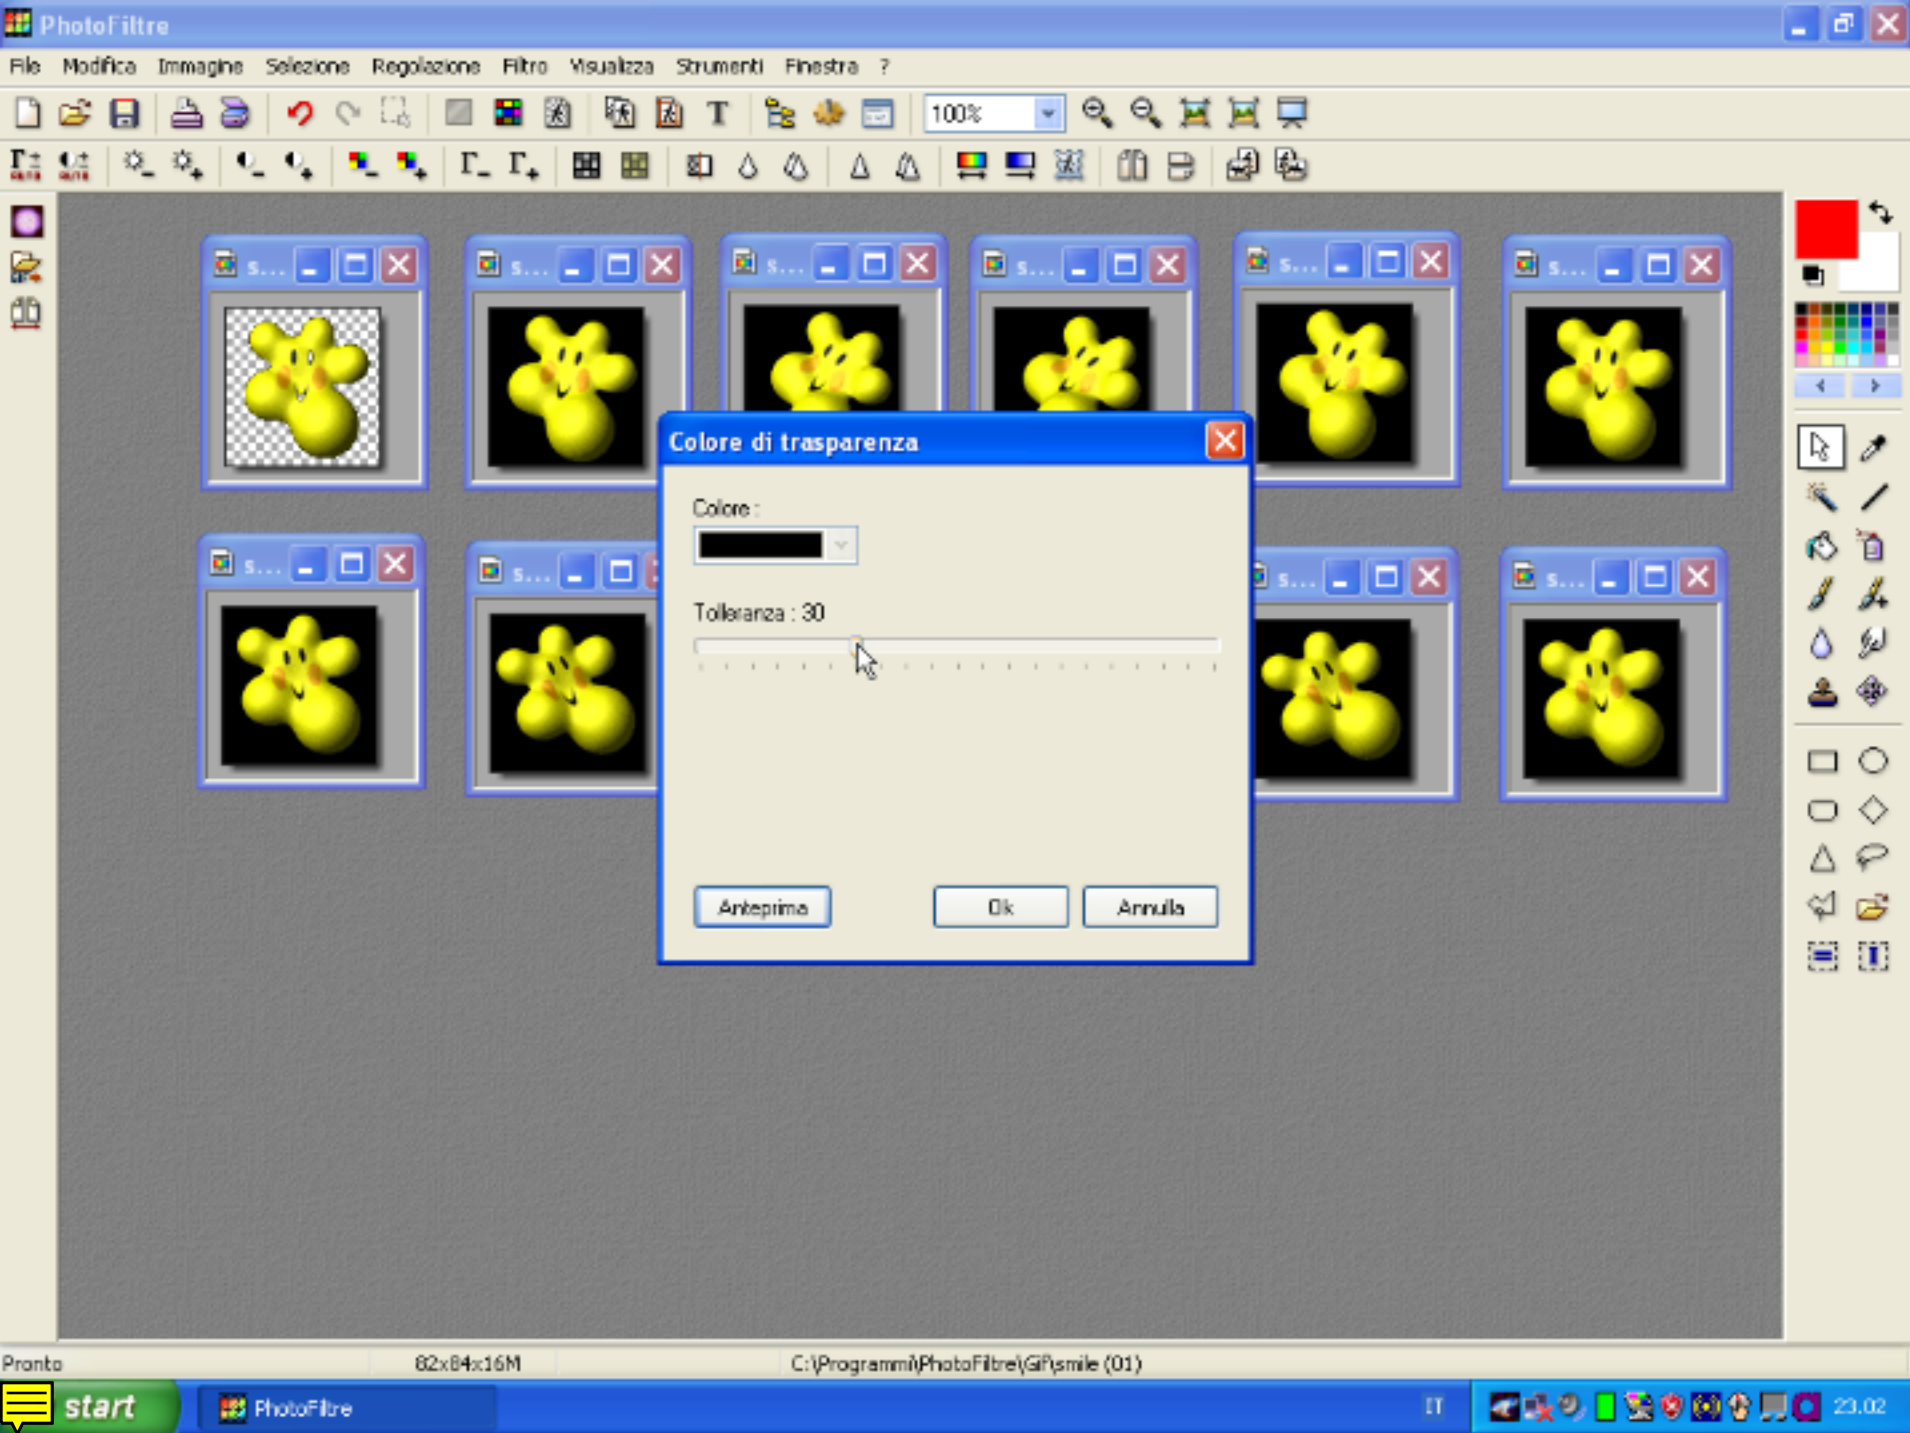

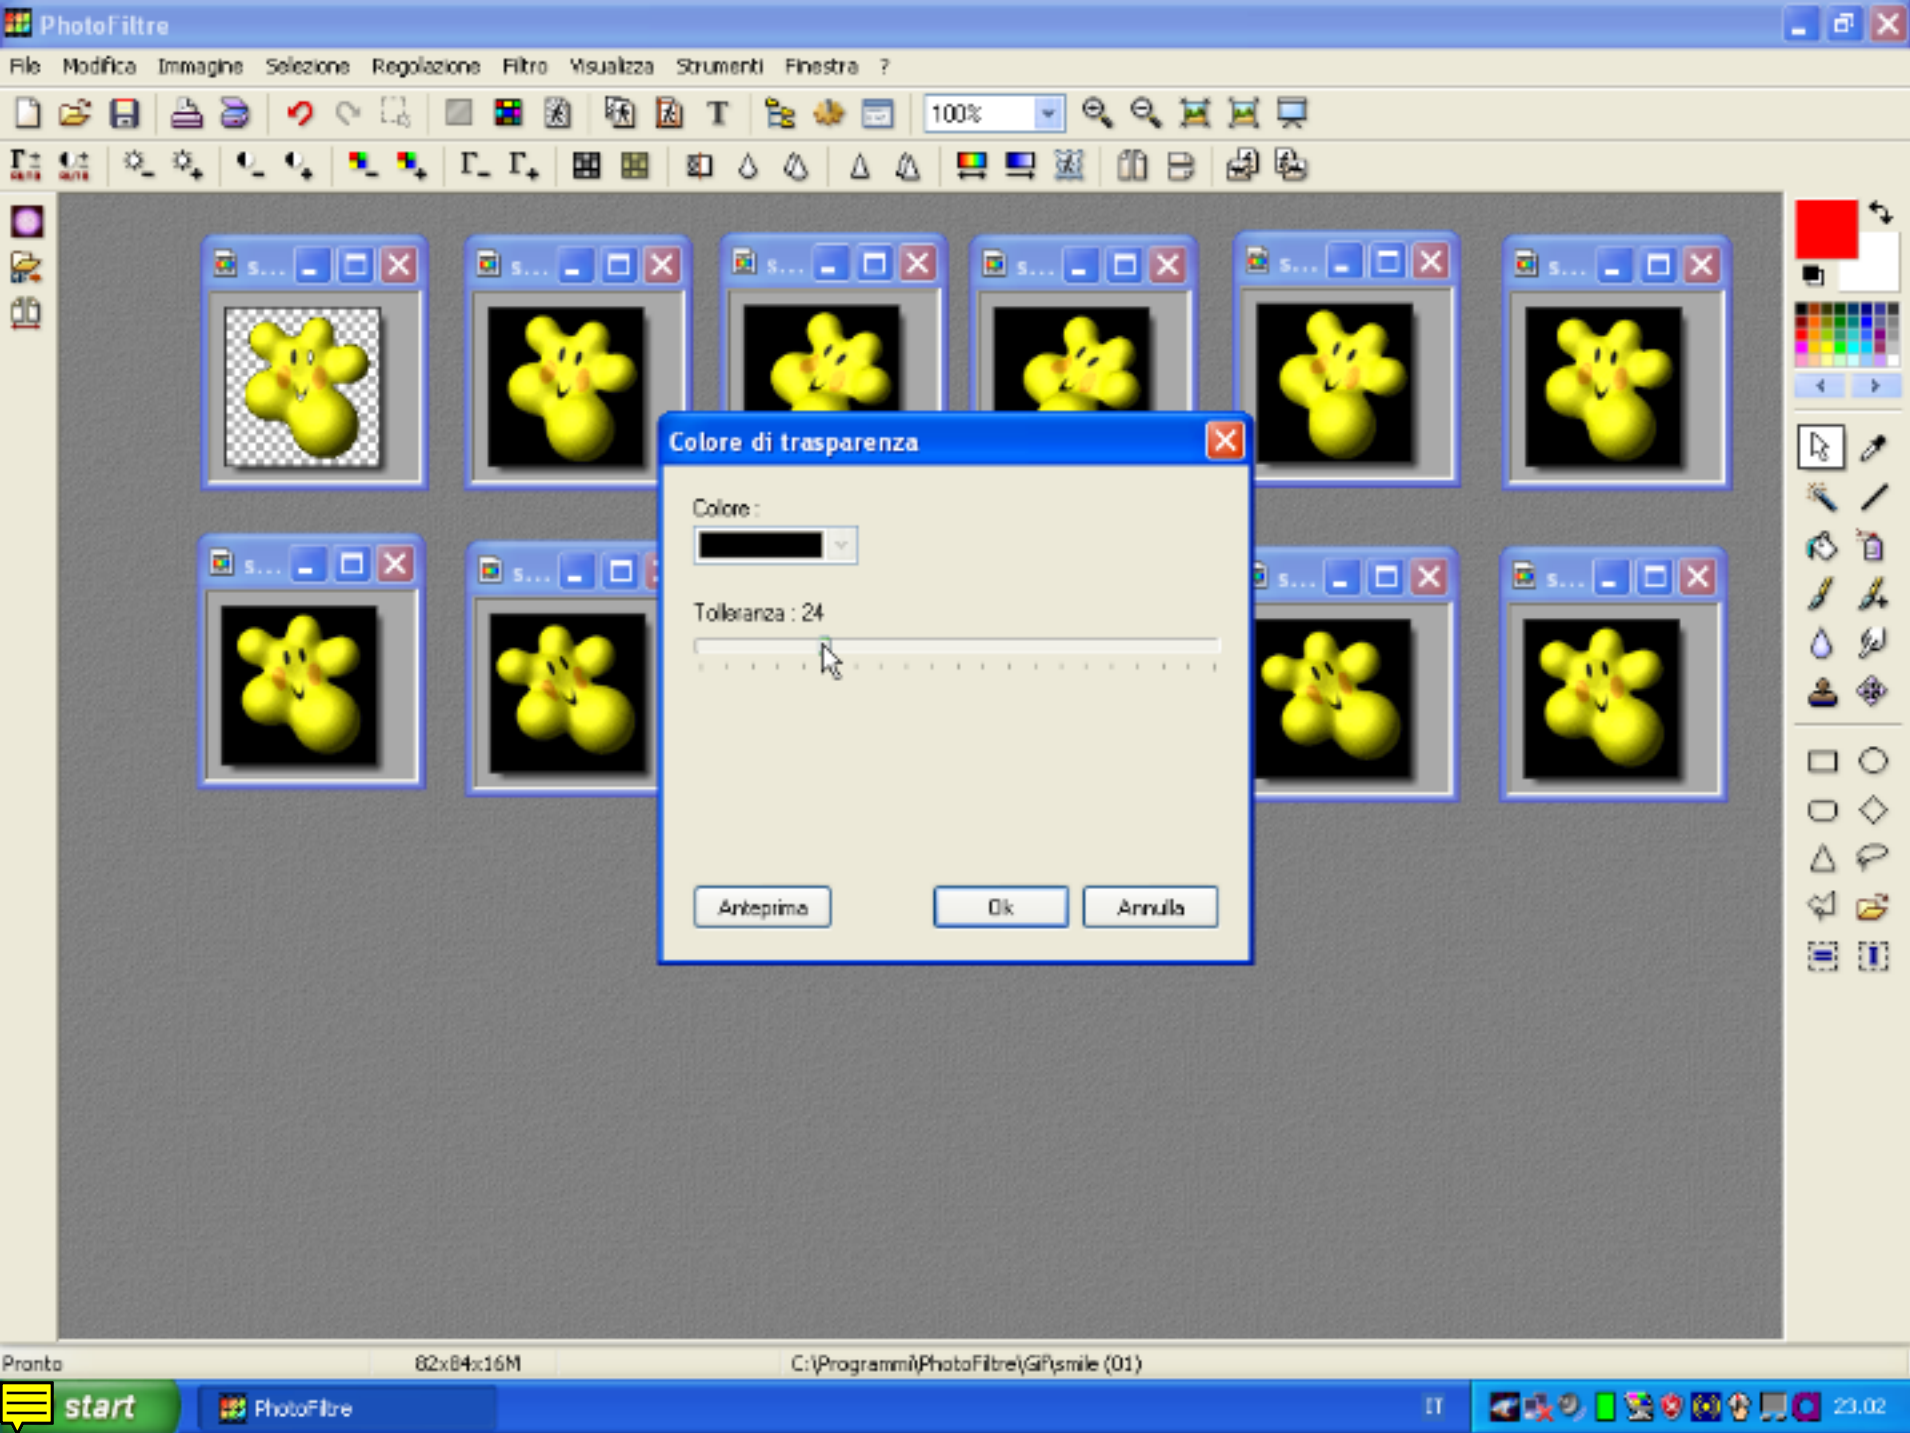

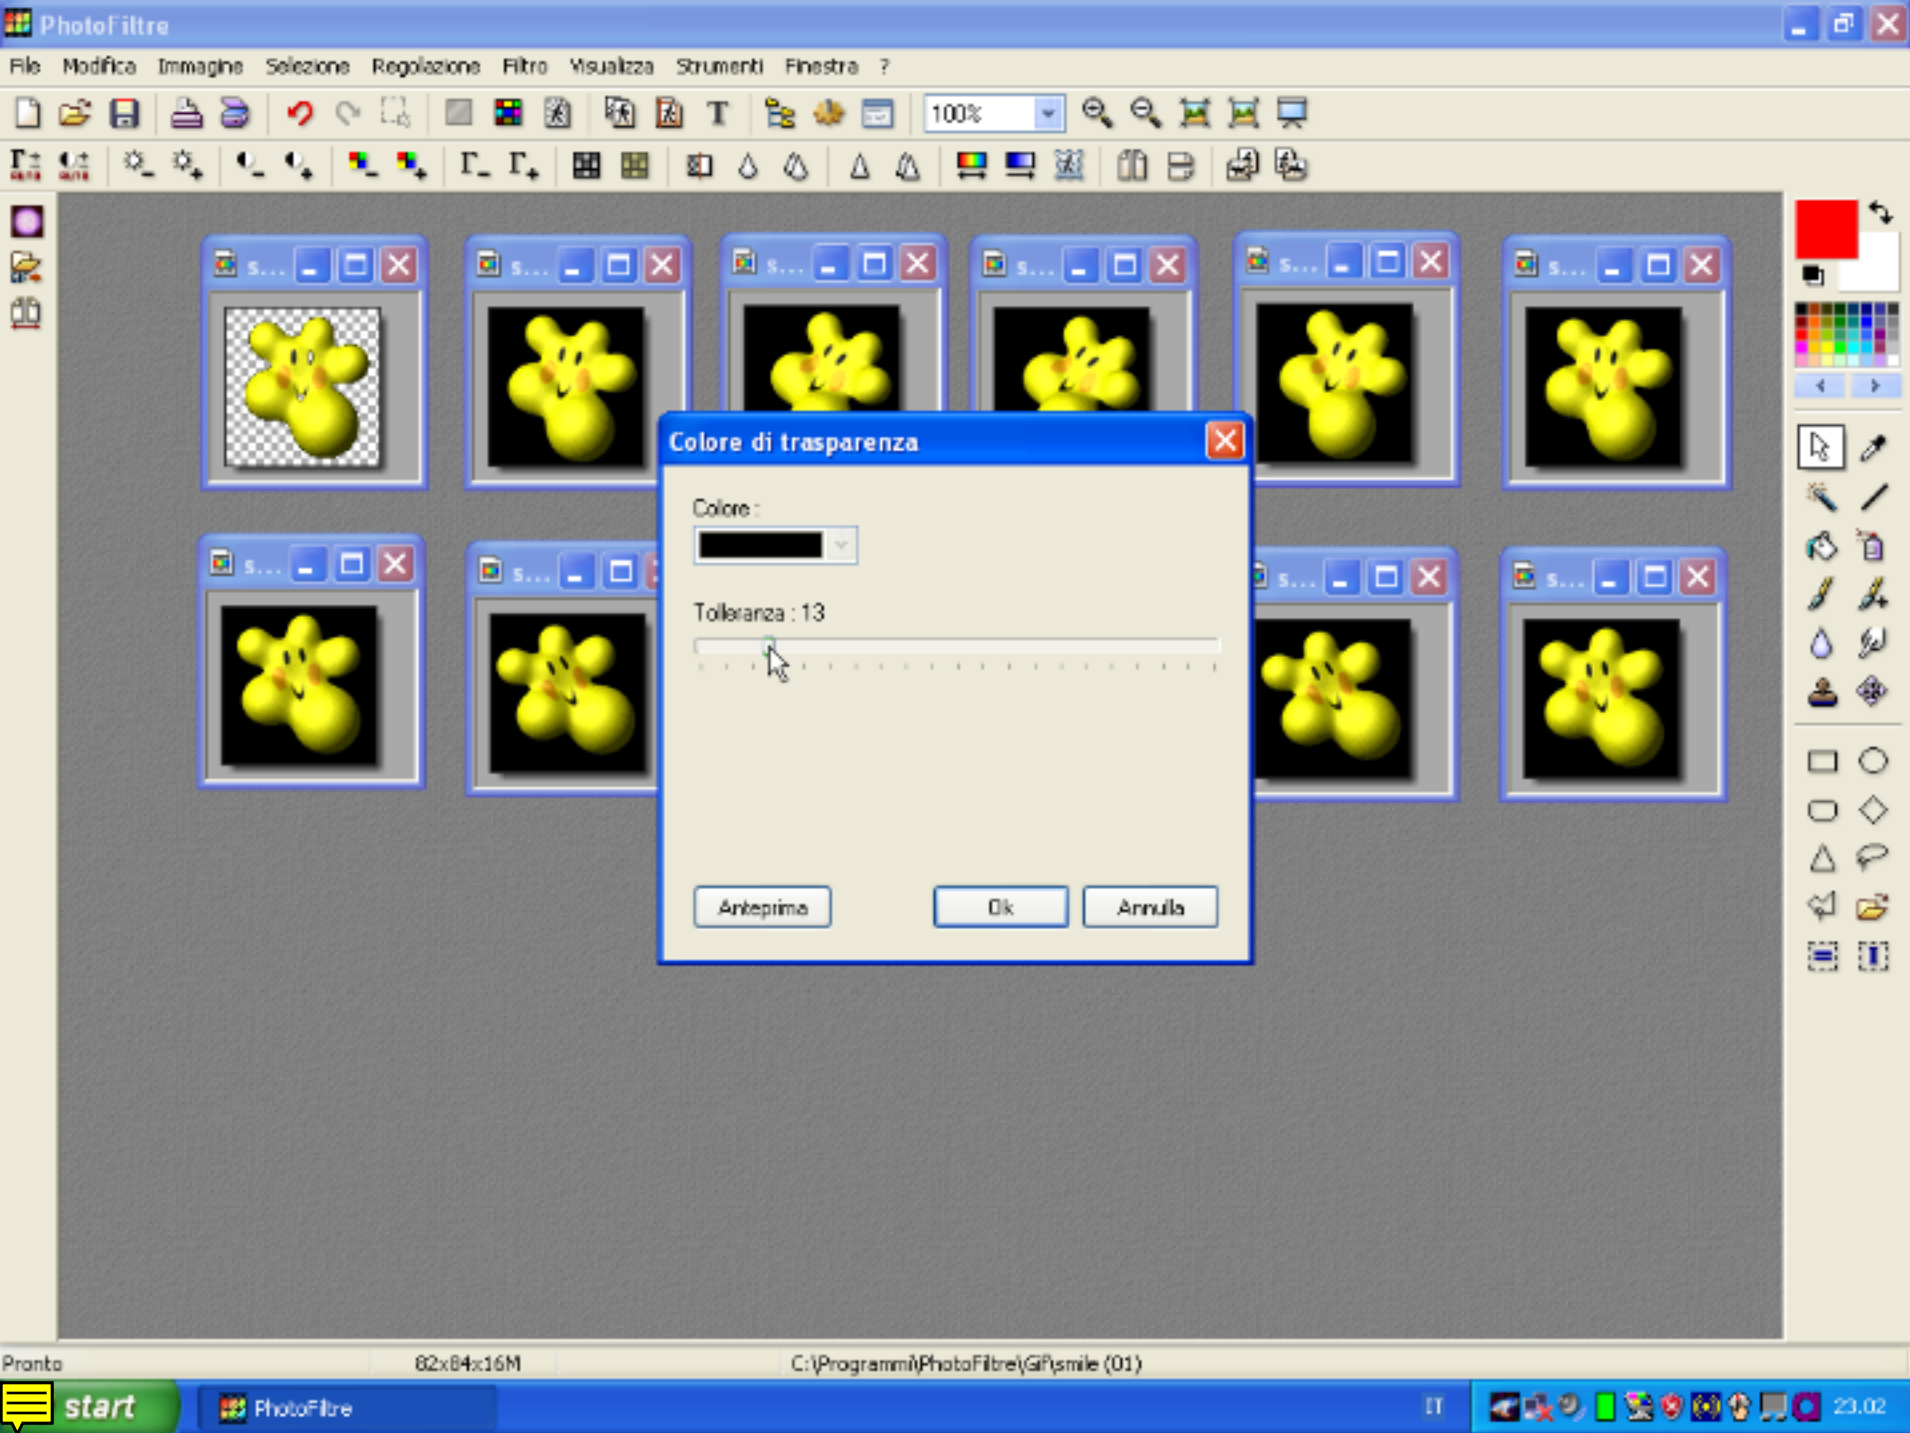

Cliccando "Anteprima" si può visualizzare il risultato che si otterrà prima che questo venga salvato.

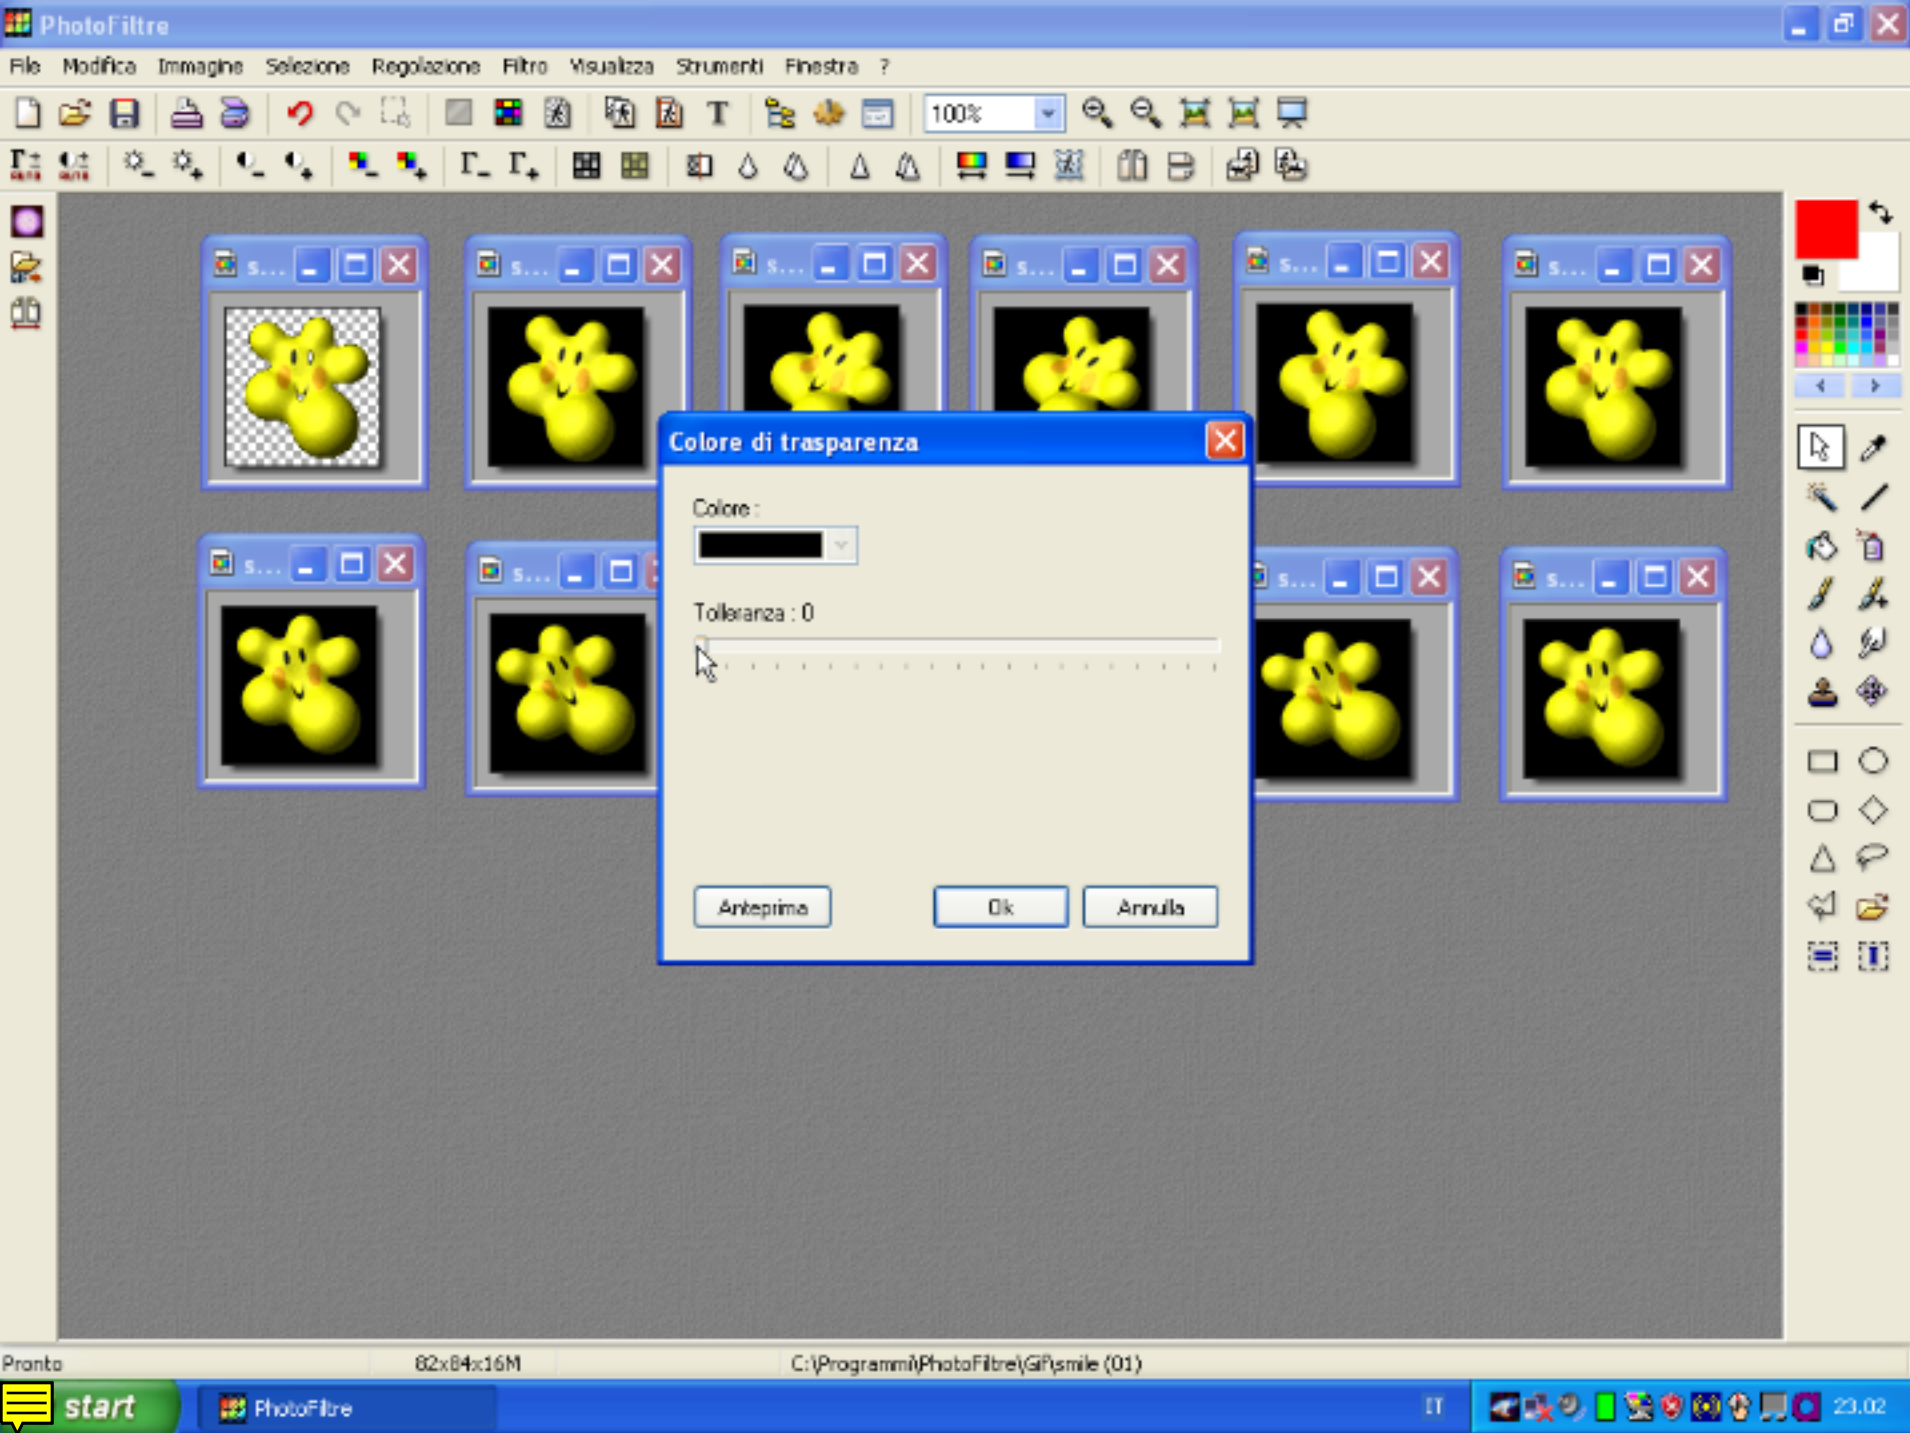

In questo caso si visualizza l'anteprima di trasparenza del colore nero con tolleranza pari a 30 (valore predefinito impostato dal programma).

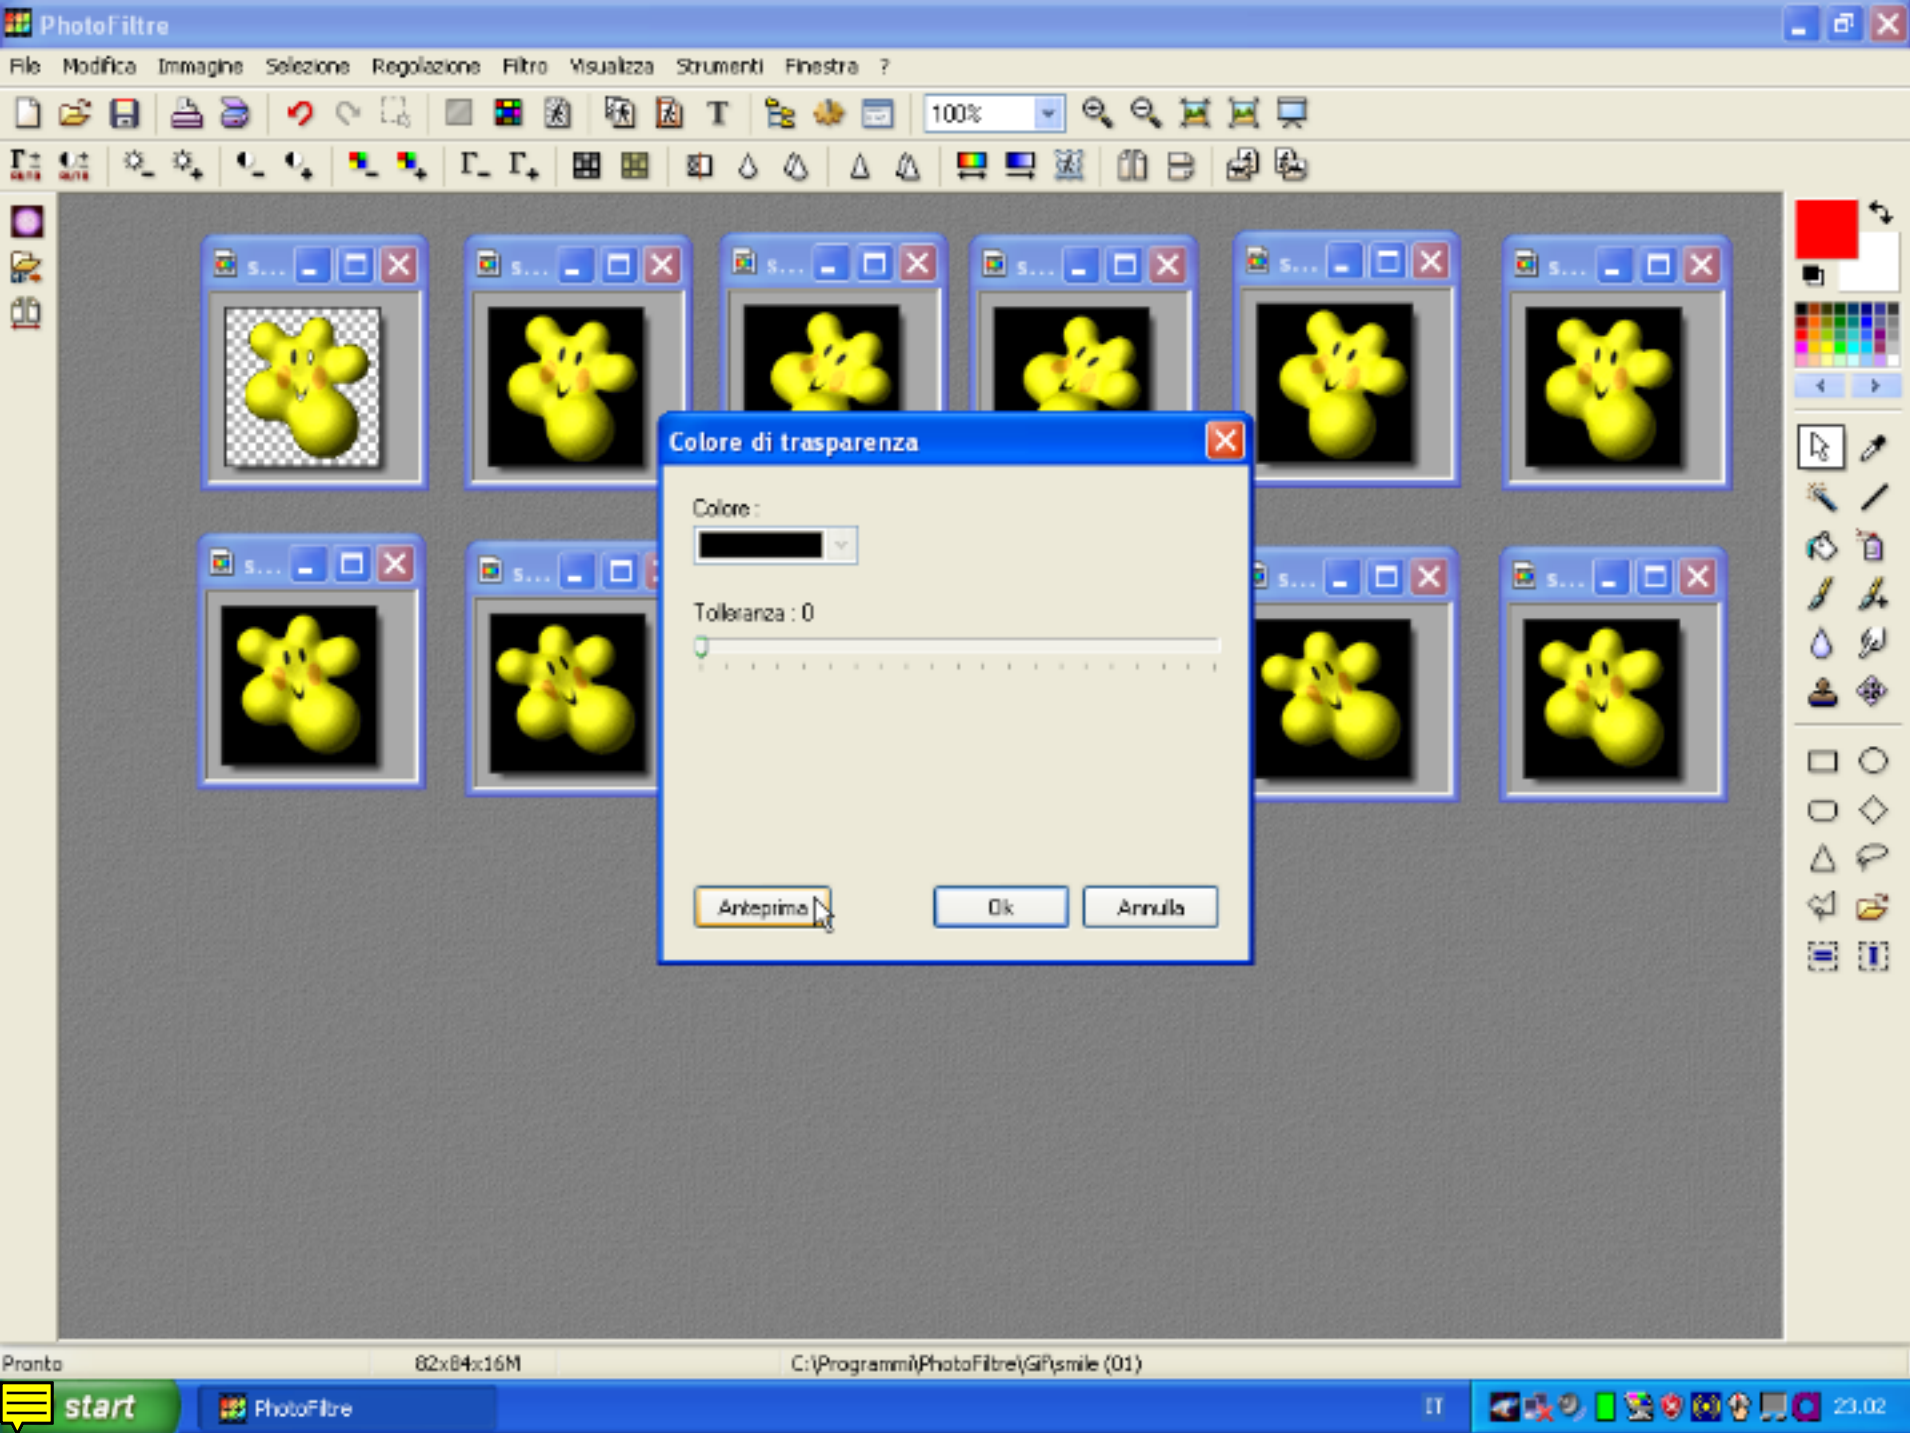

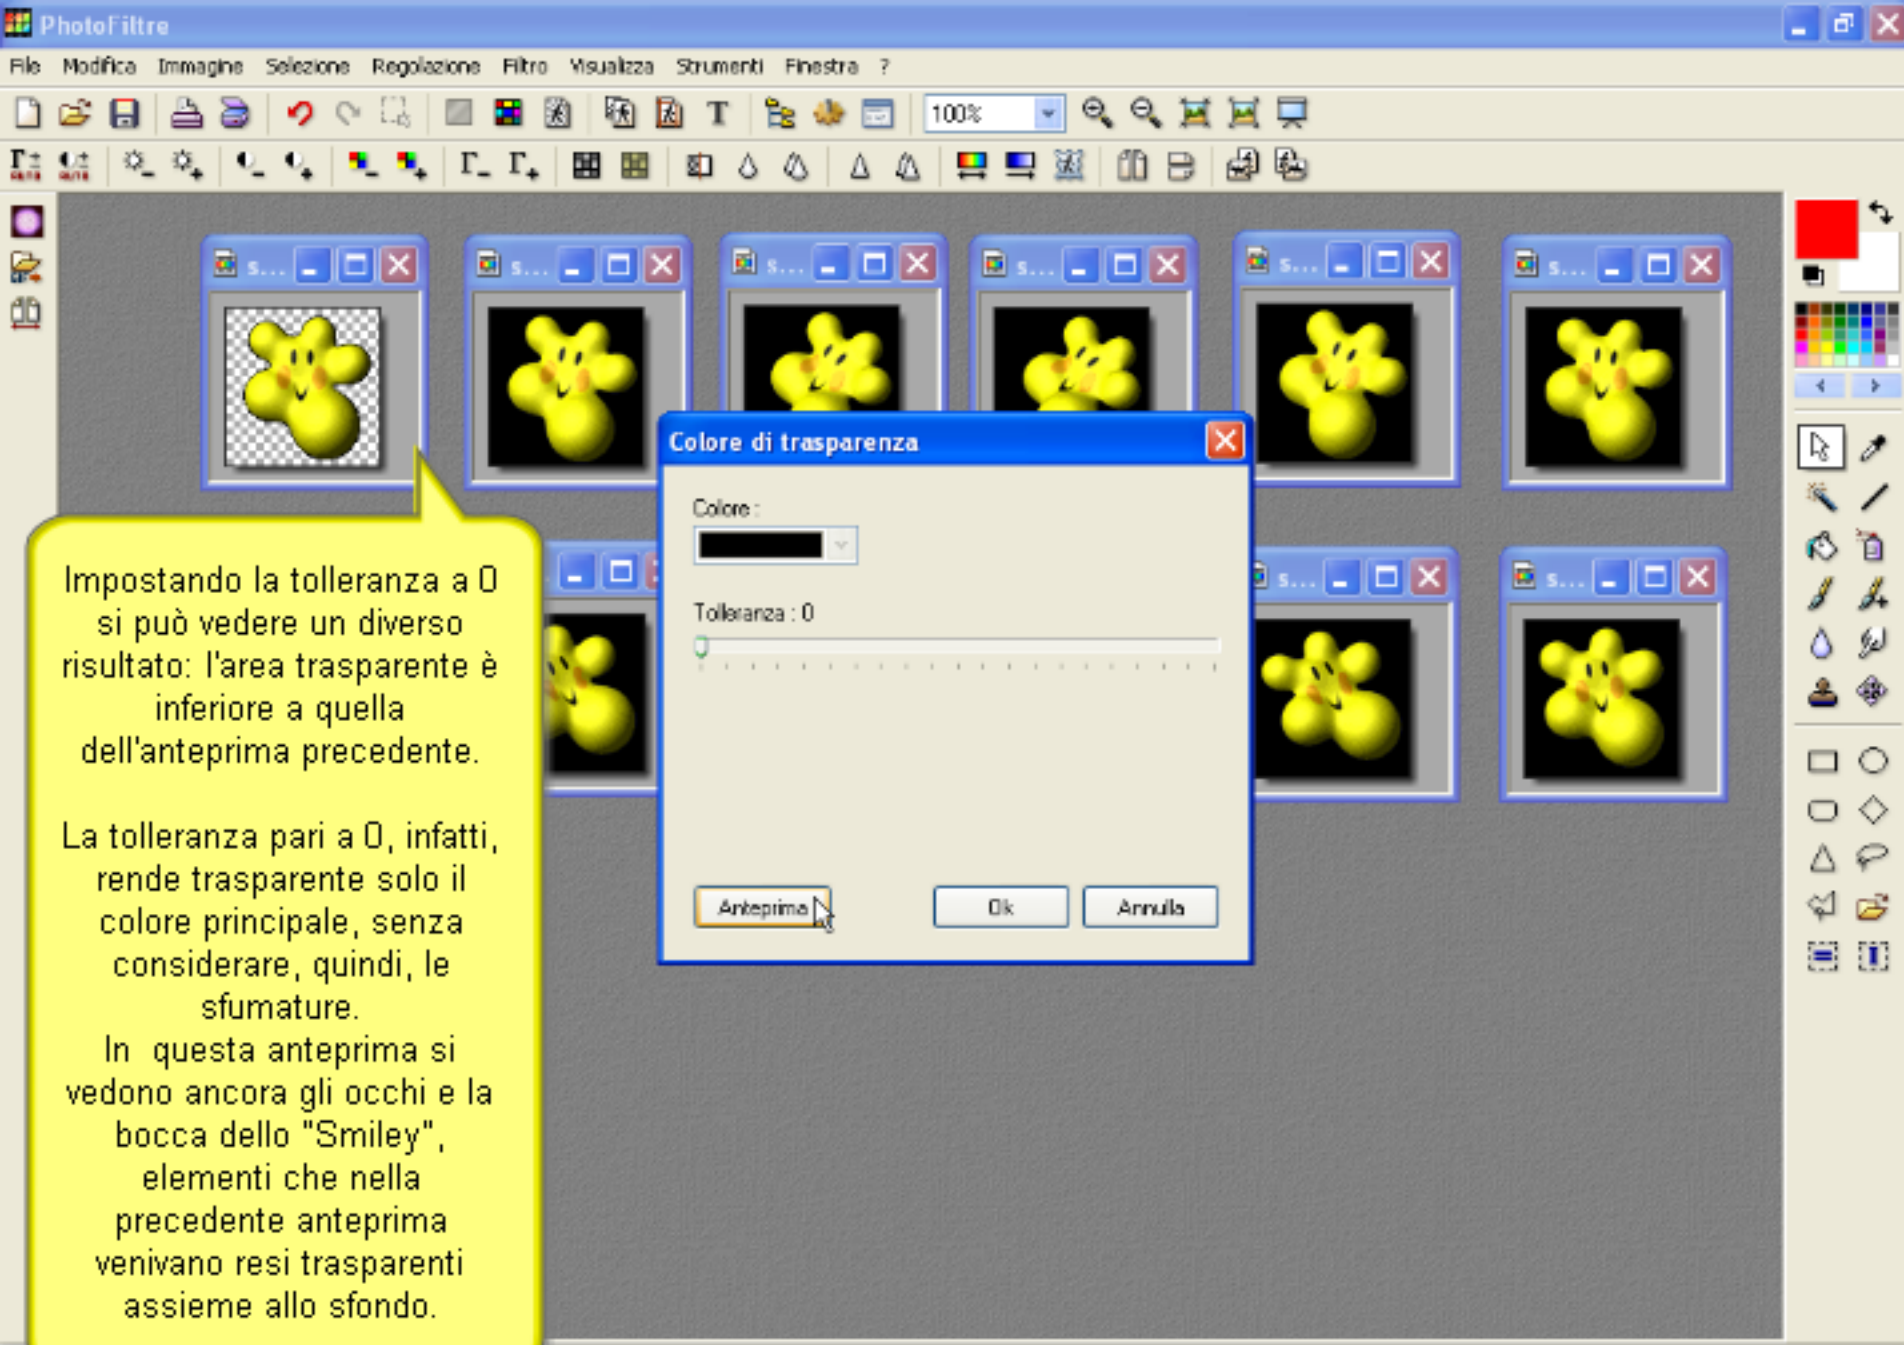

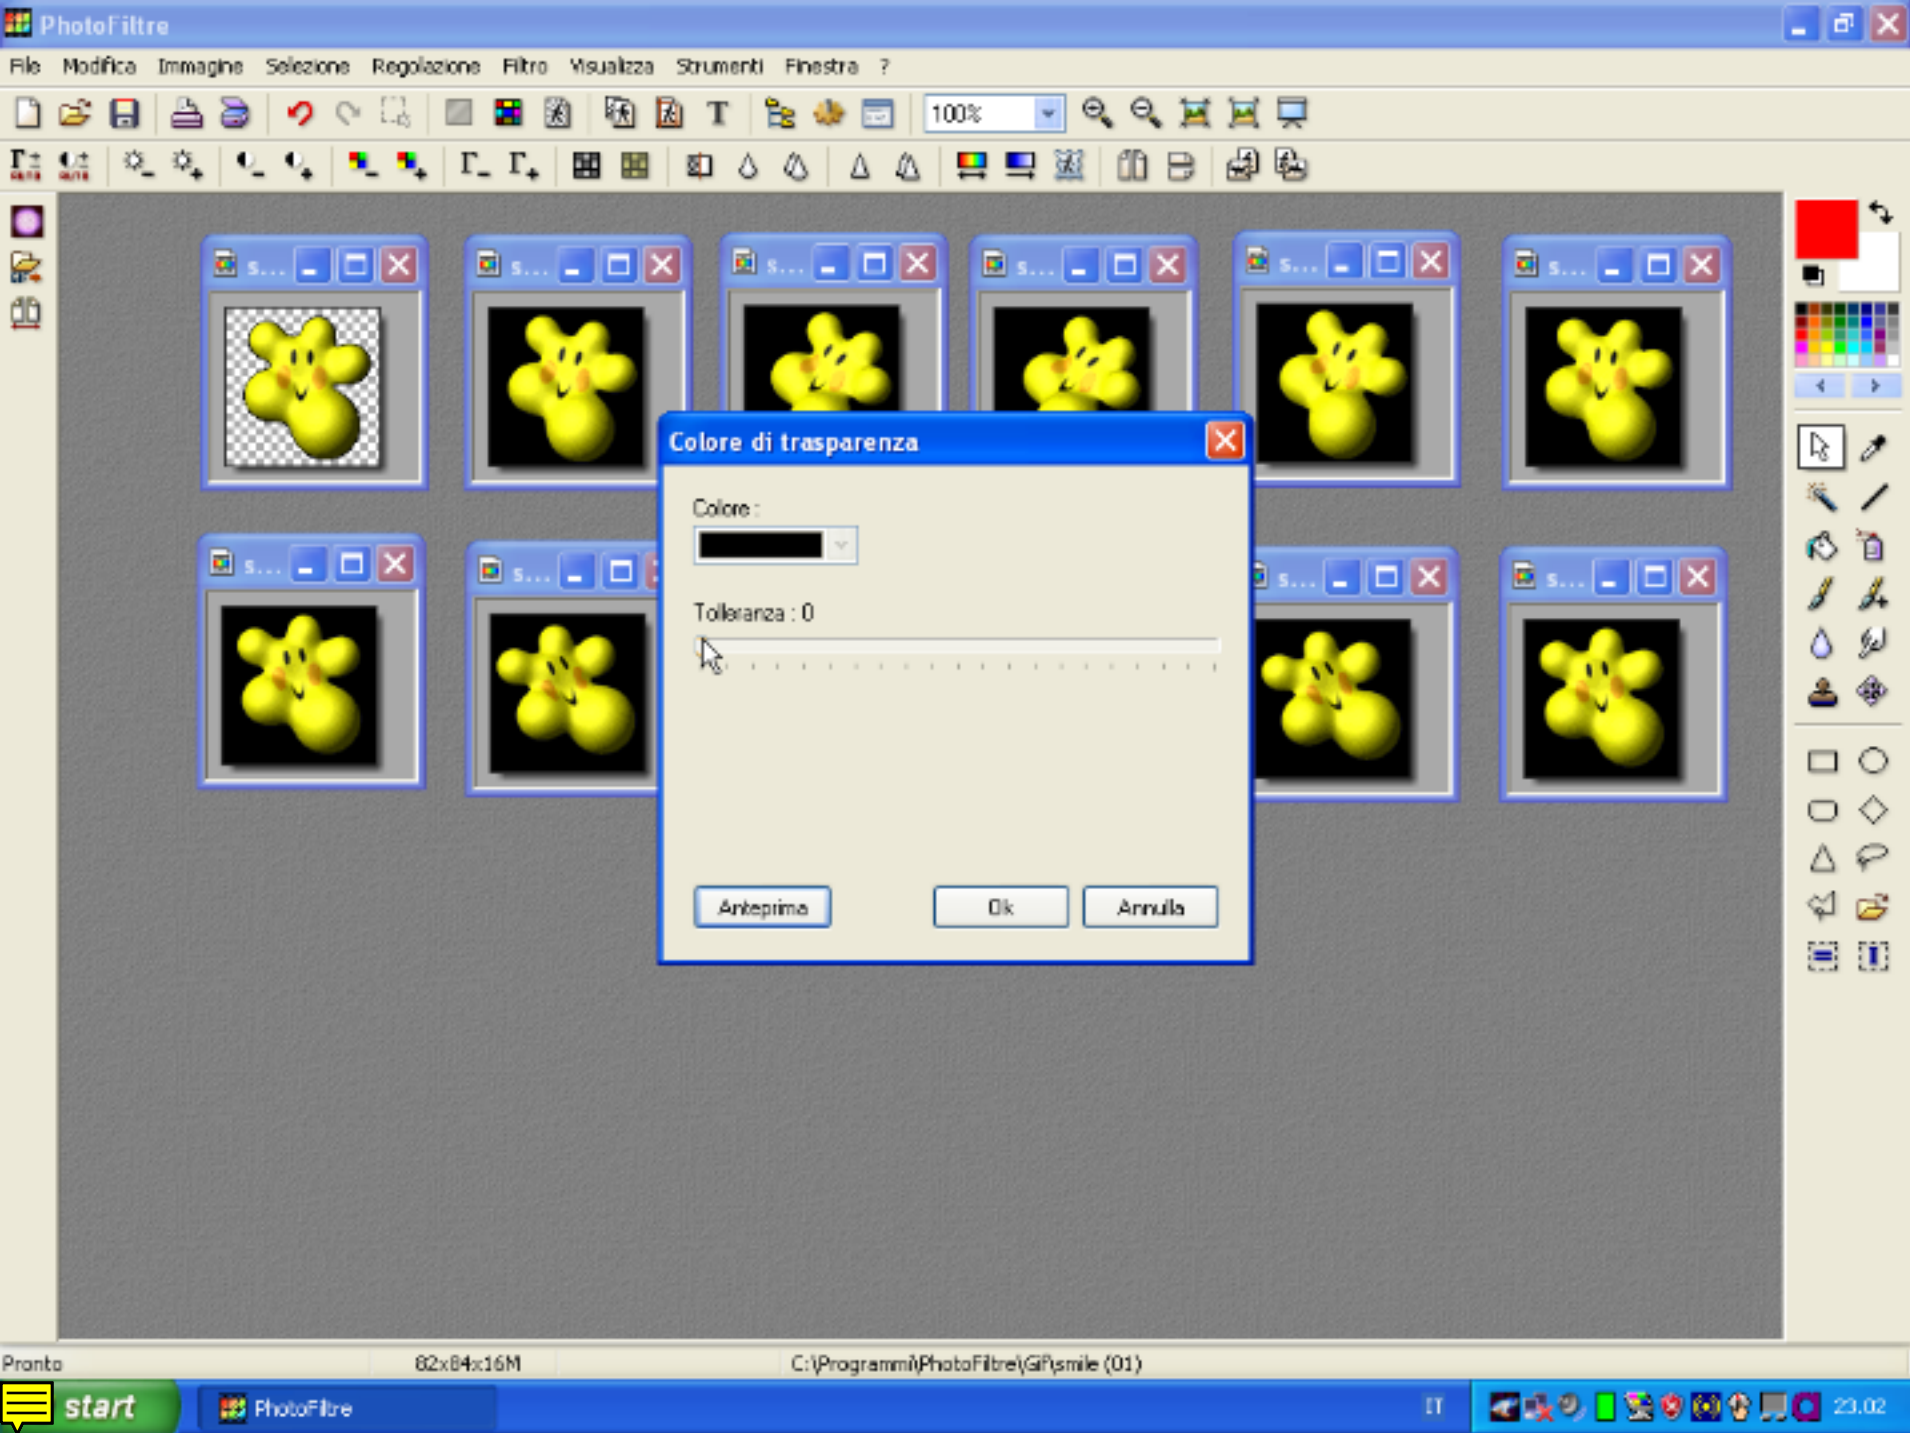

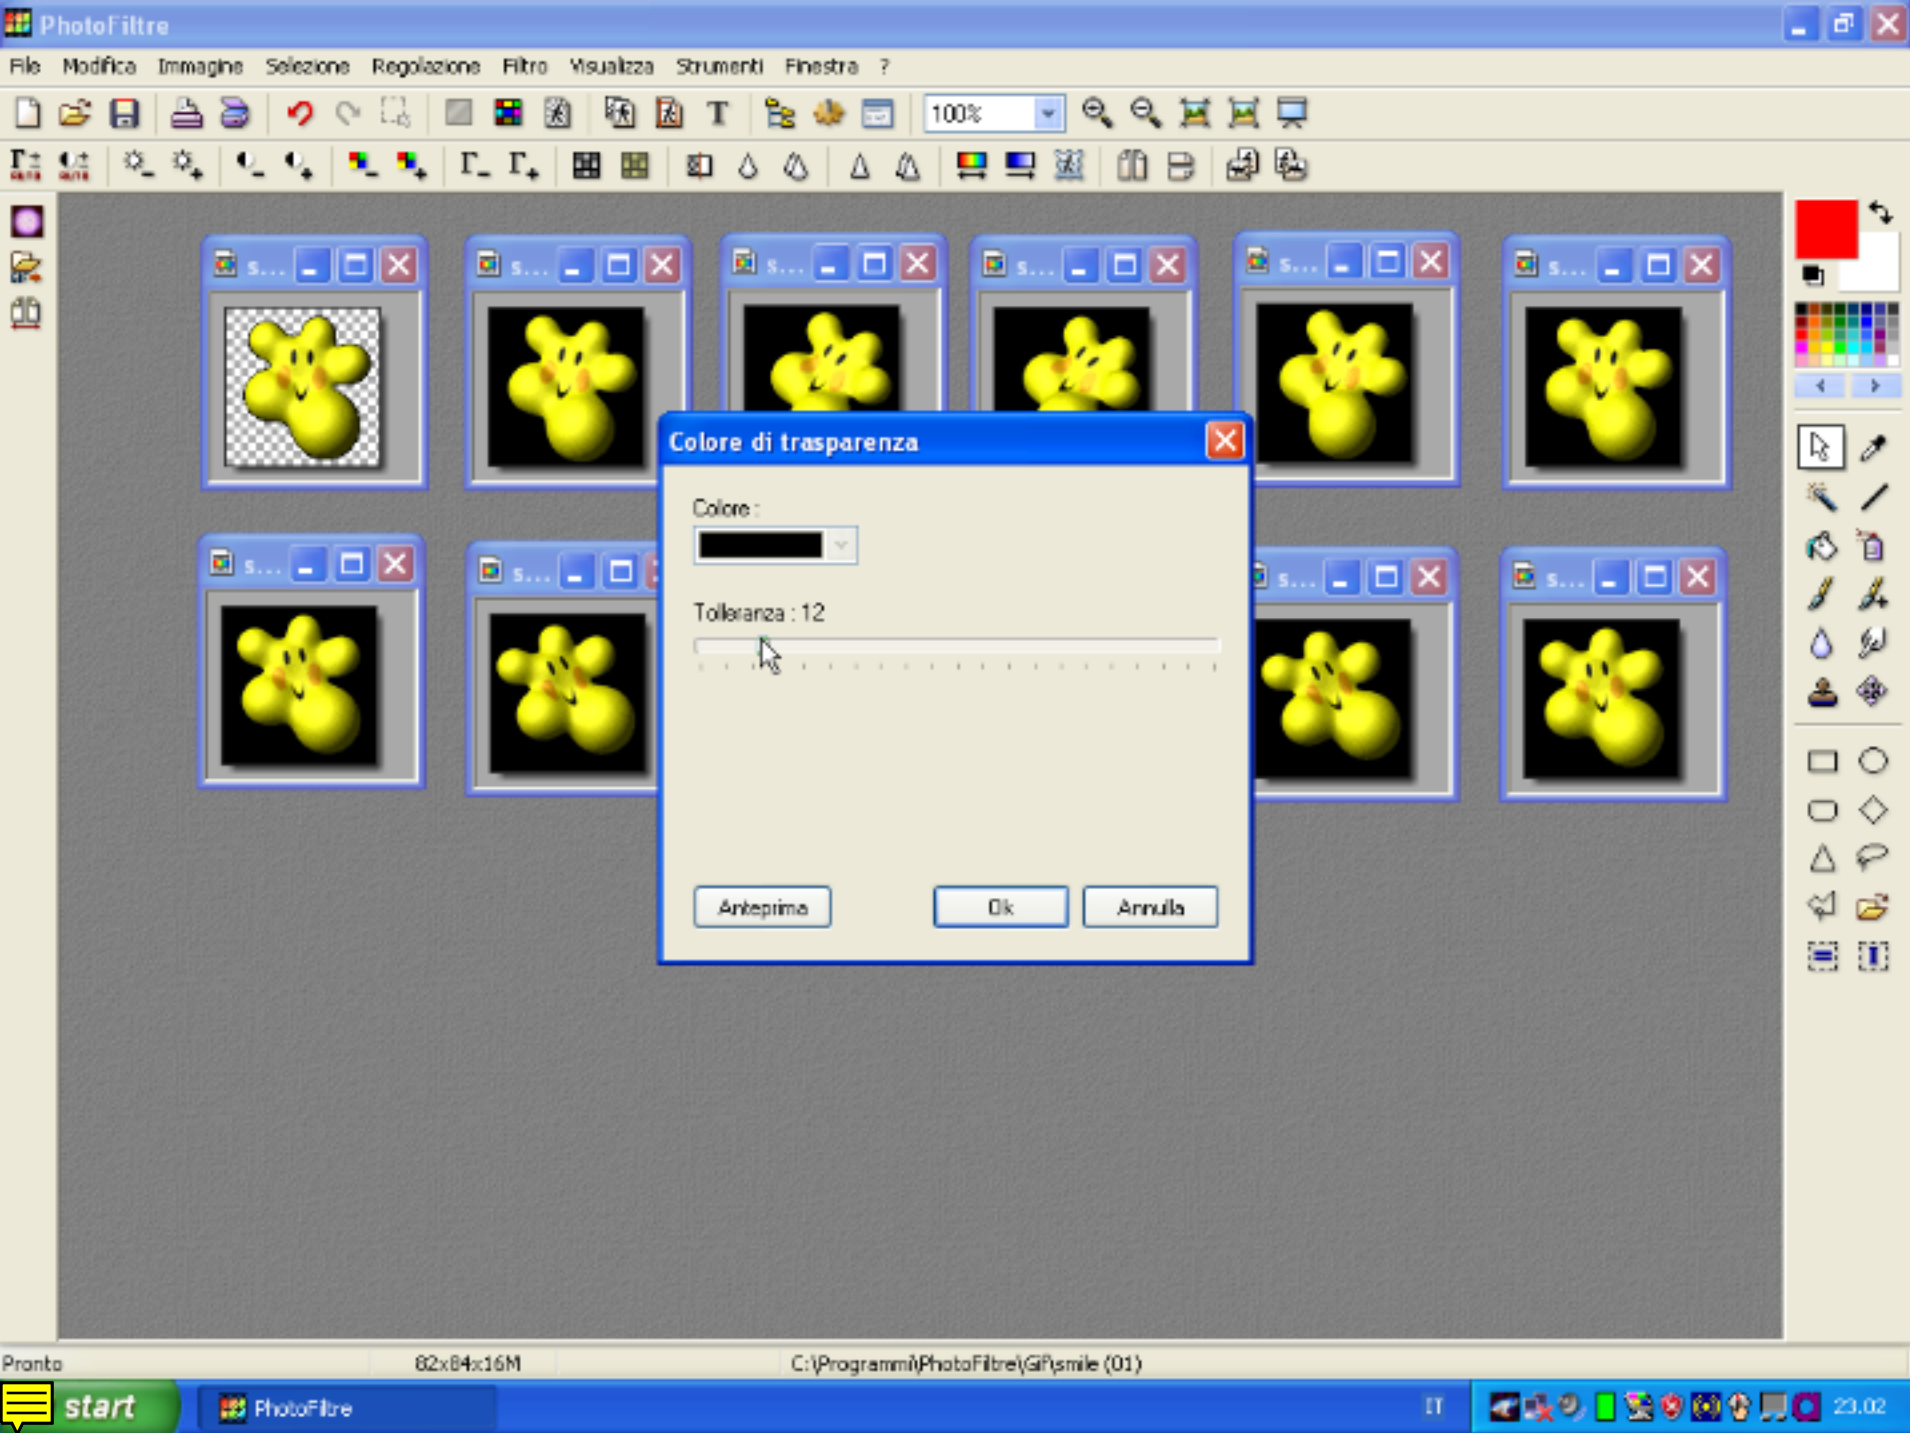

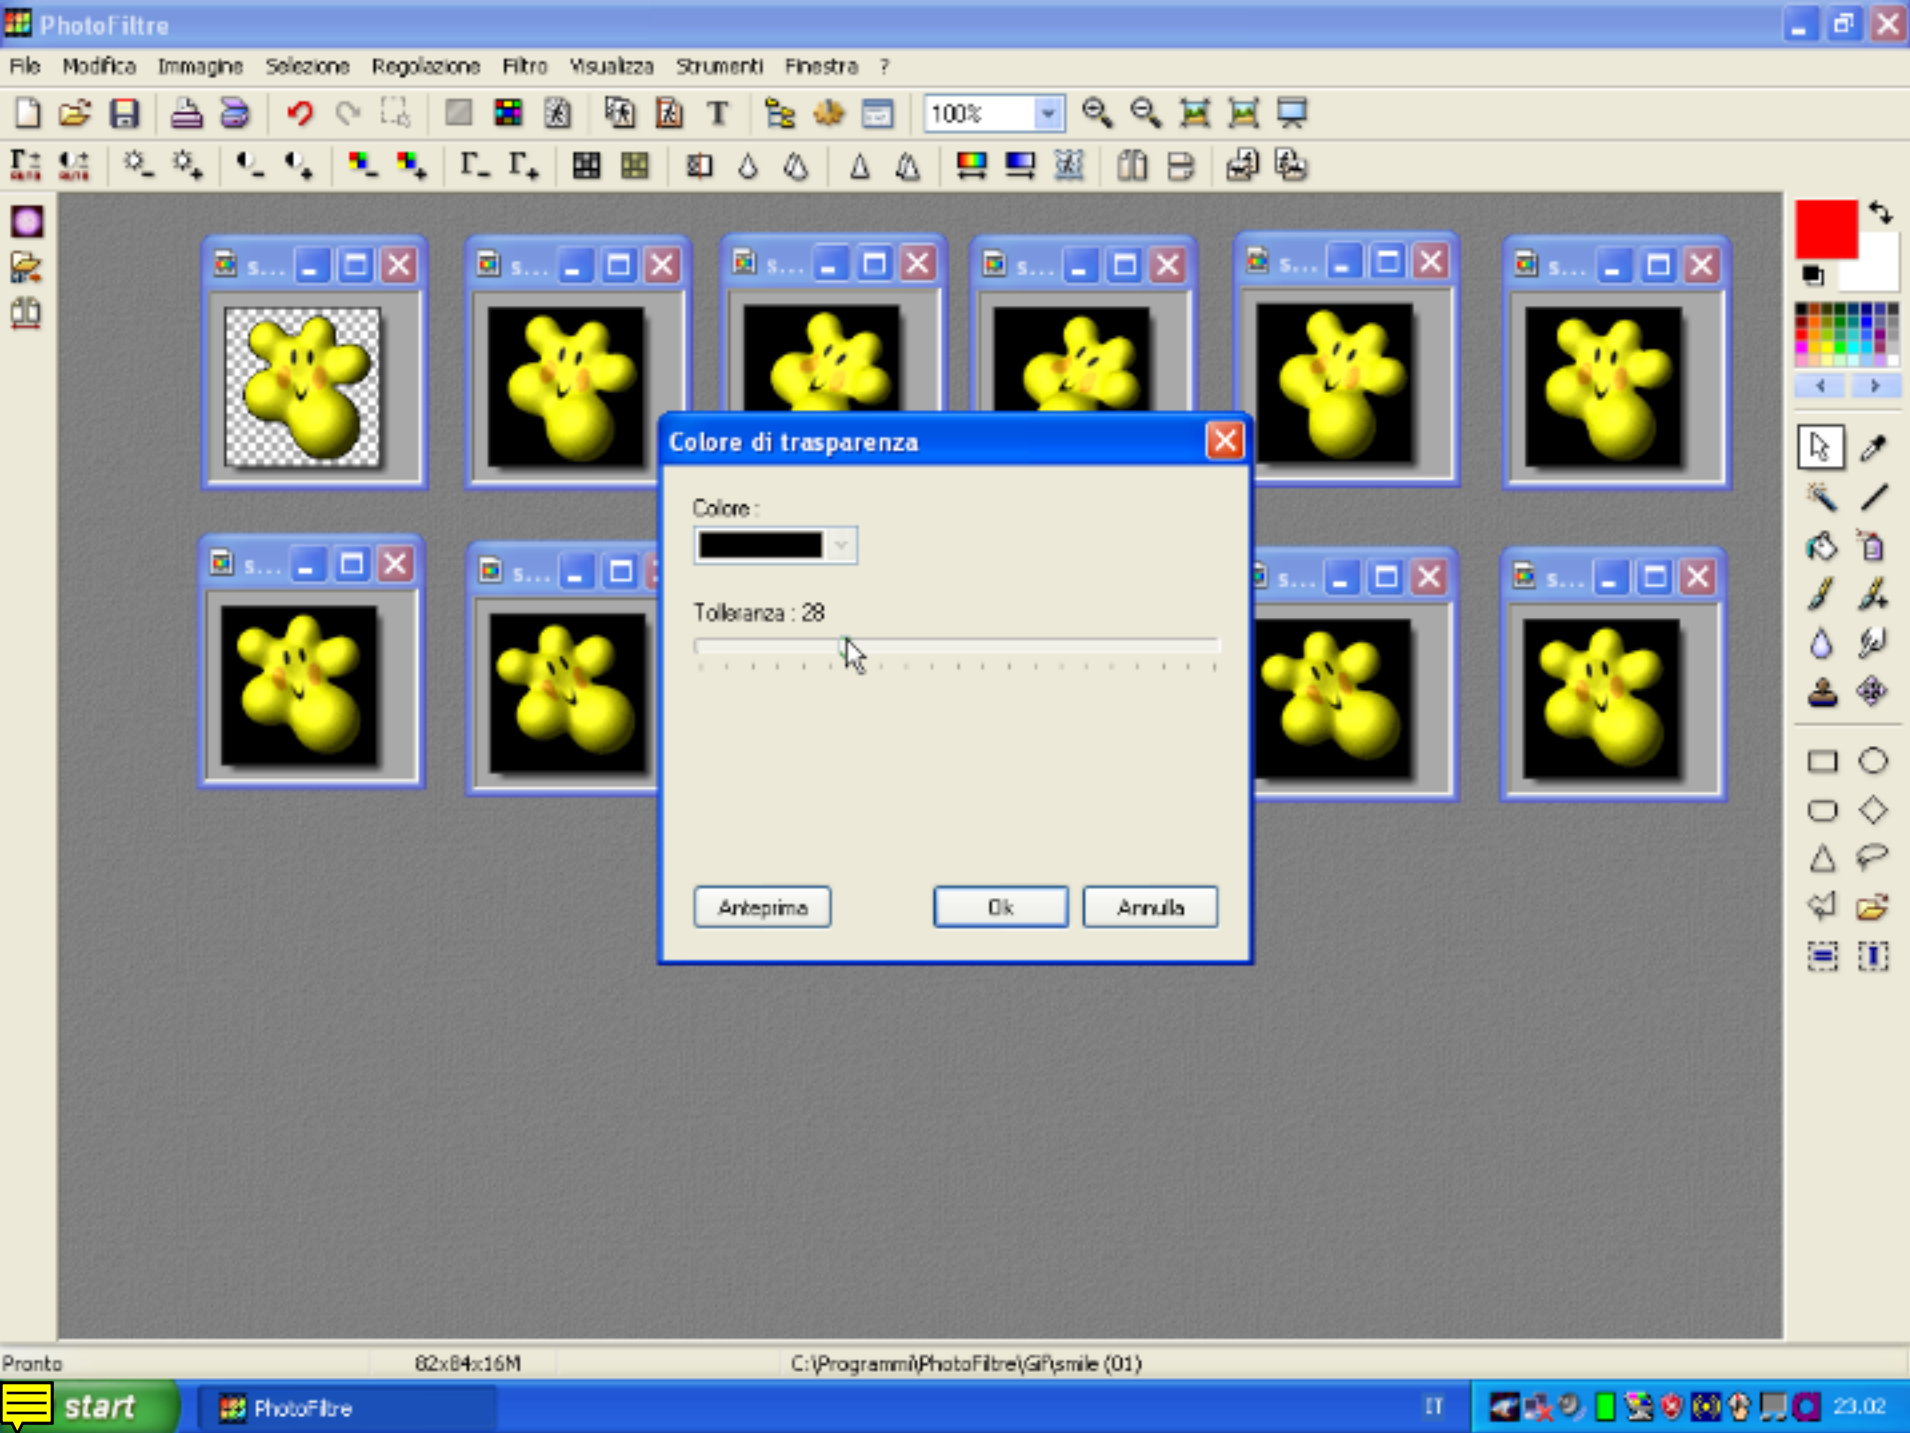

Impostando la tolleranza a 0 si può vedere un diverso risultato: l'area trasparente è inferiore a quella dell'anteprima precedente.

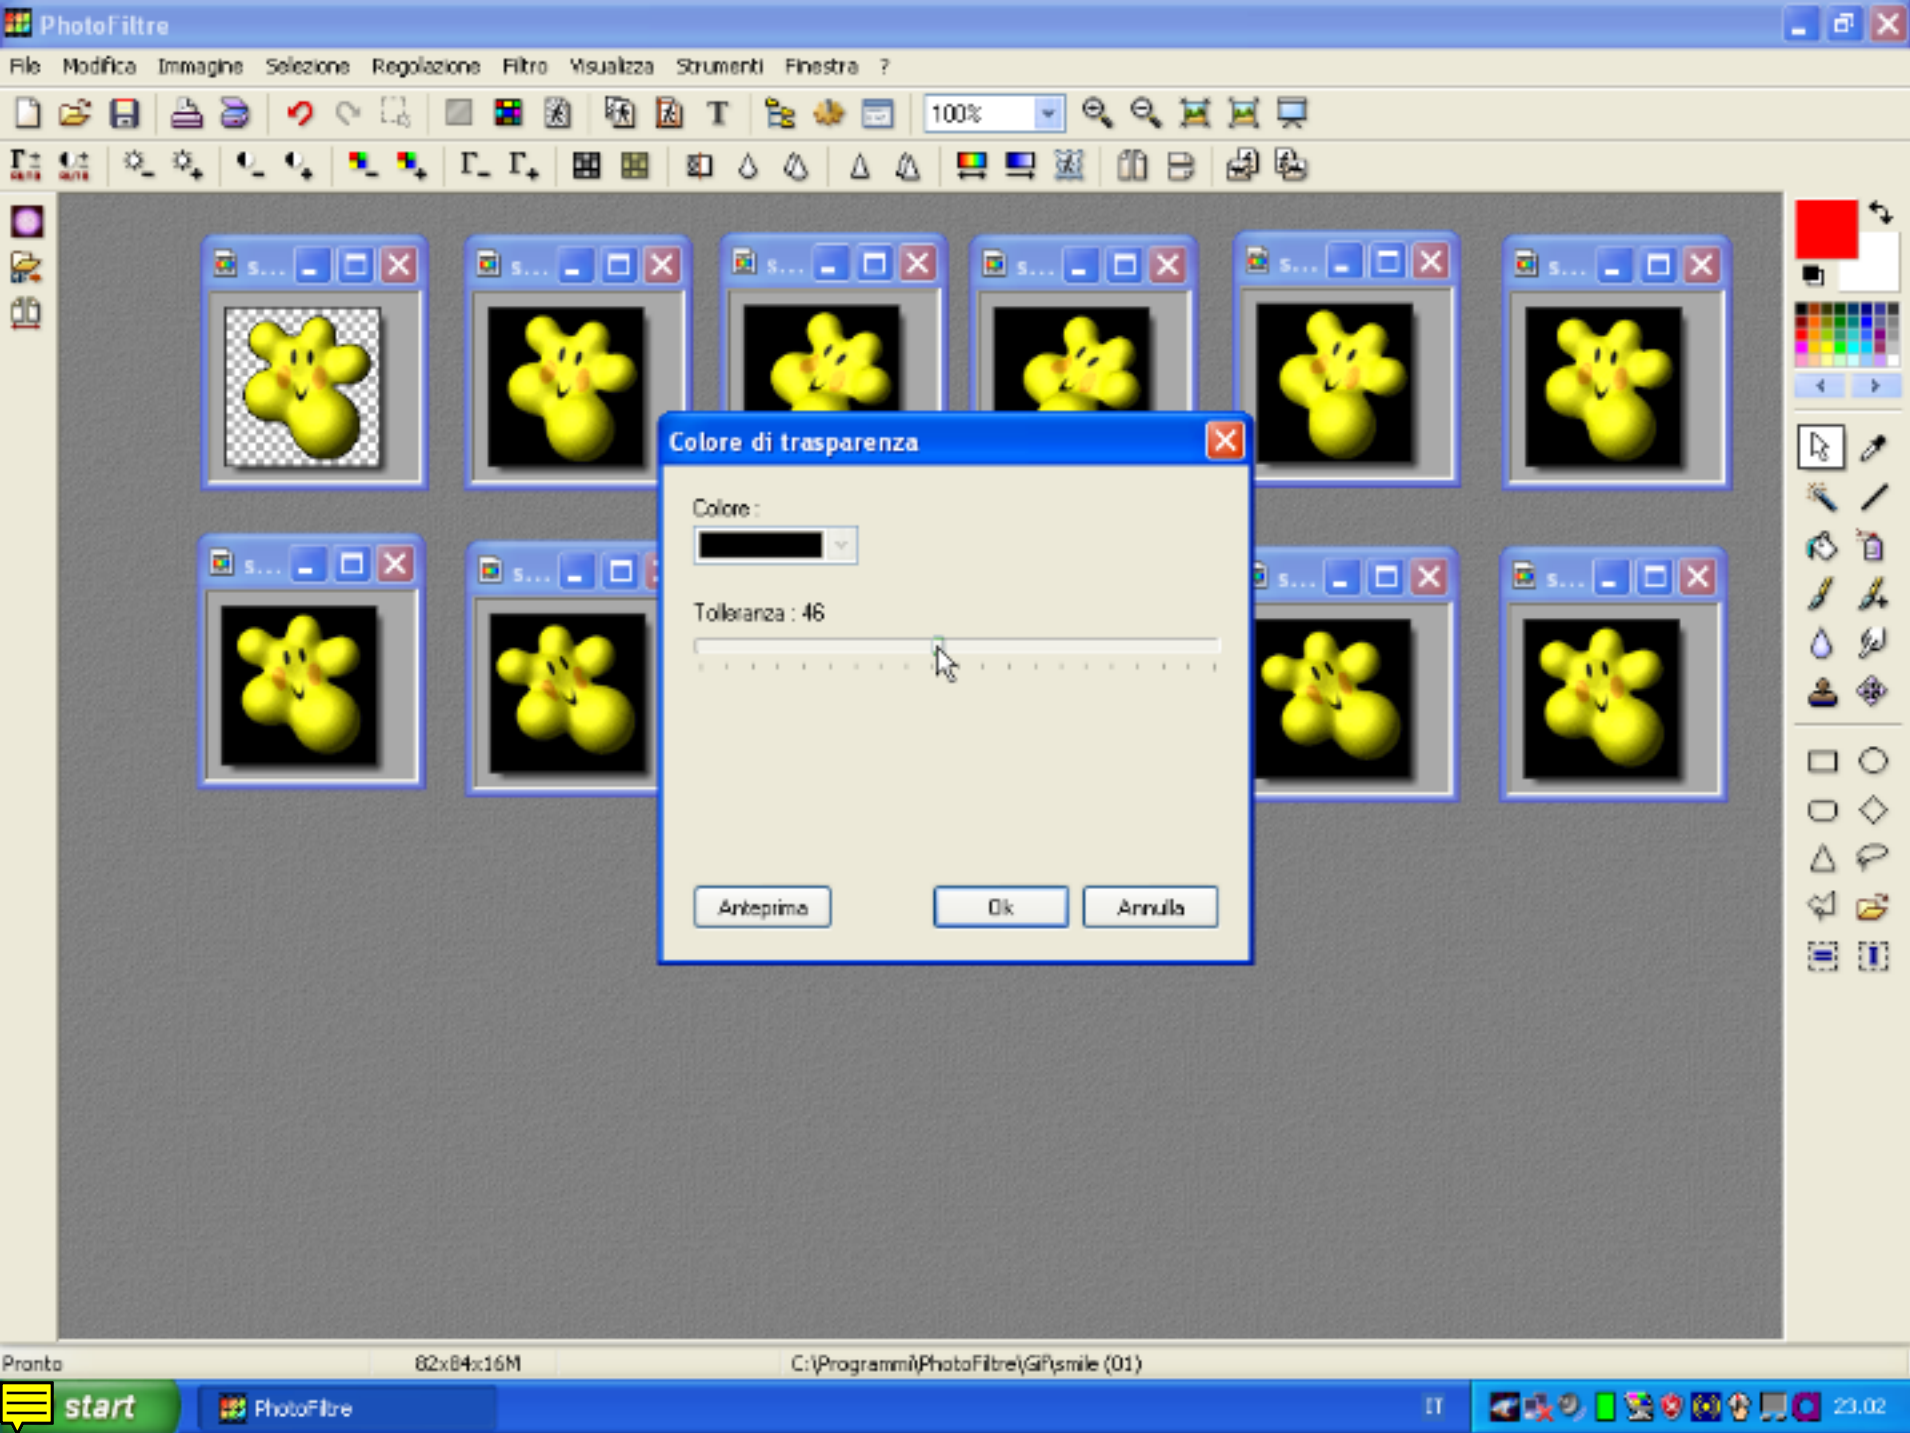

La tolleranza pari a 0, infatti, rende trasparente solo il colore principale, senza considerare, quindi, le sfumature.

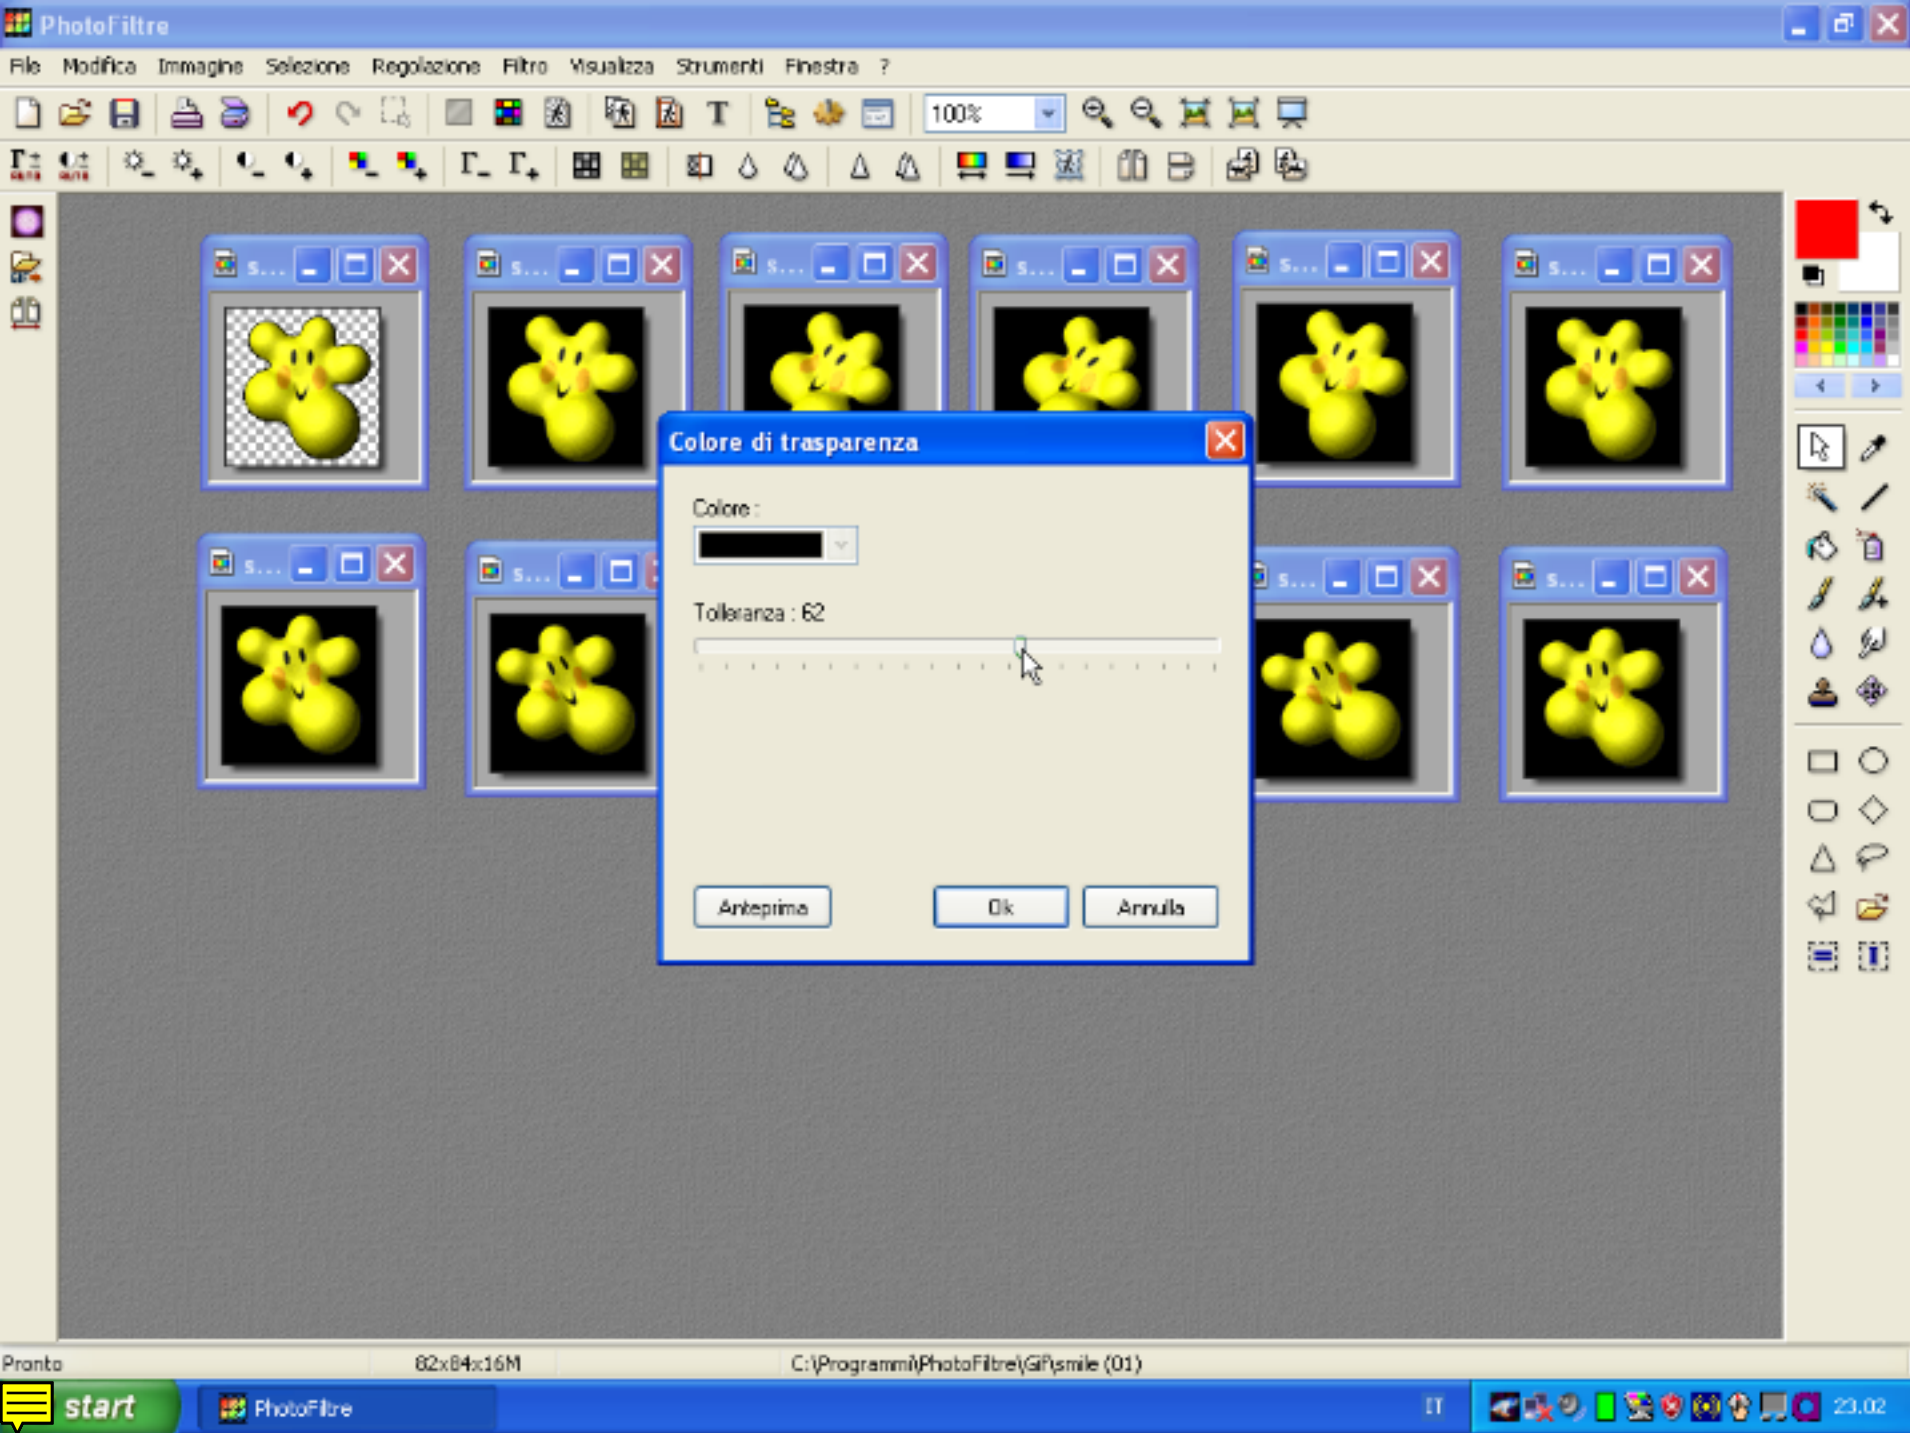

In questa anteprima si vedono ancora gli occhi e la bocca dello "Smiley", elementi che nella precedente anteprima venivano resi trasparenti assieme allo sfondo.

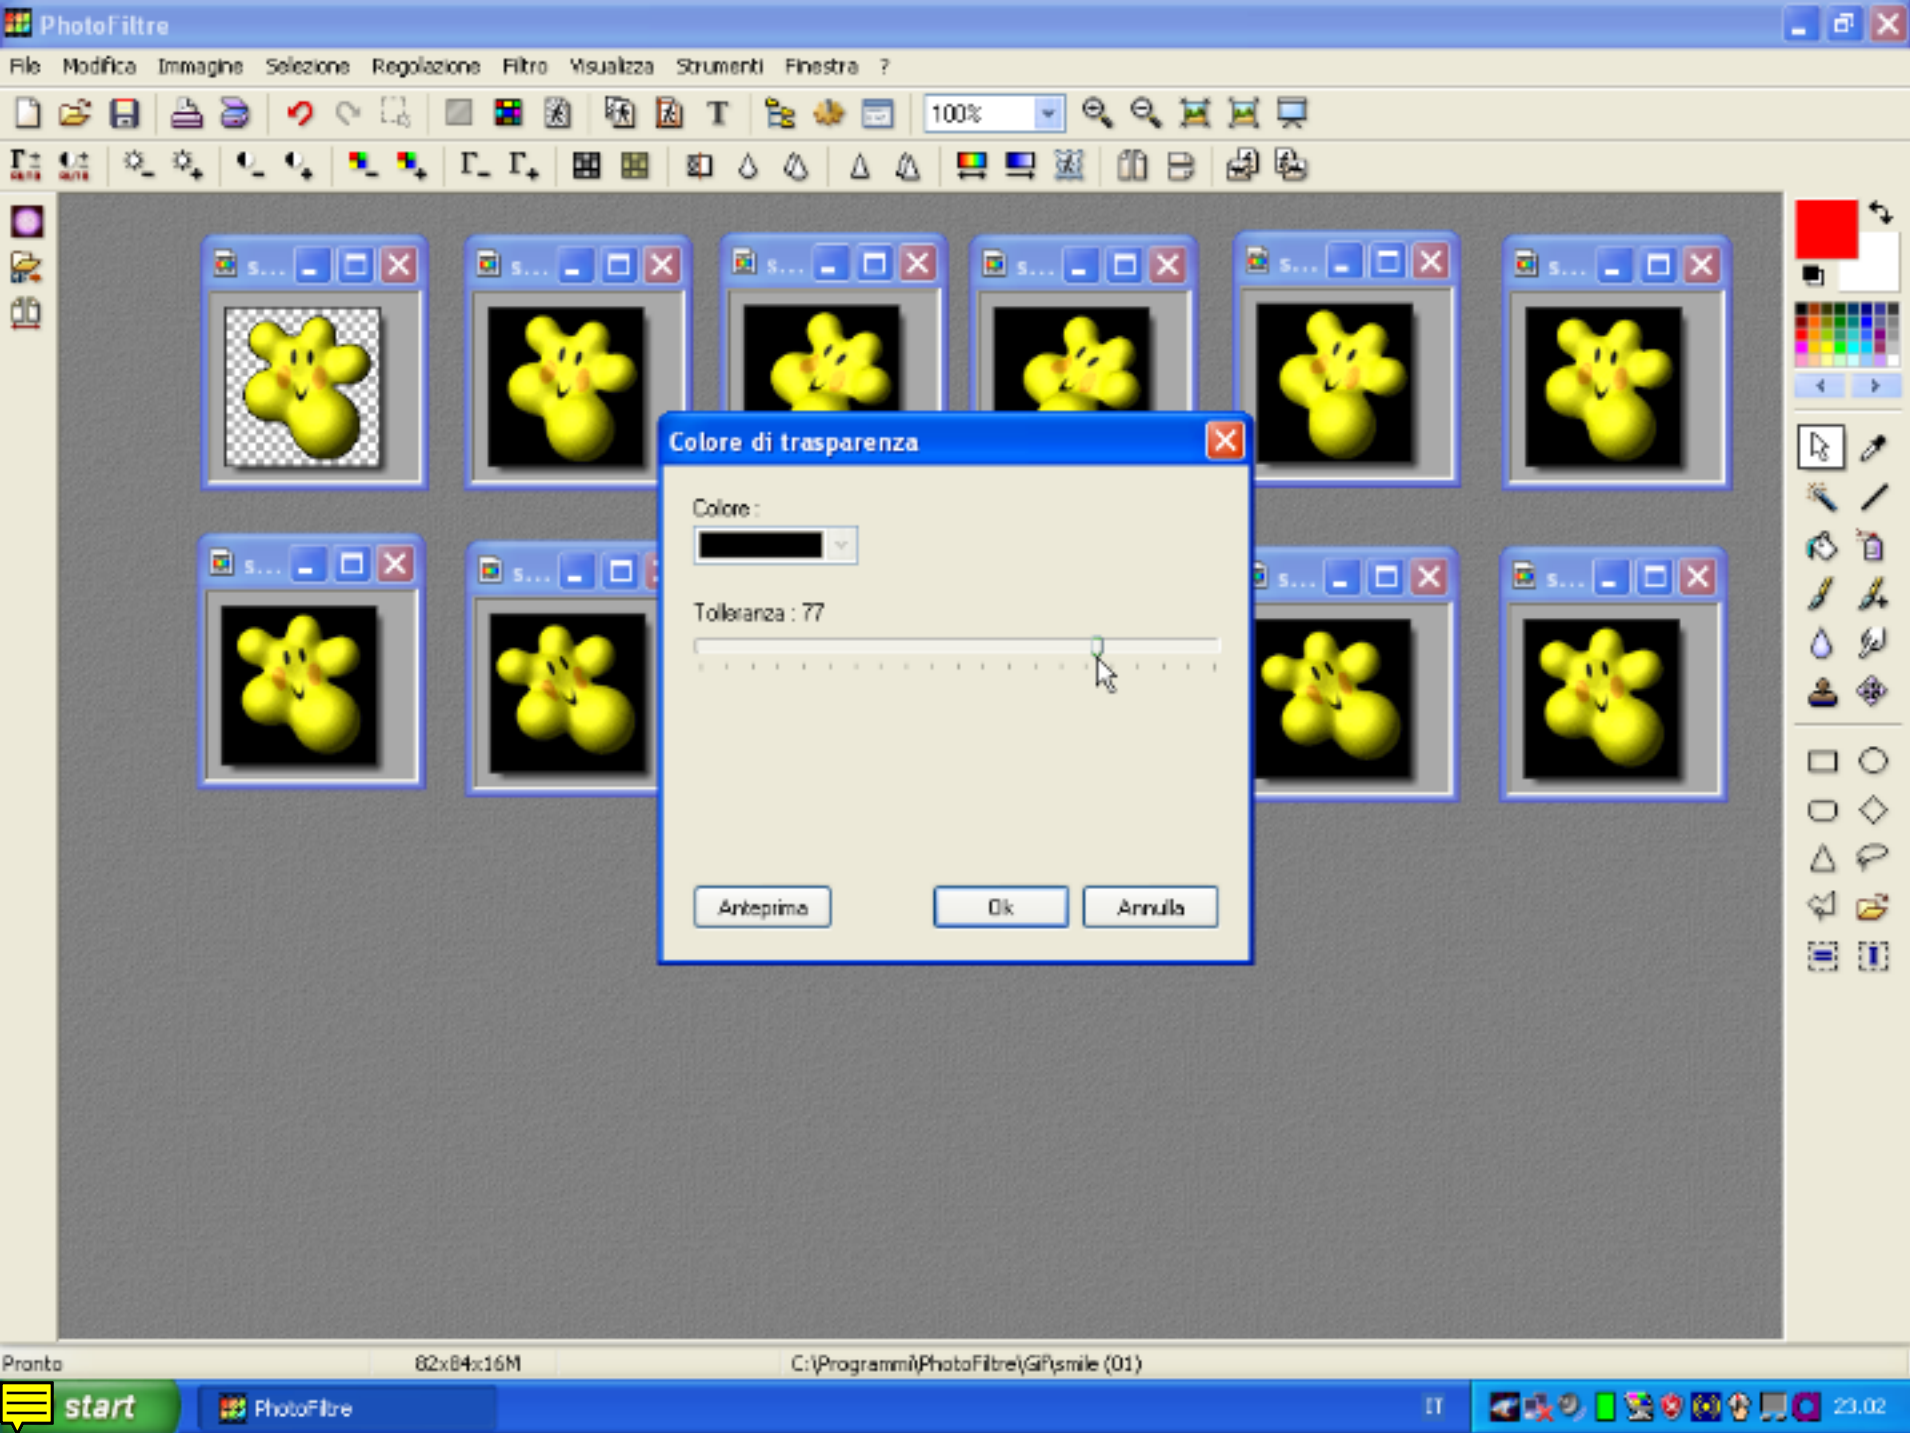

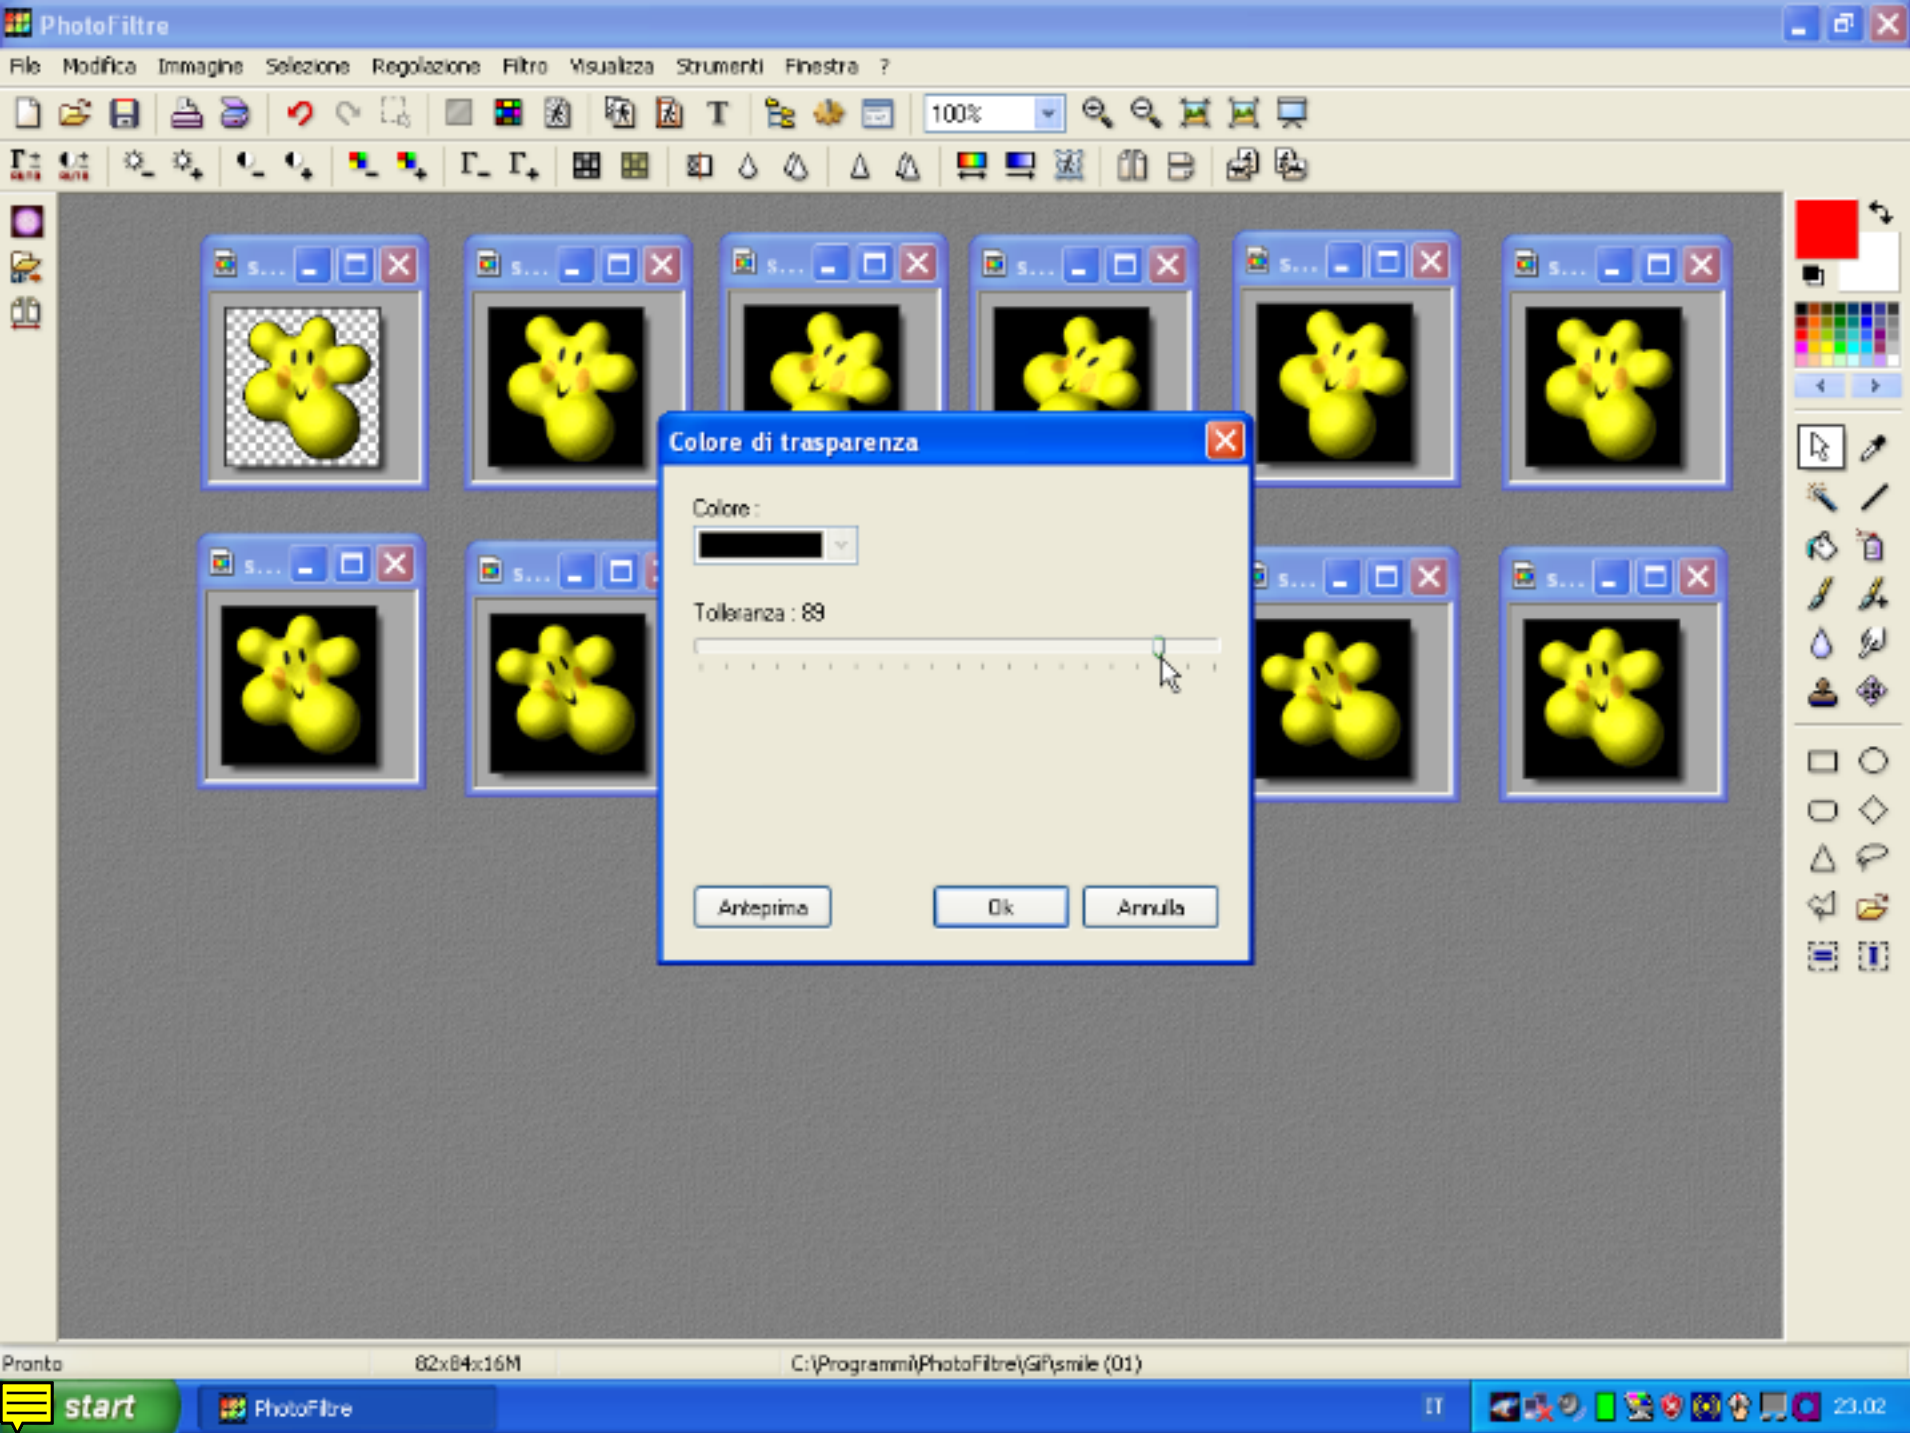

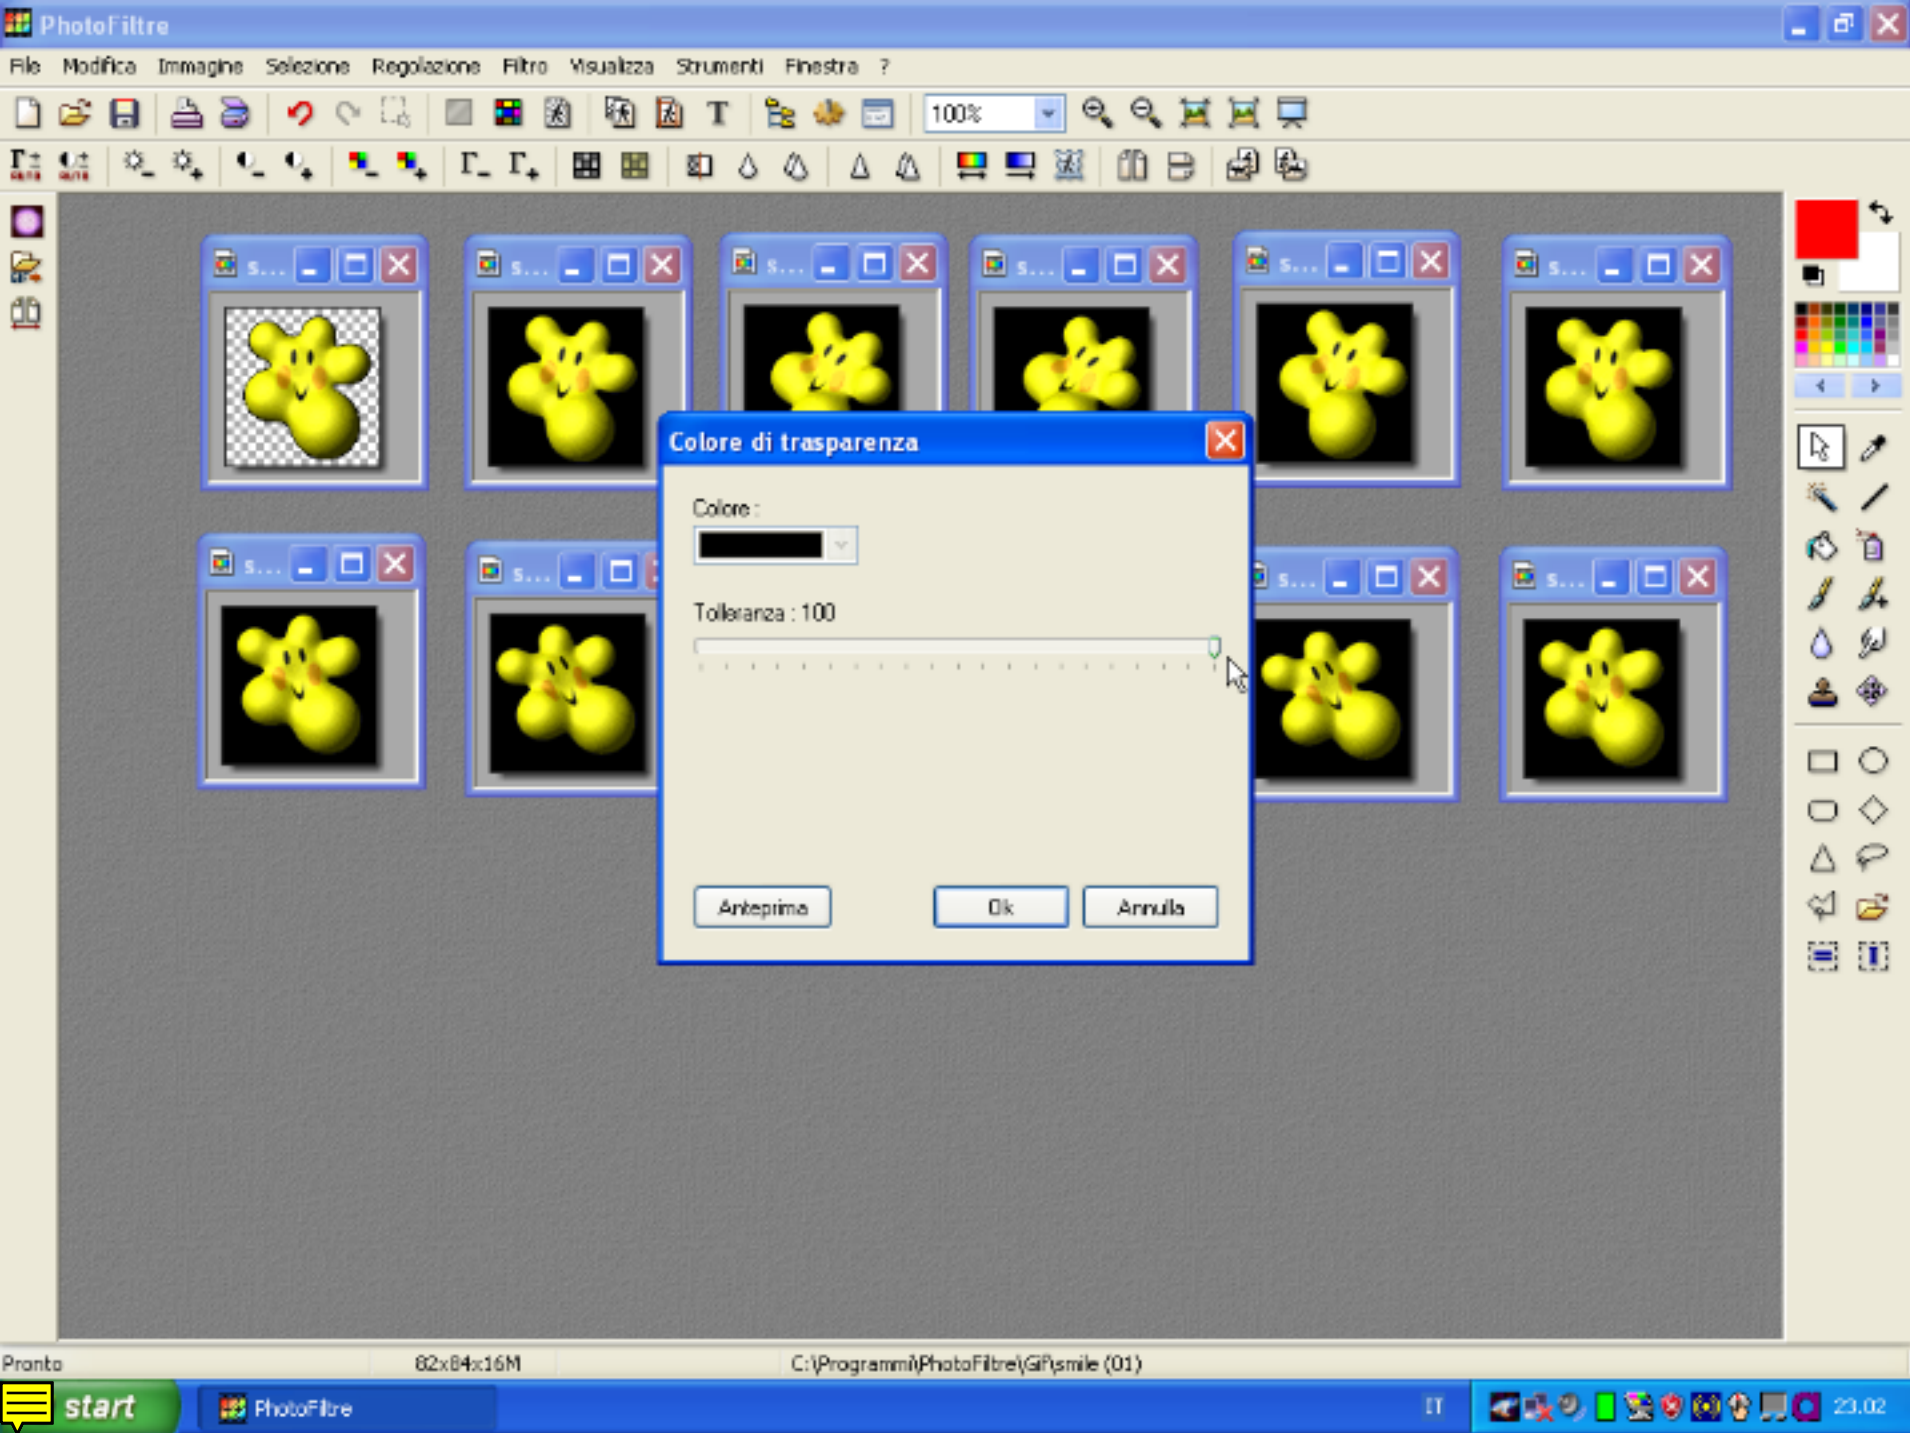

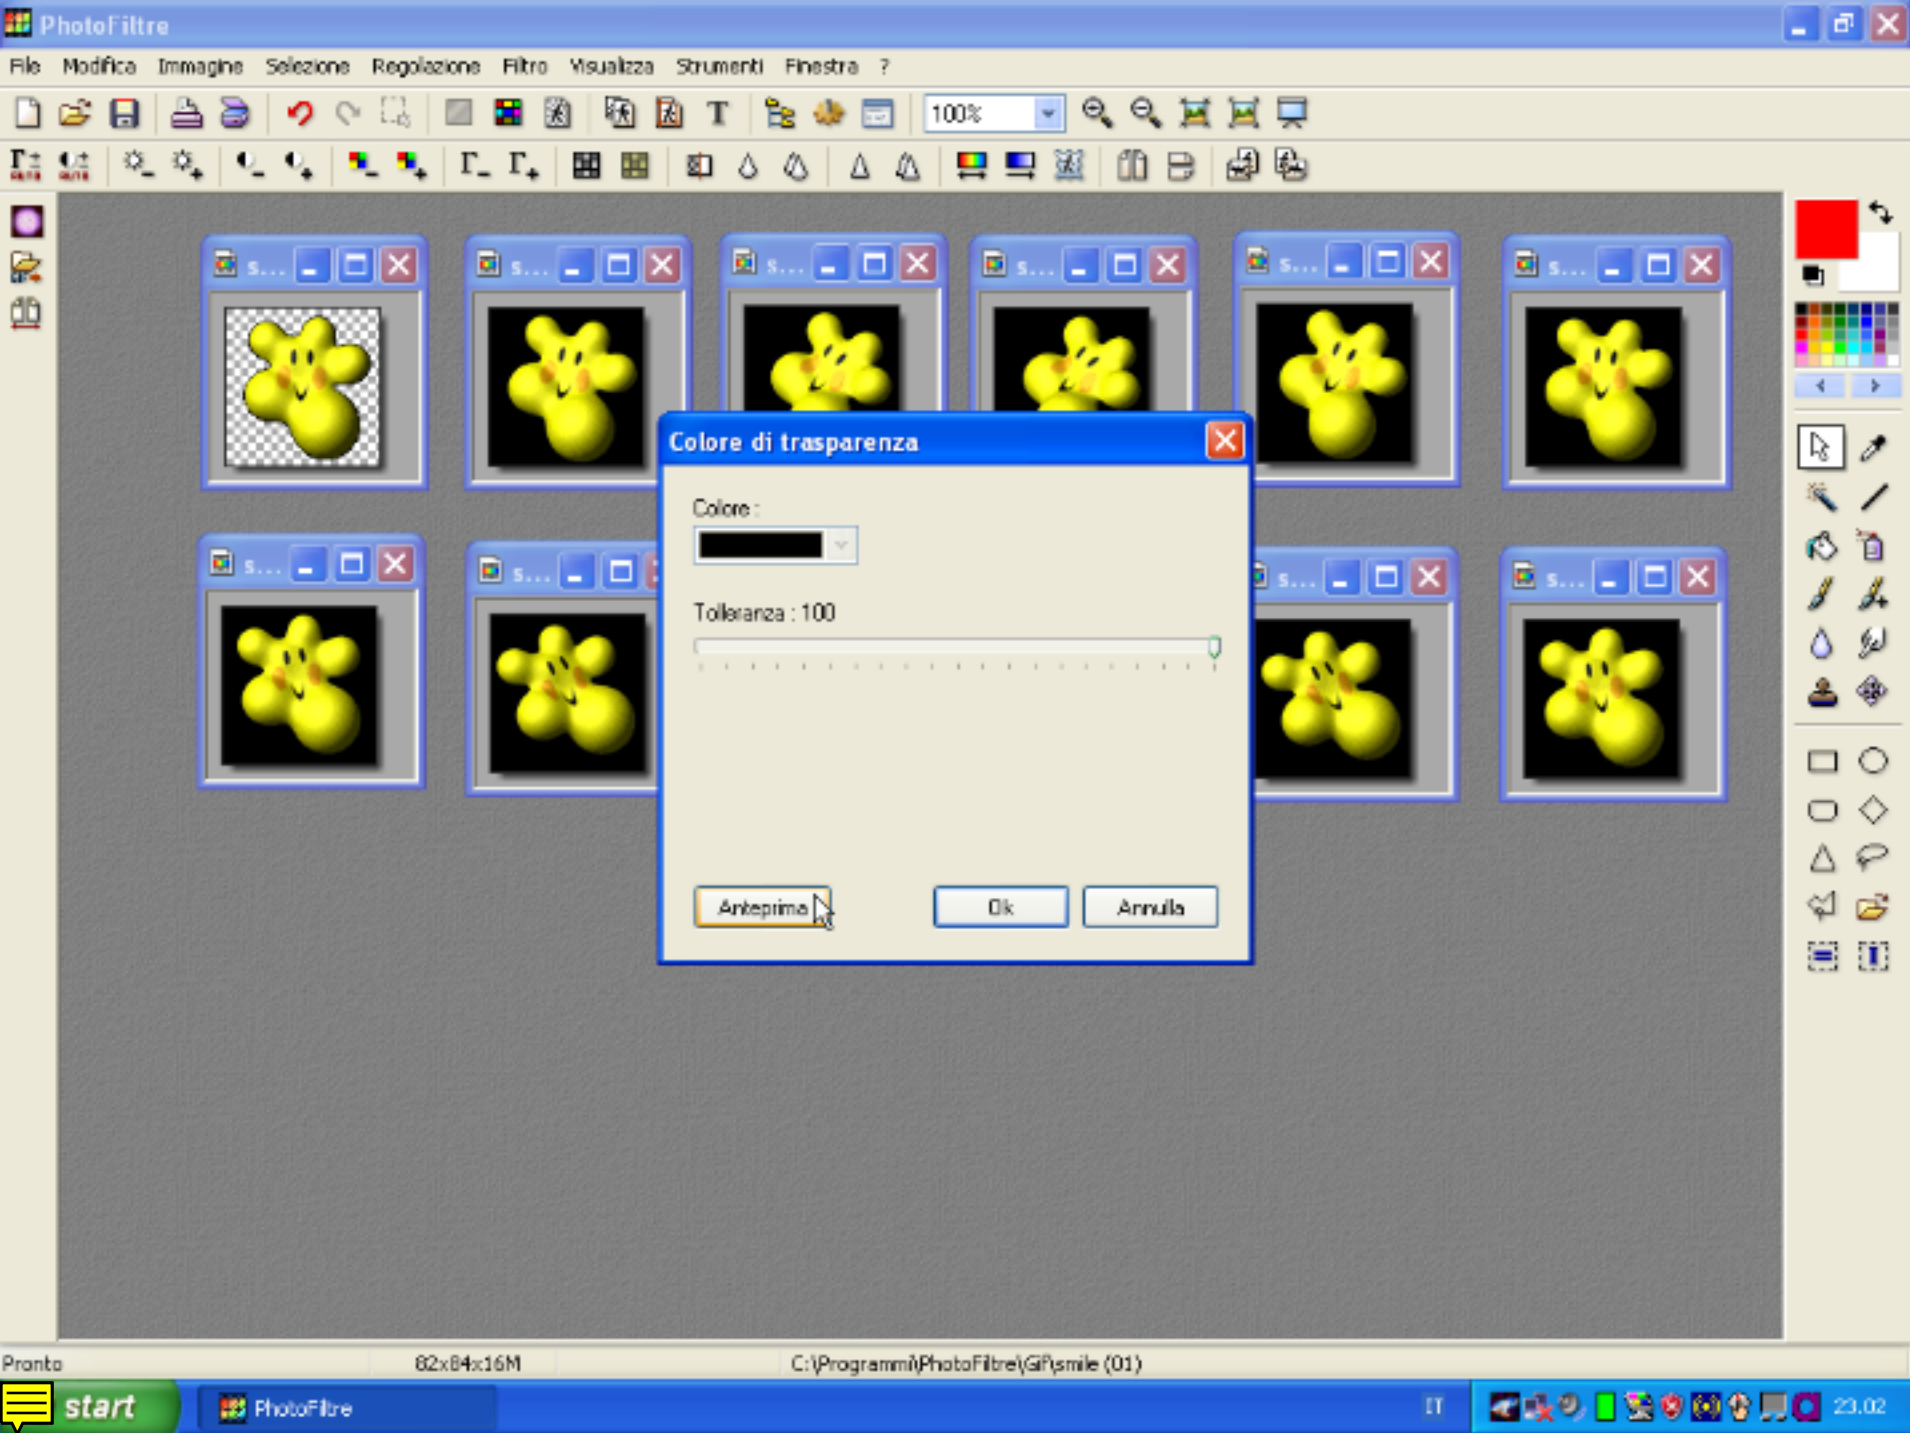

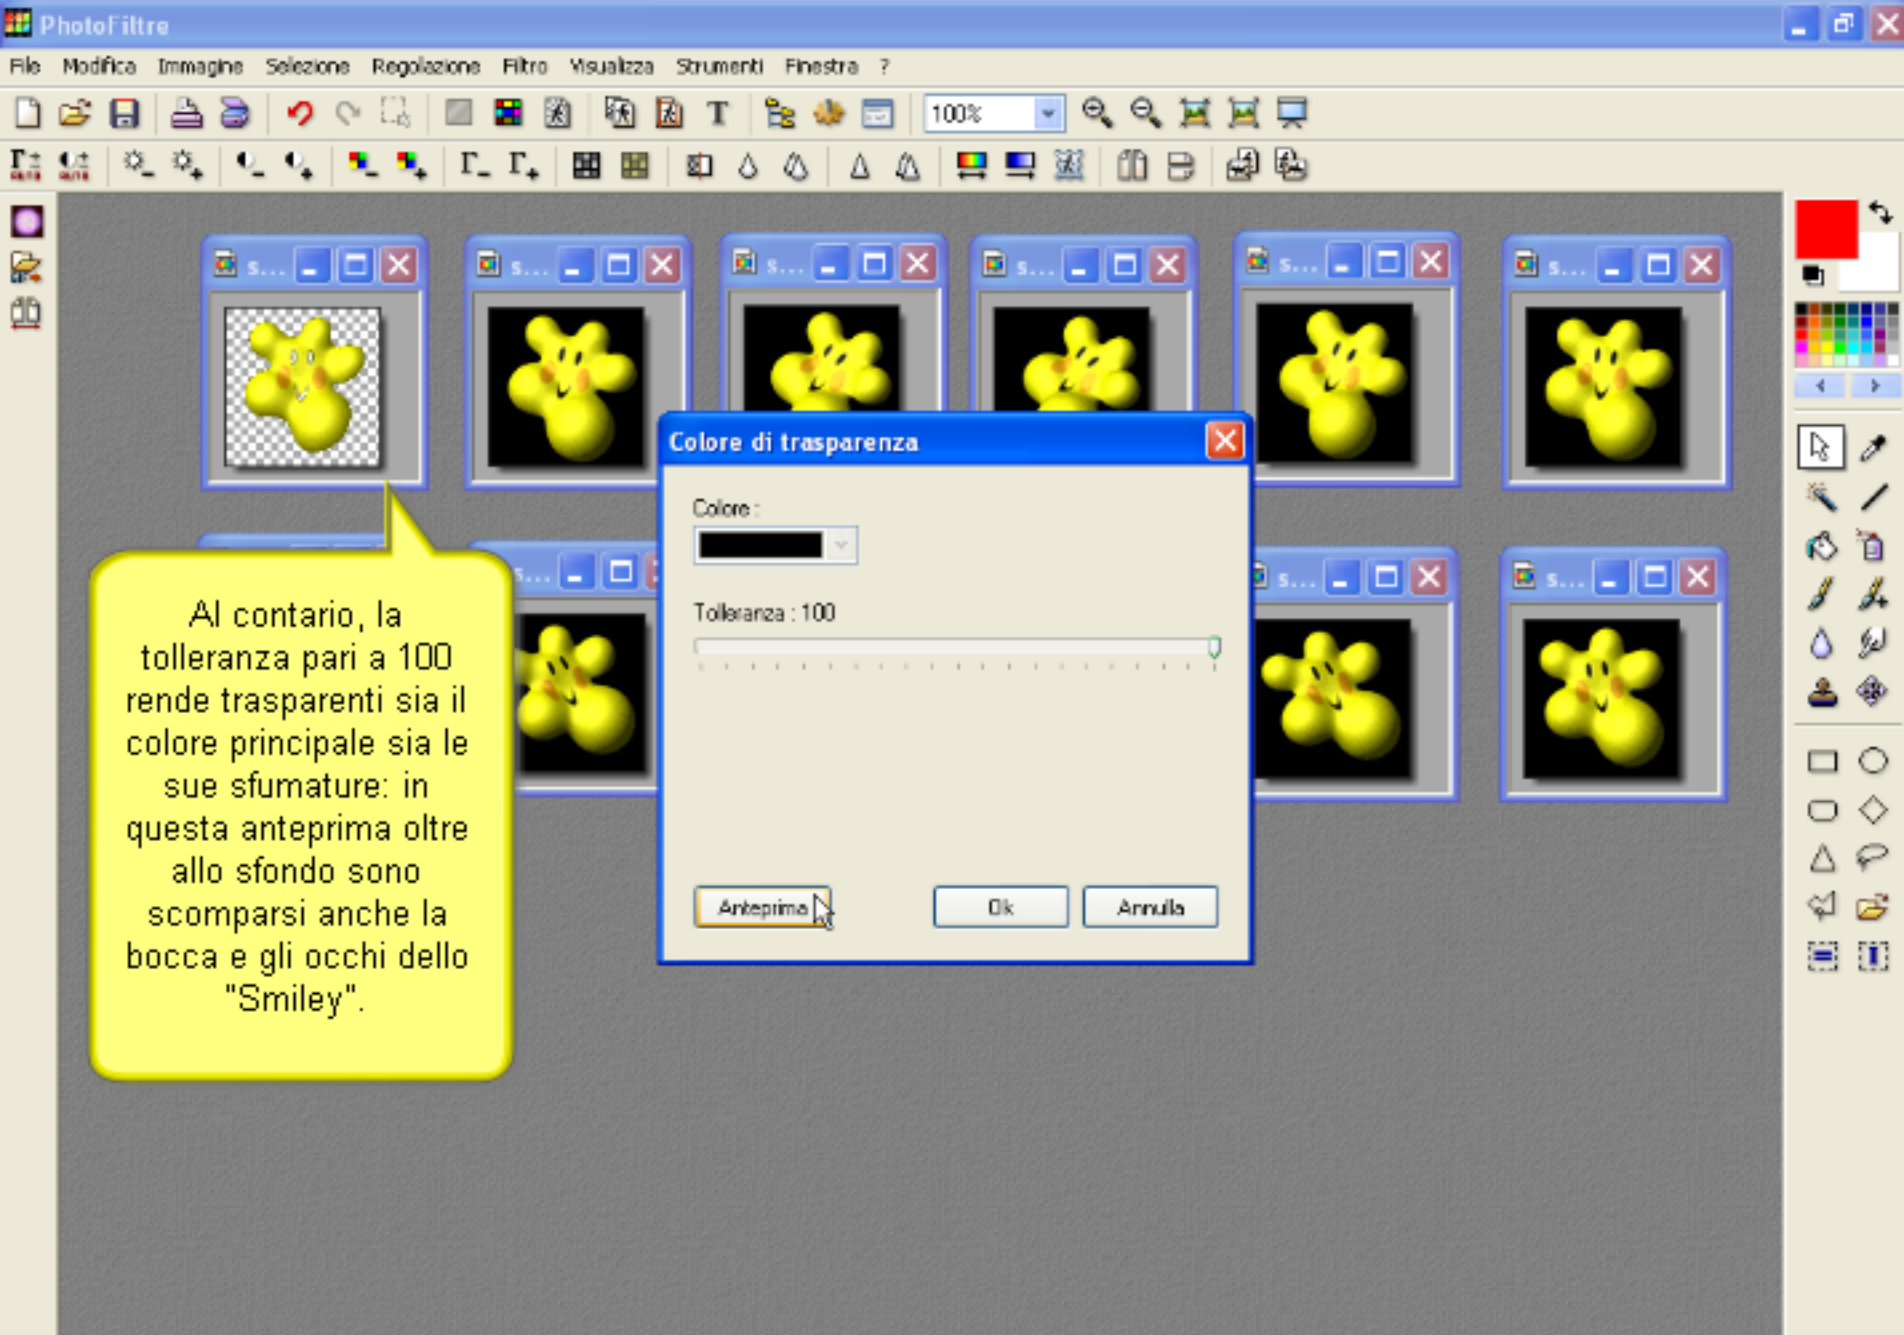

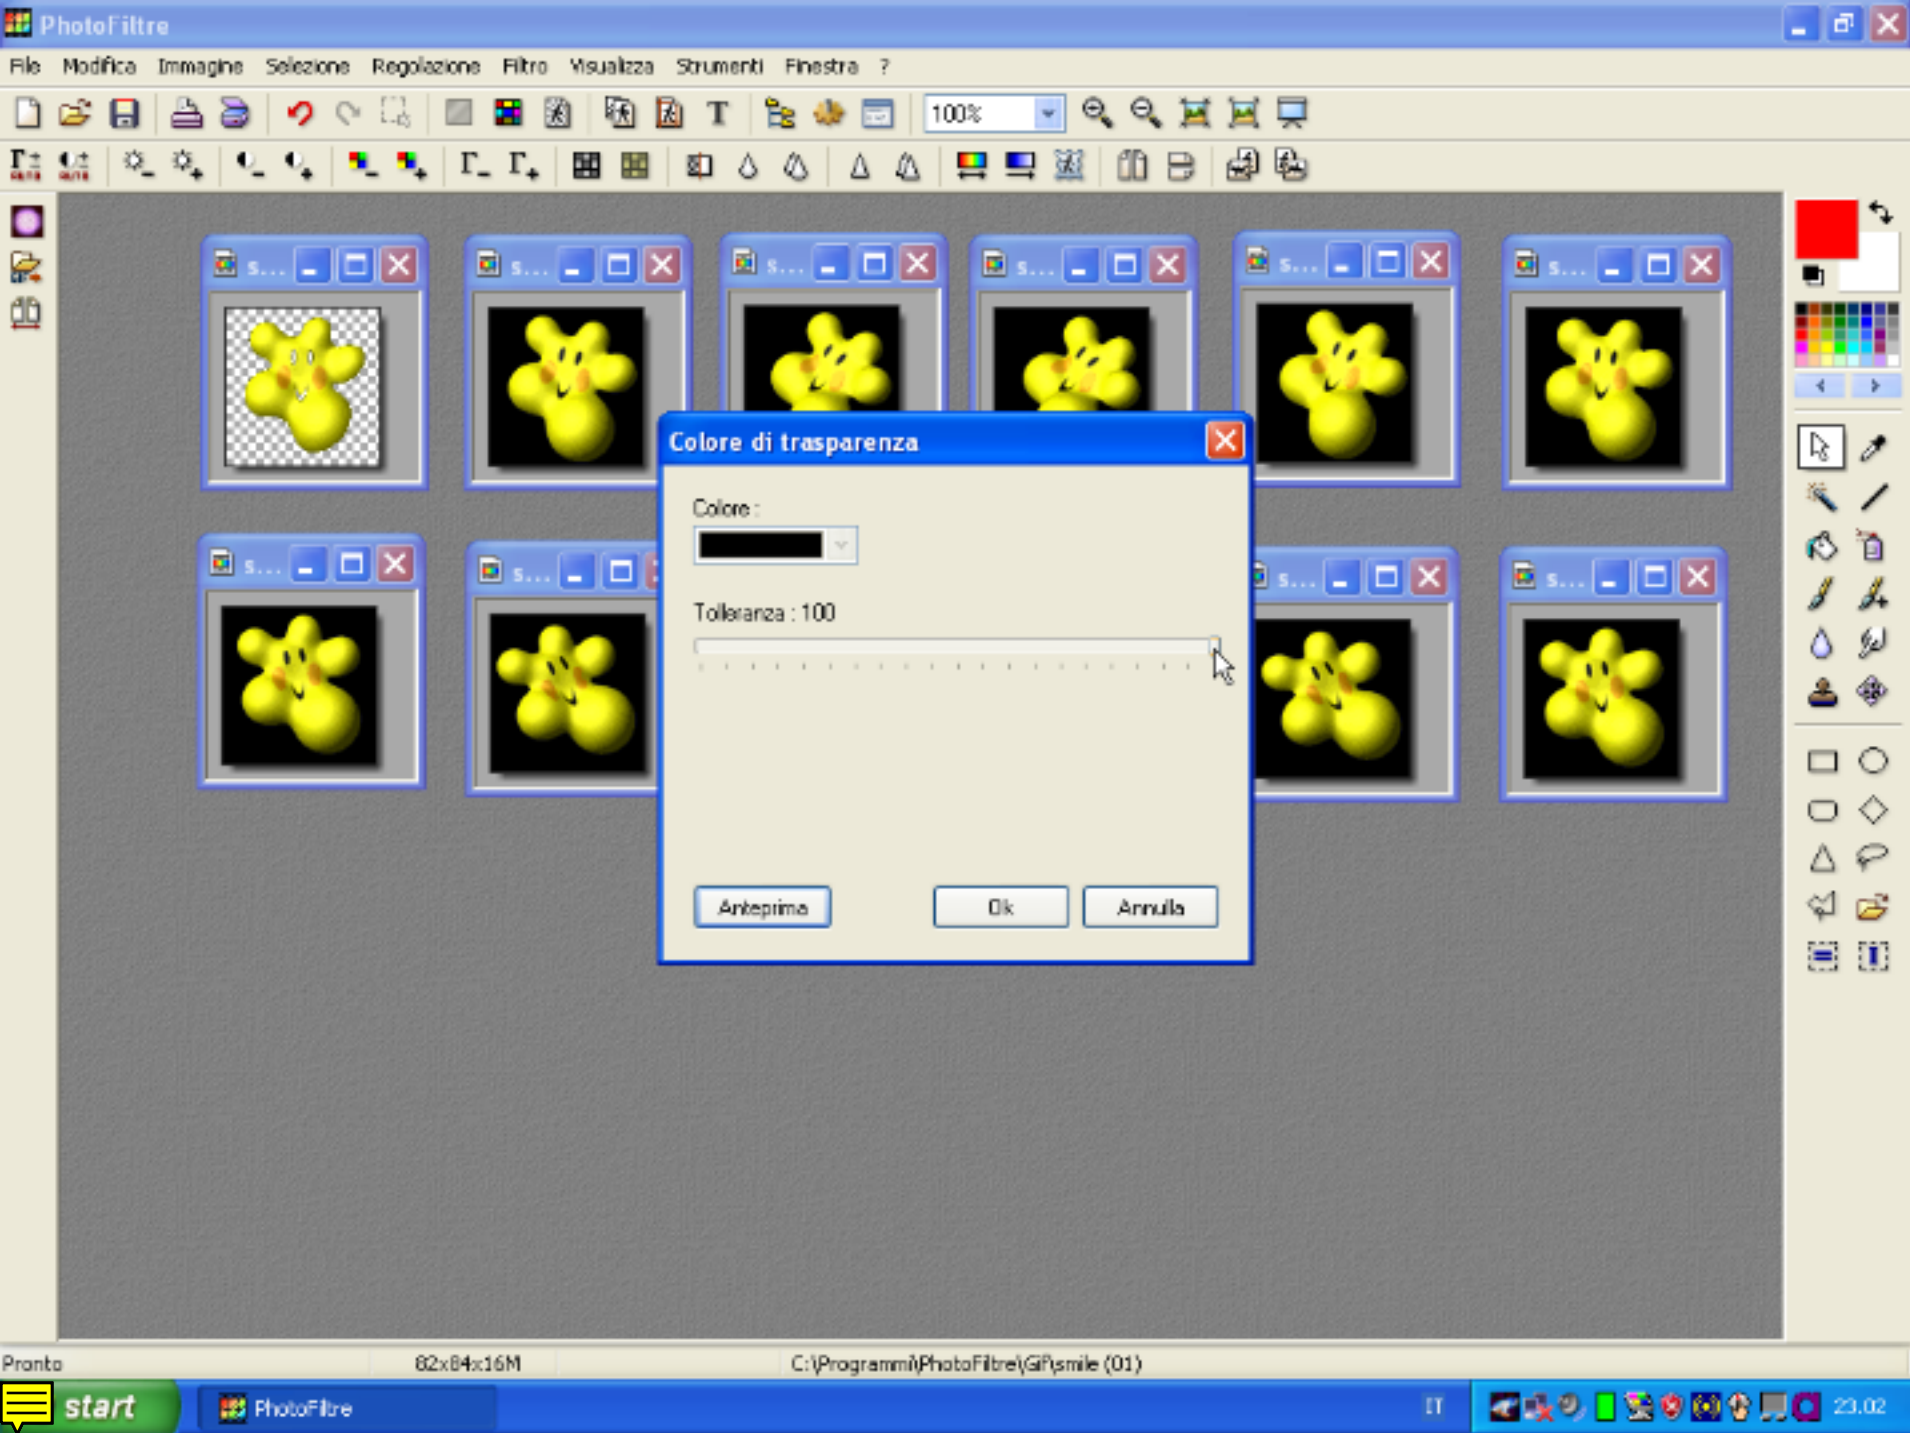

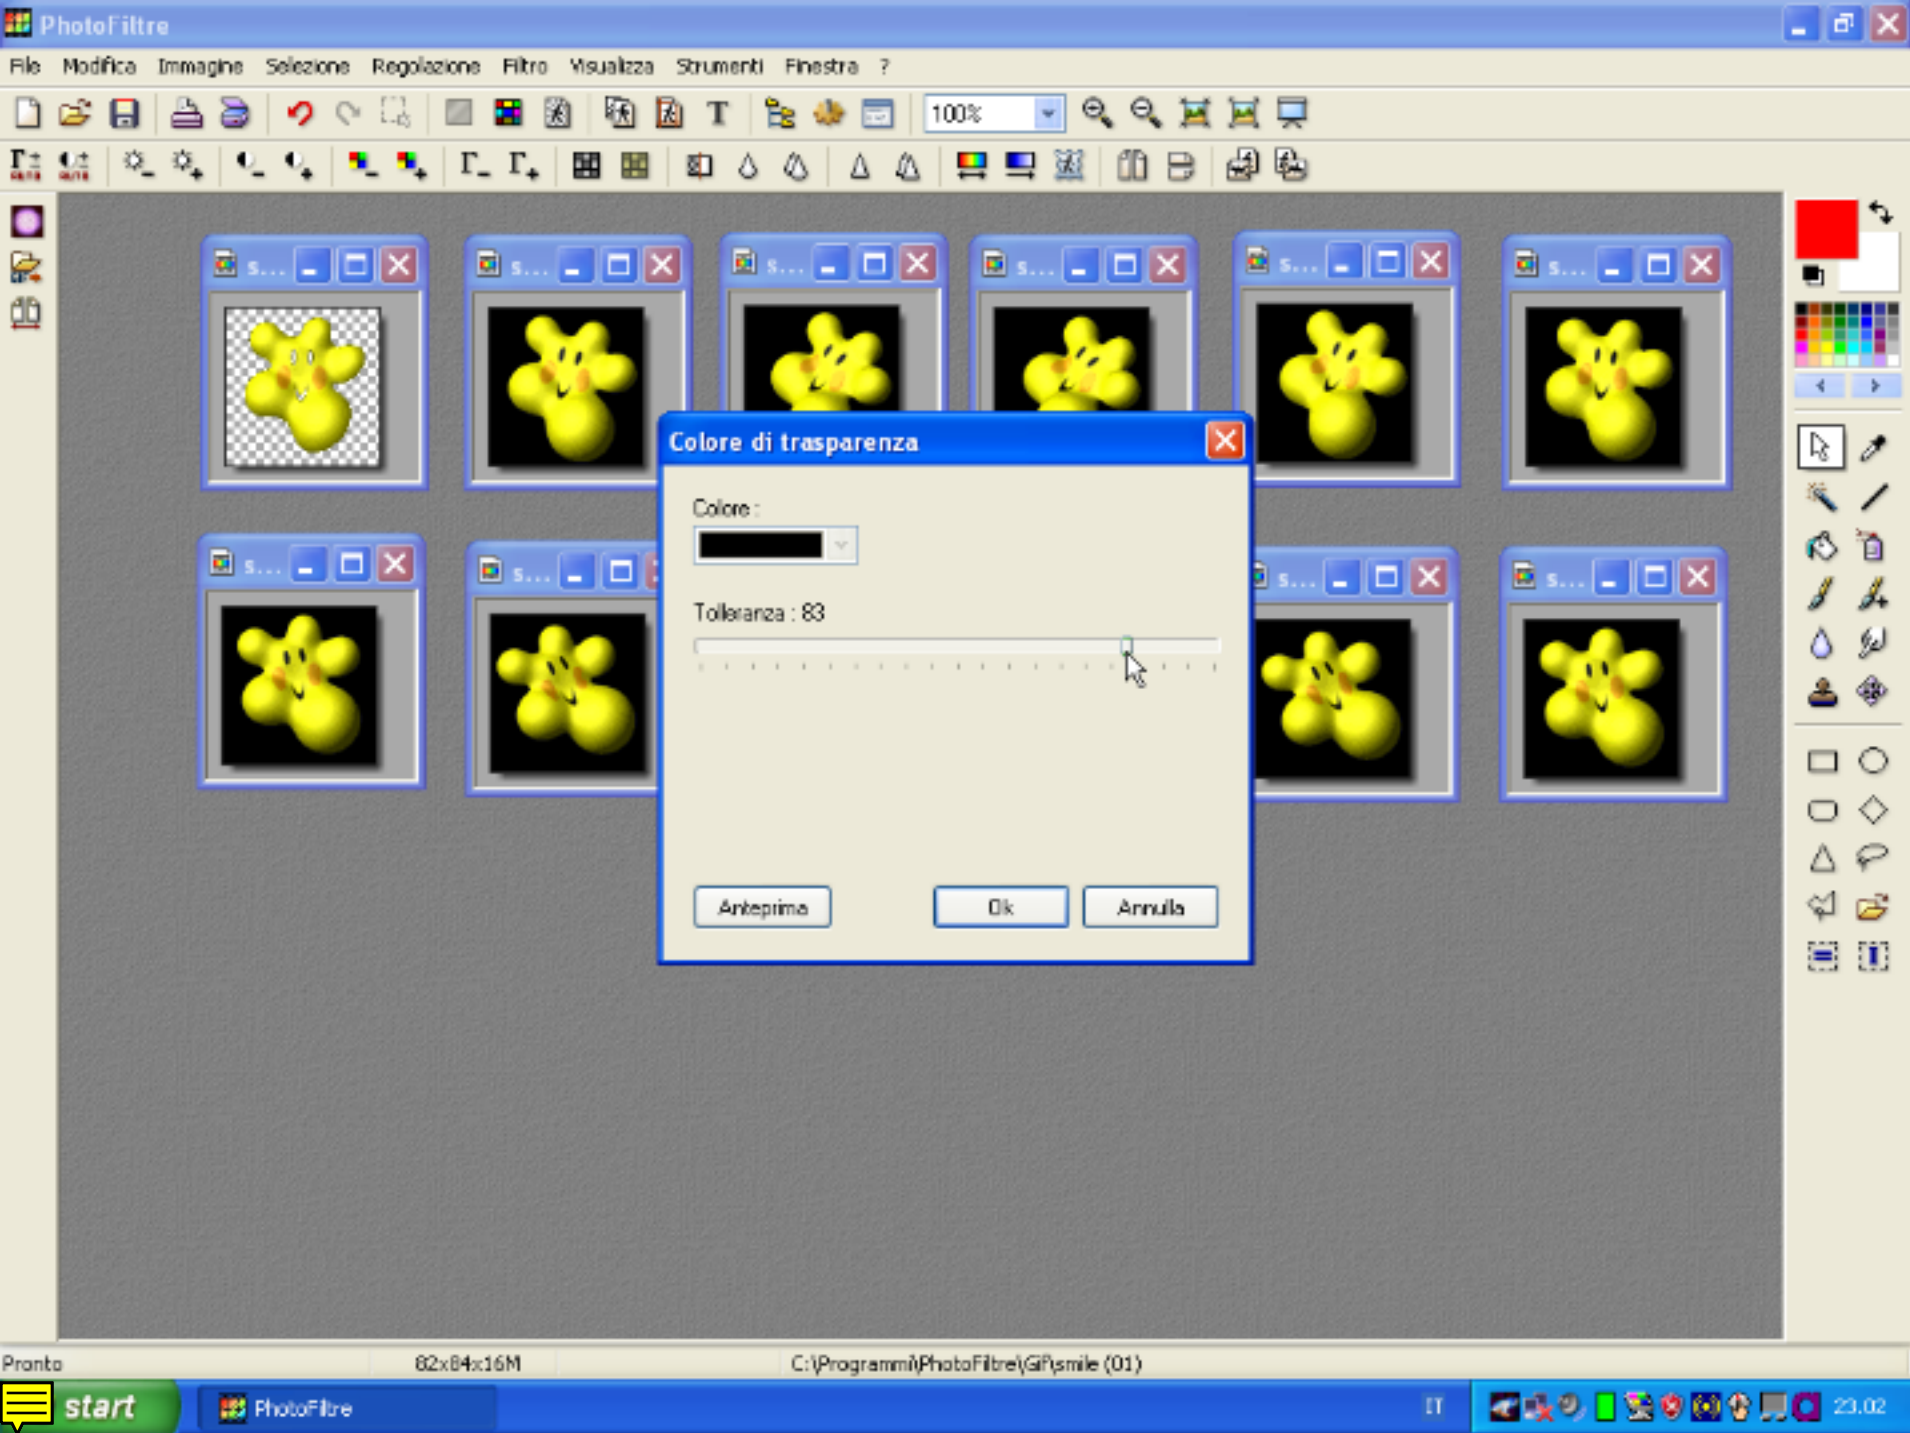

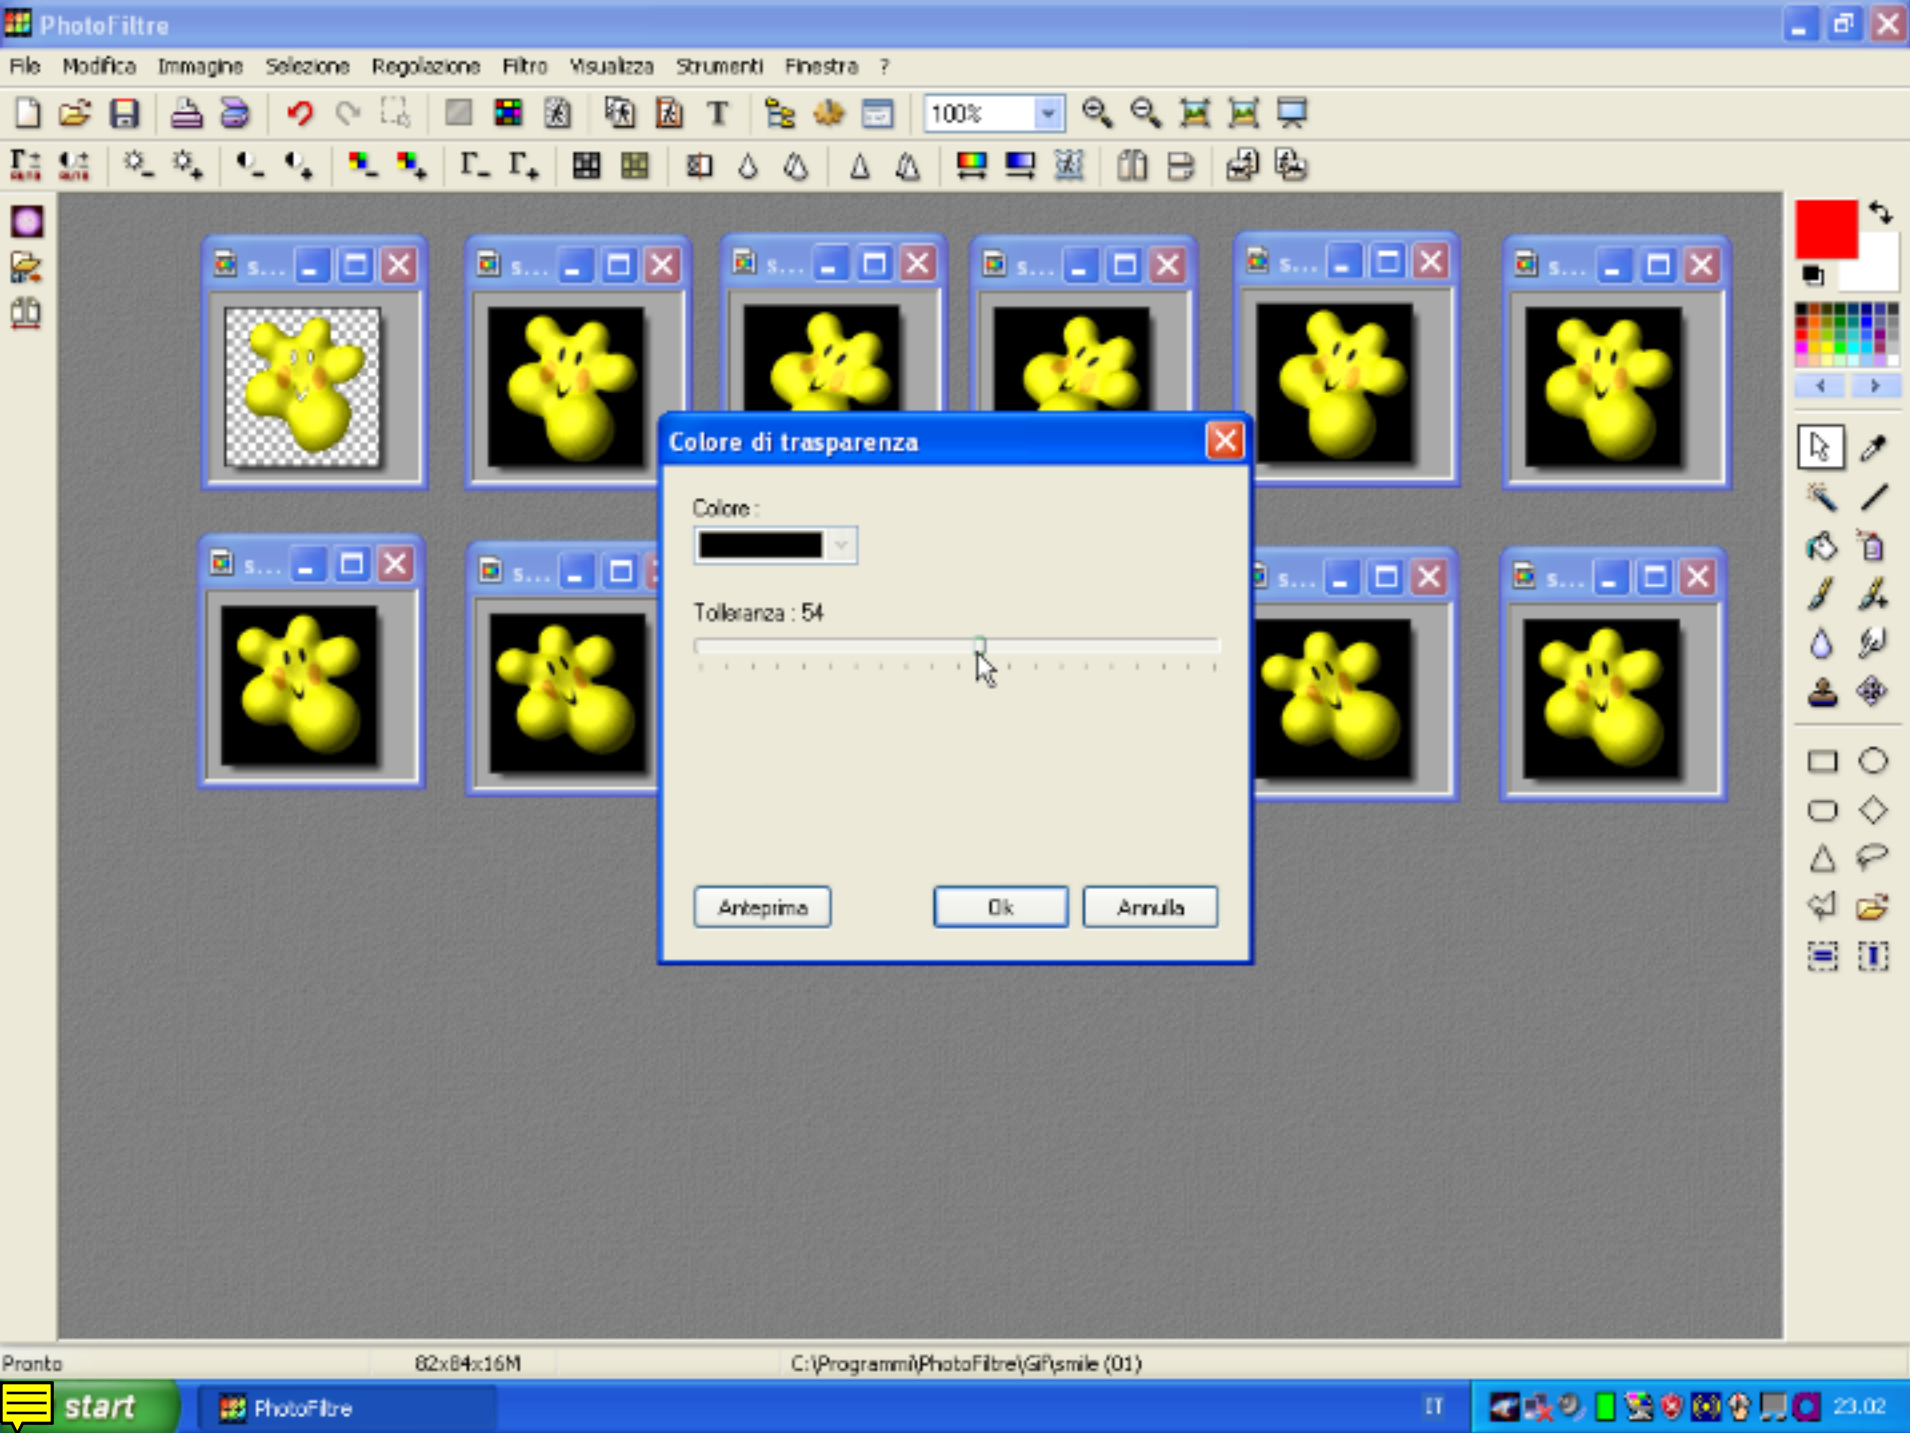

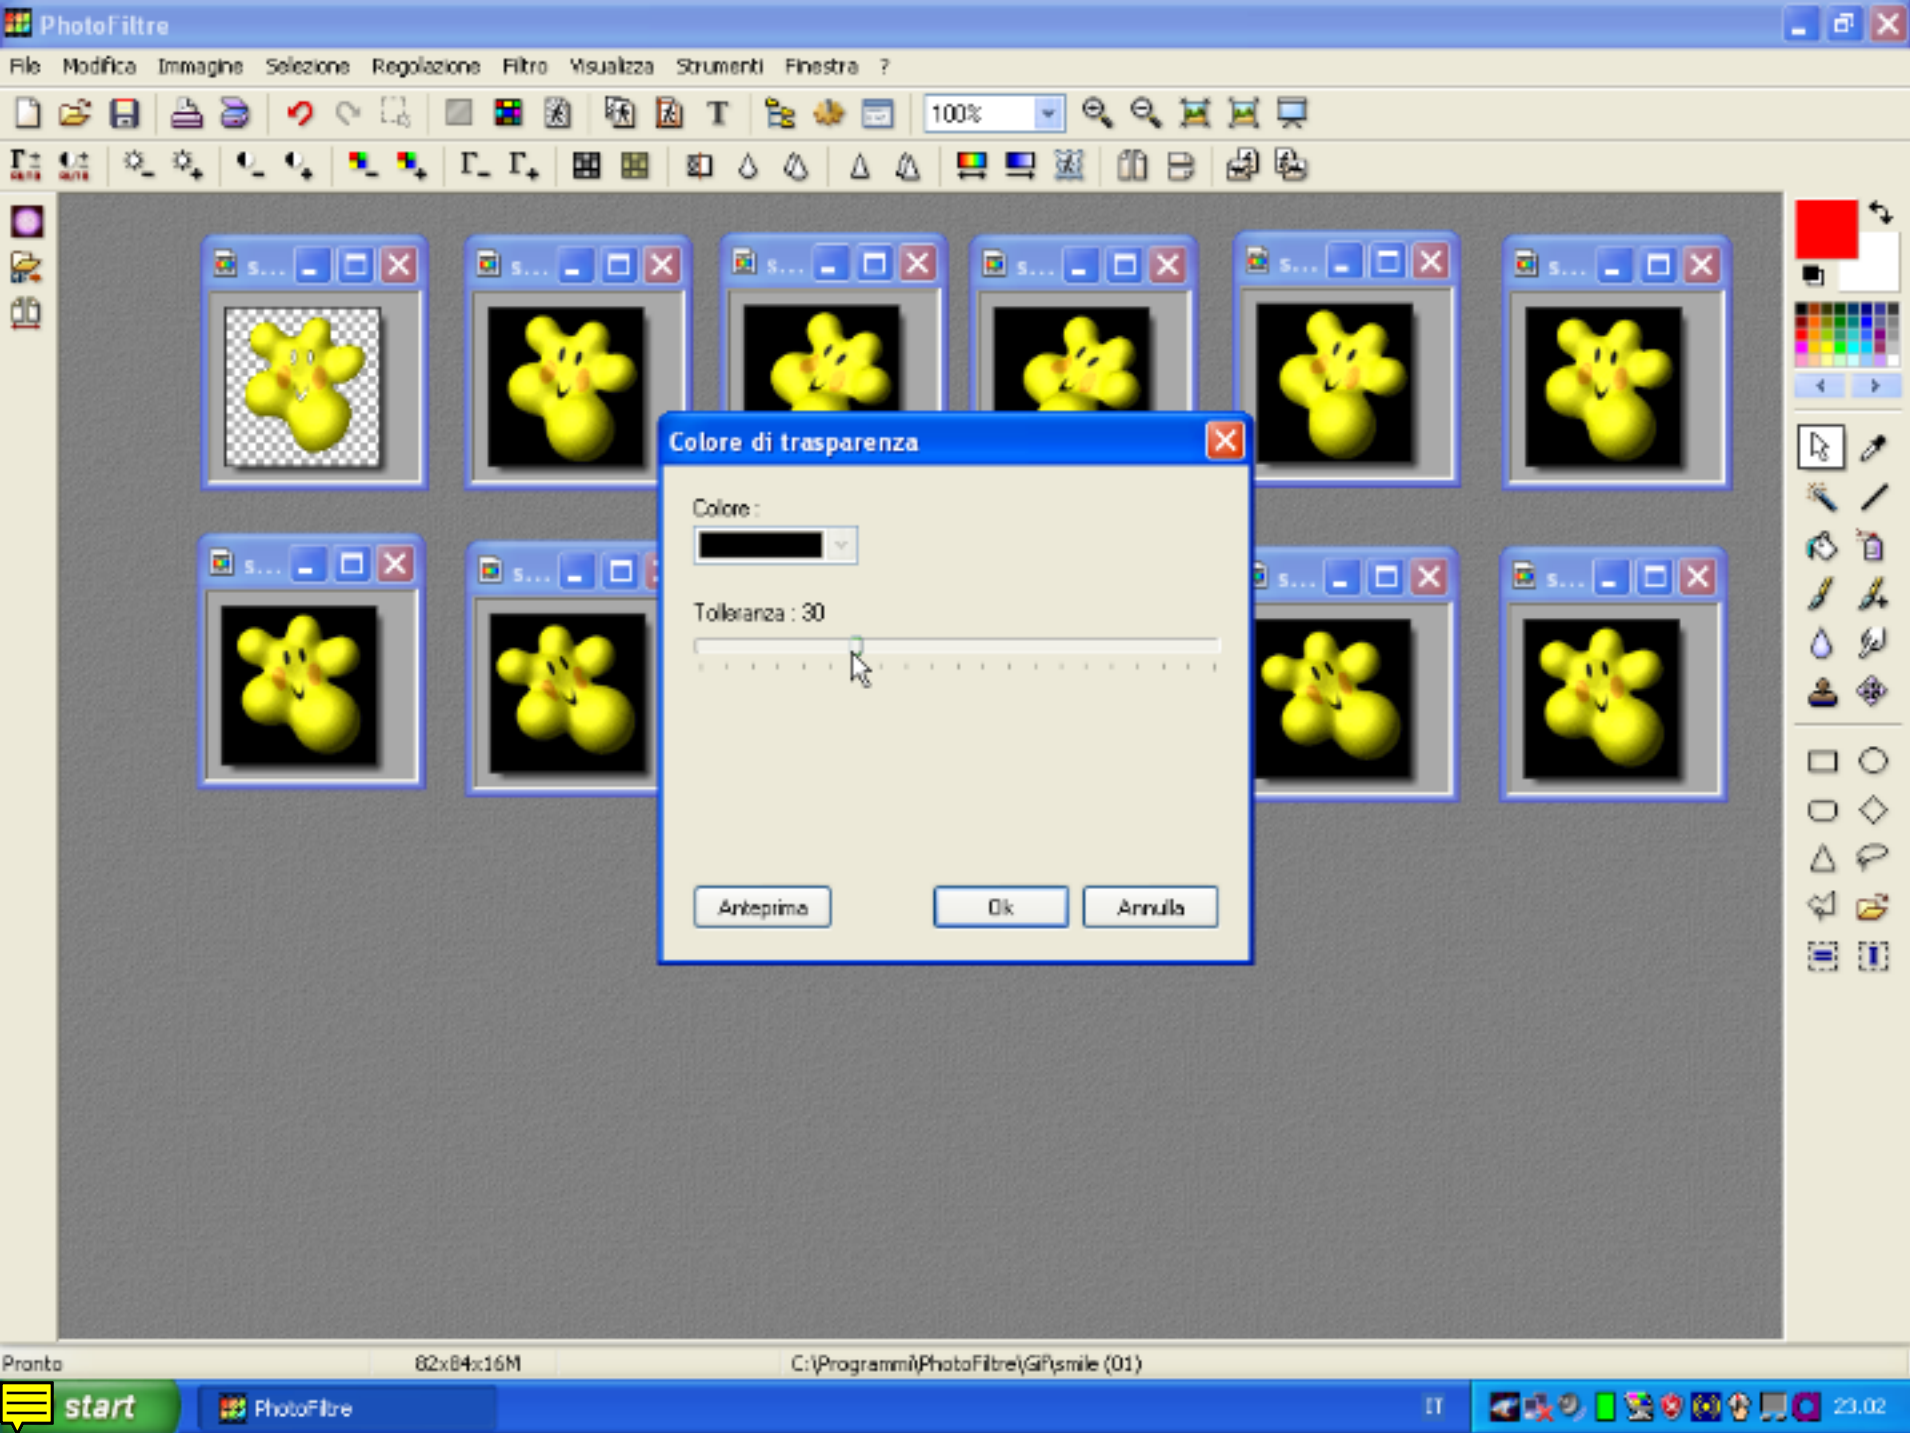

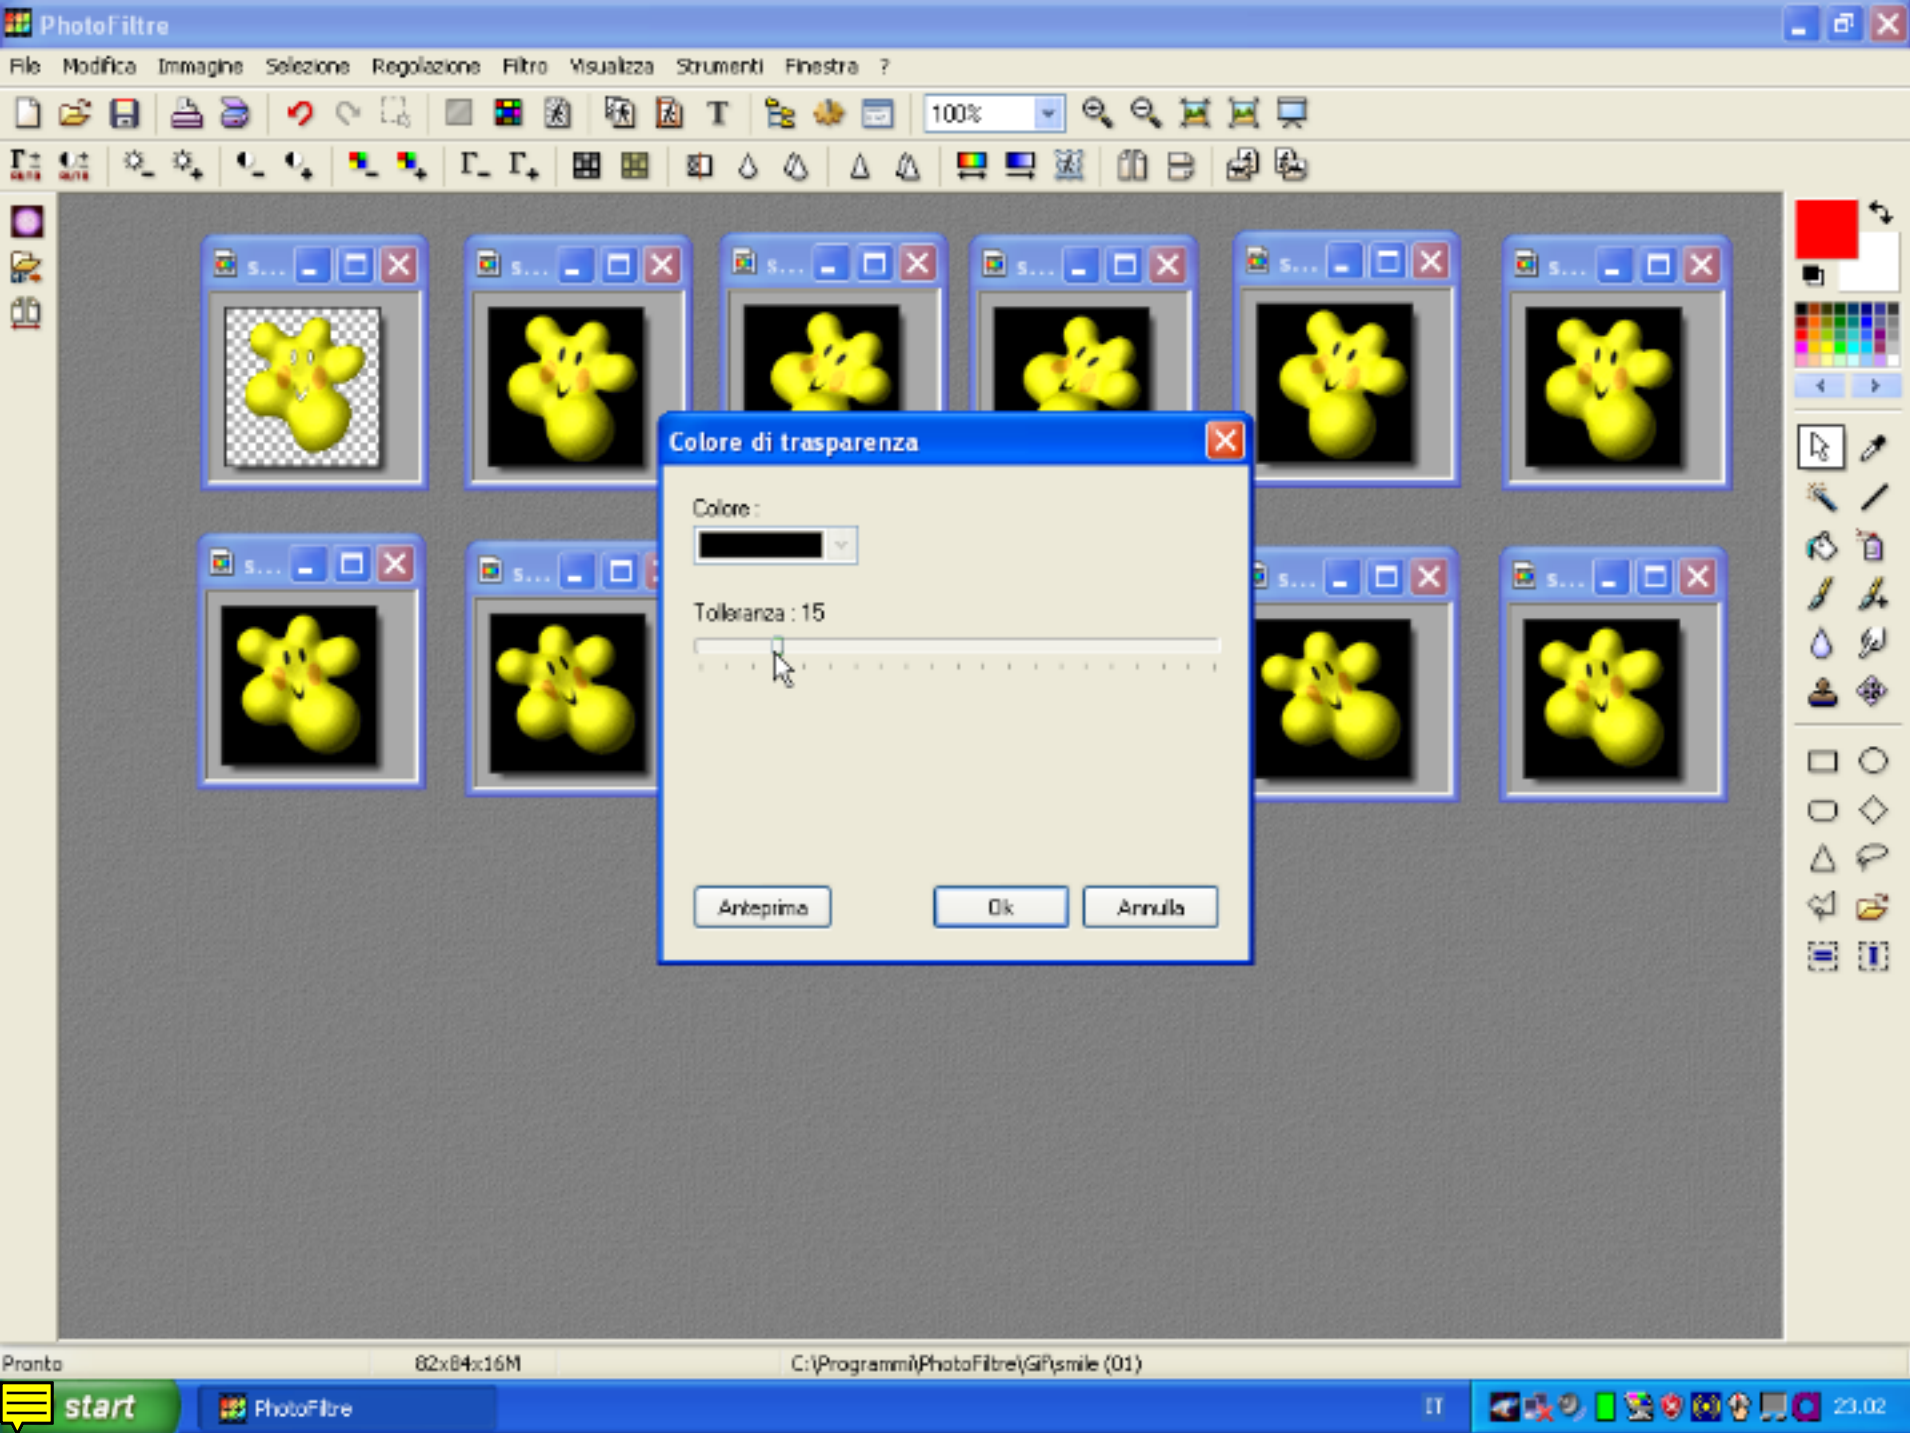

Al contrario, la tolleranza pari a 100 rende trasparenti sia il colore principale sia le sue sfumature: in questa anteprima oltre allo sfondo sono scomparsi anche la bocca e gli occhi dello "Smiley".

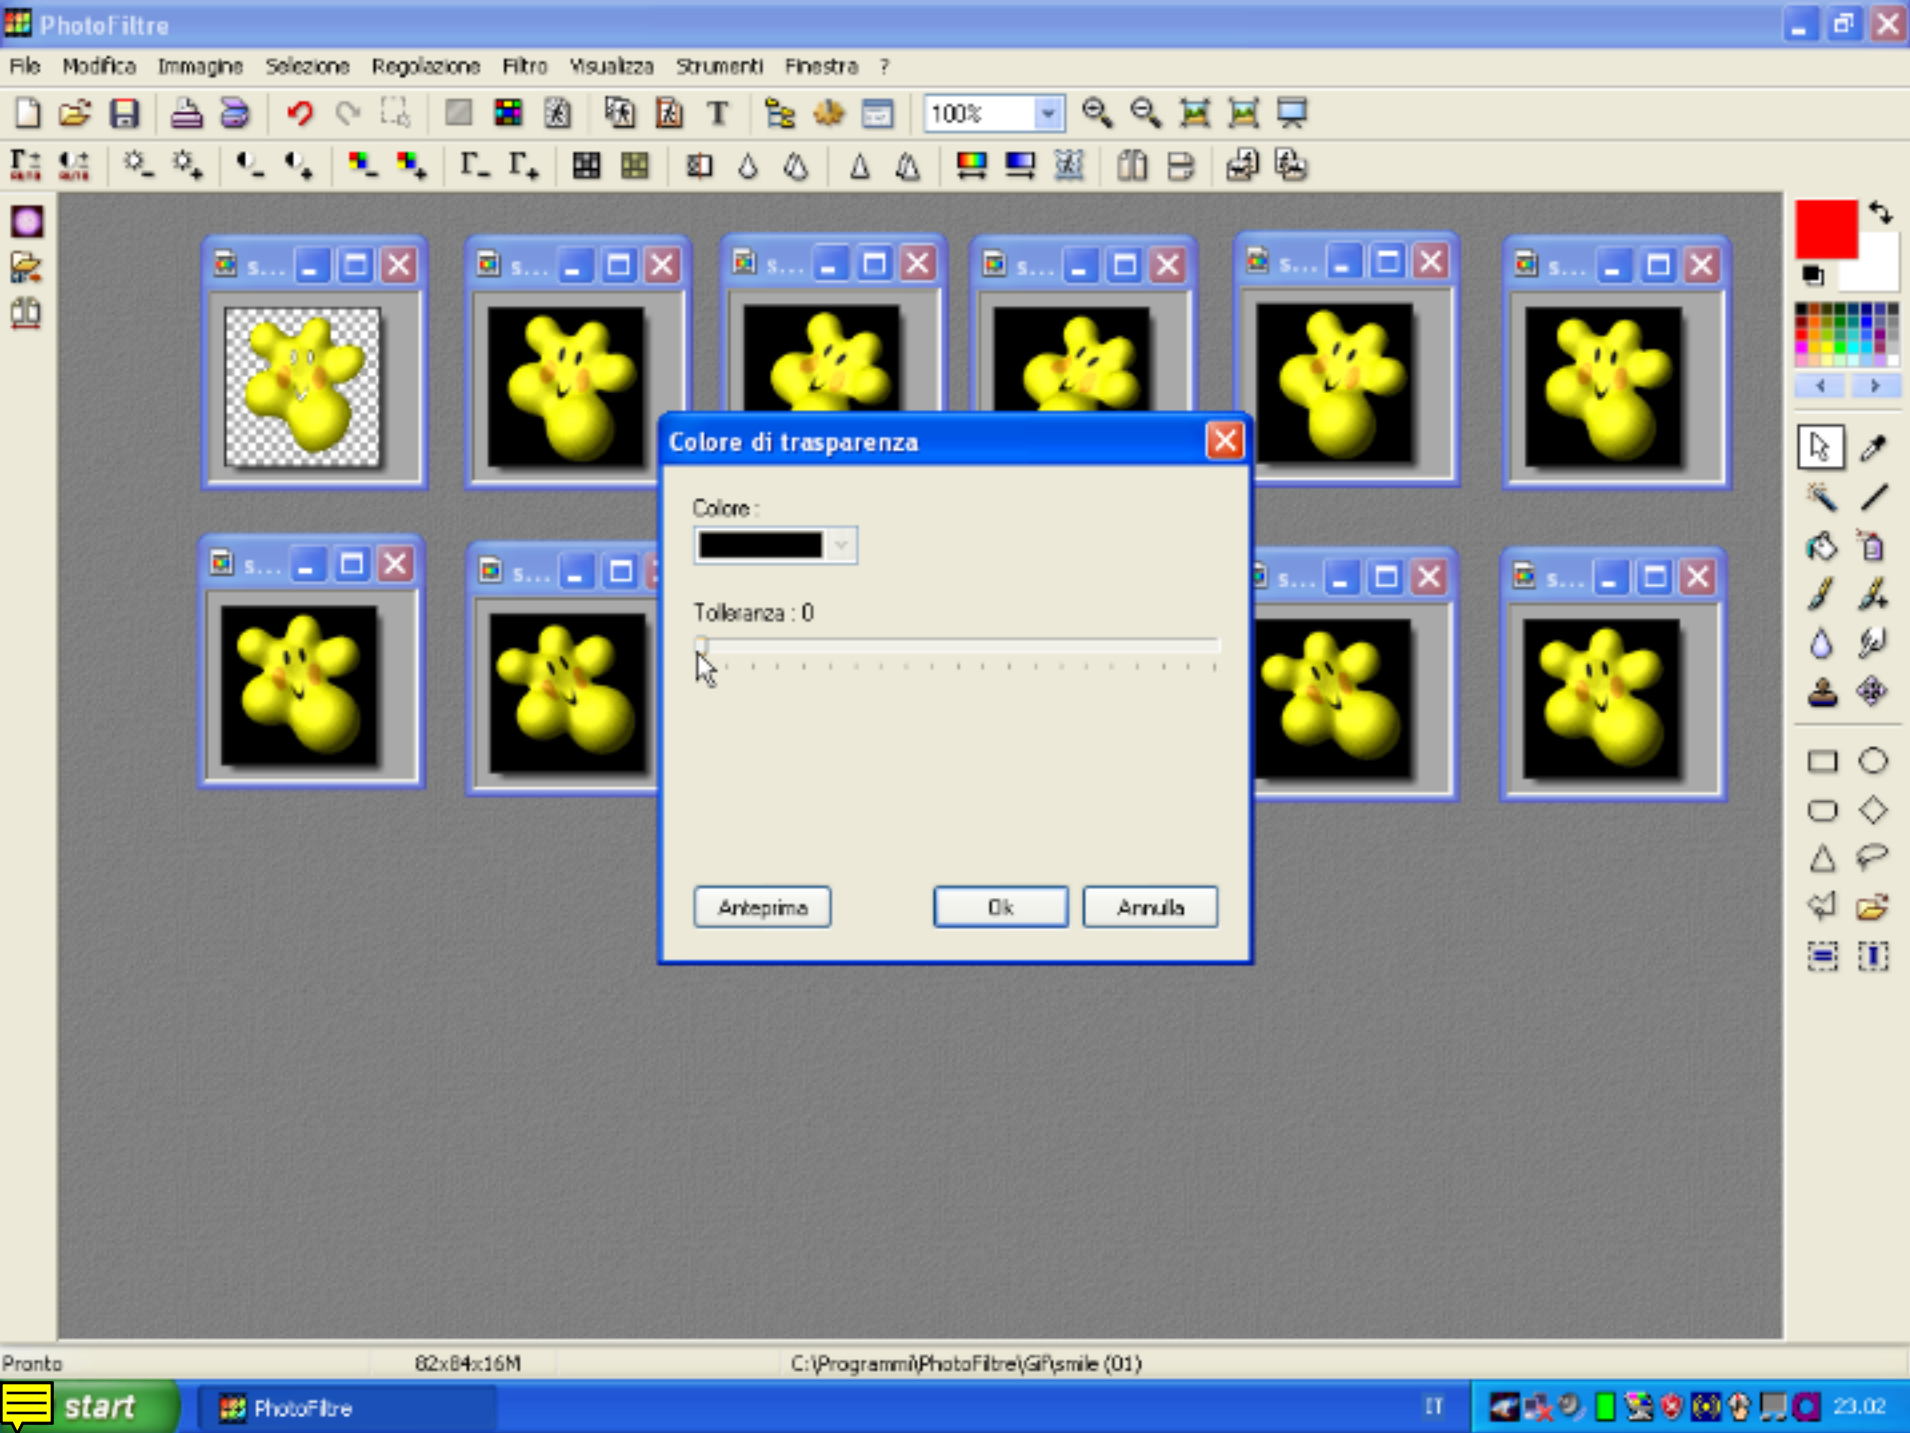

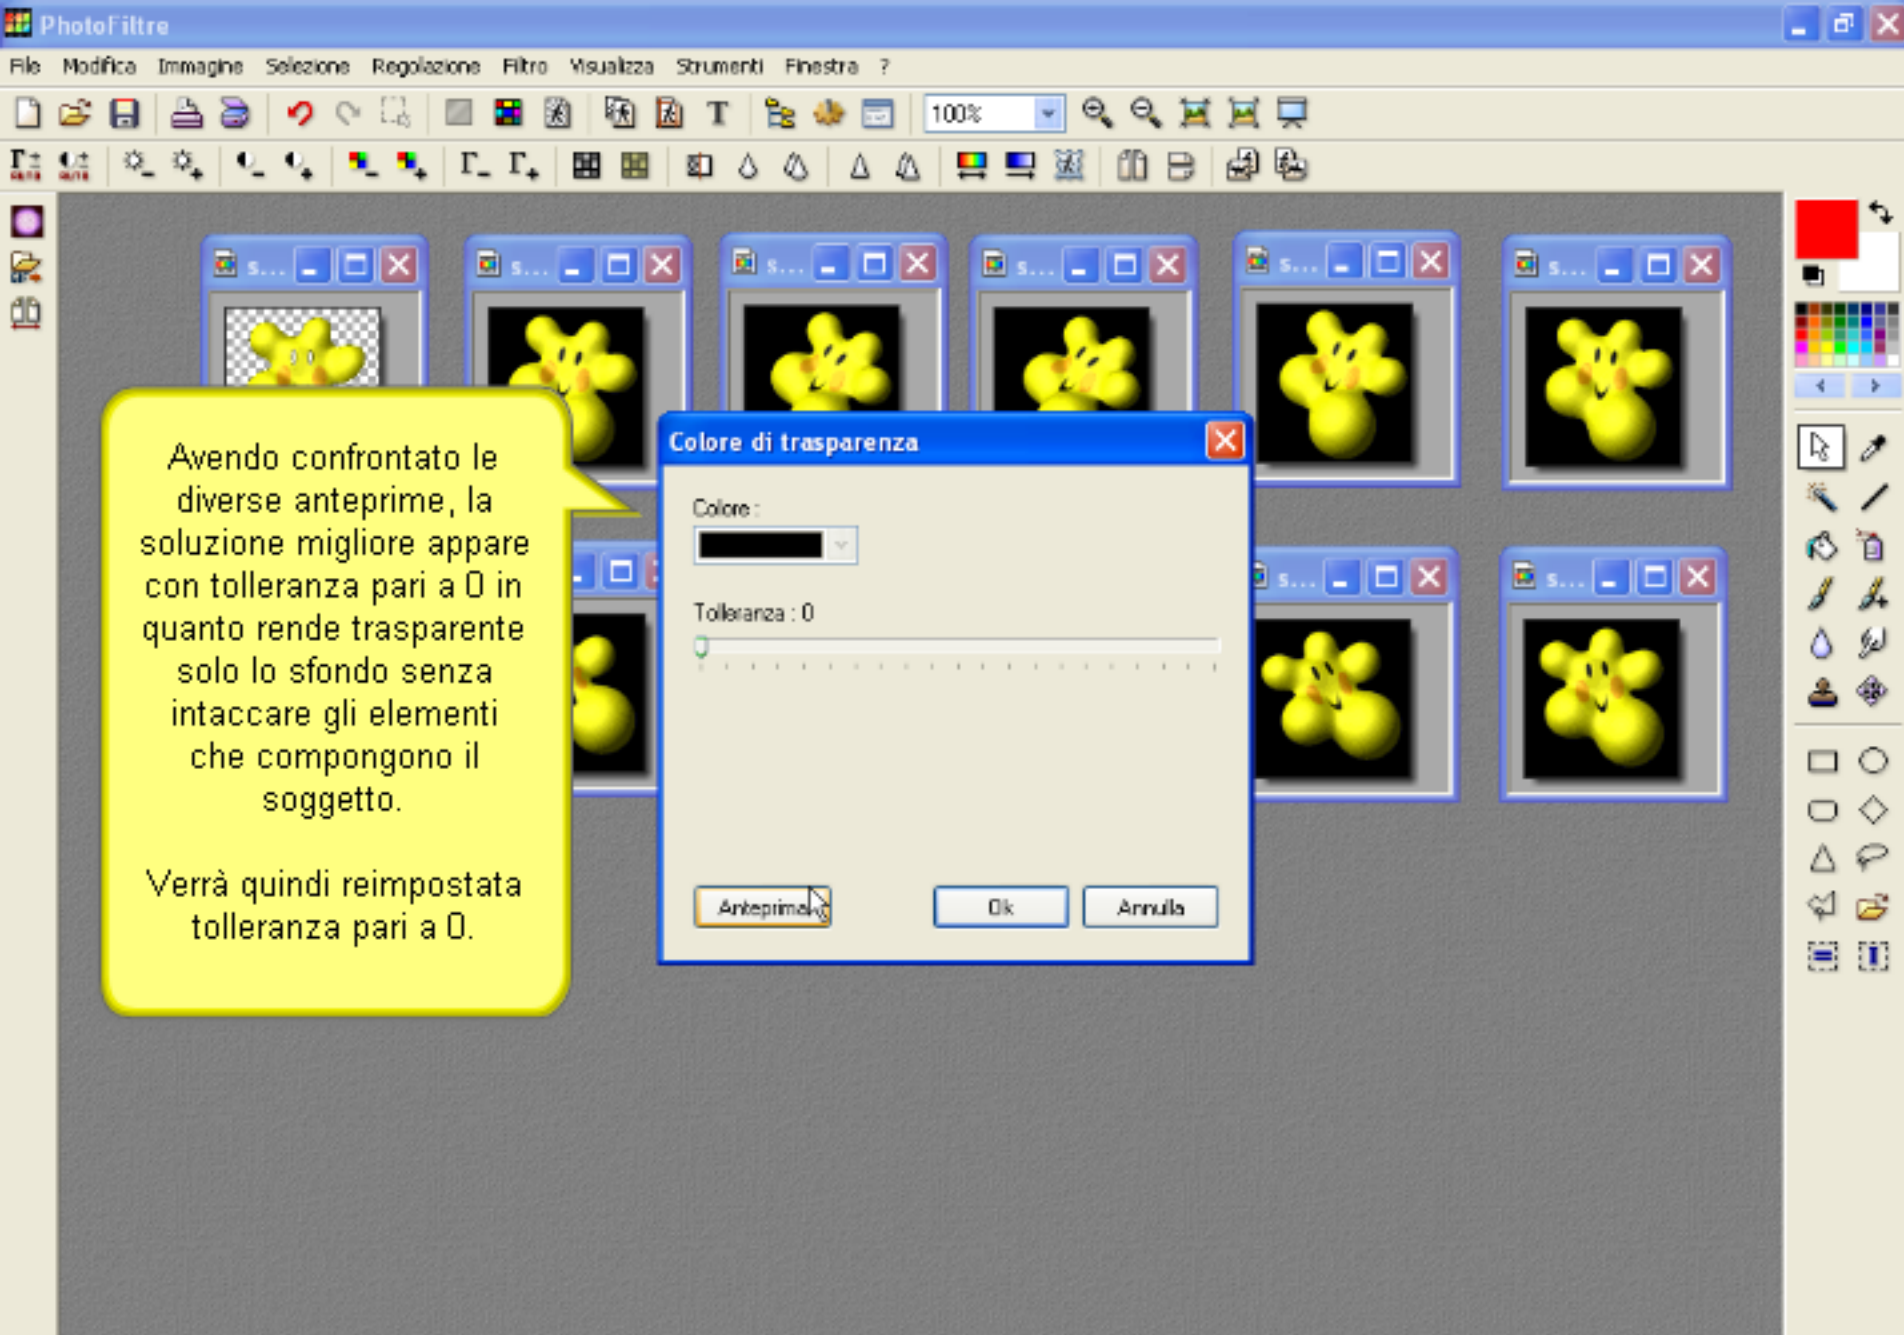

Avendo confrontato le diverse anteprime, la soluzione migliore appare con tolleranza pari a 0 in quanto rende trasparente solo lo sfondo senza intaccare gli elementi che compongono il soggetto.

Verrà quindi reimpostata tolleranza pari a 0.

Annulla

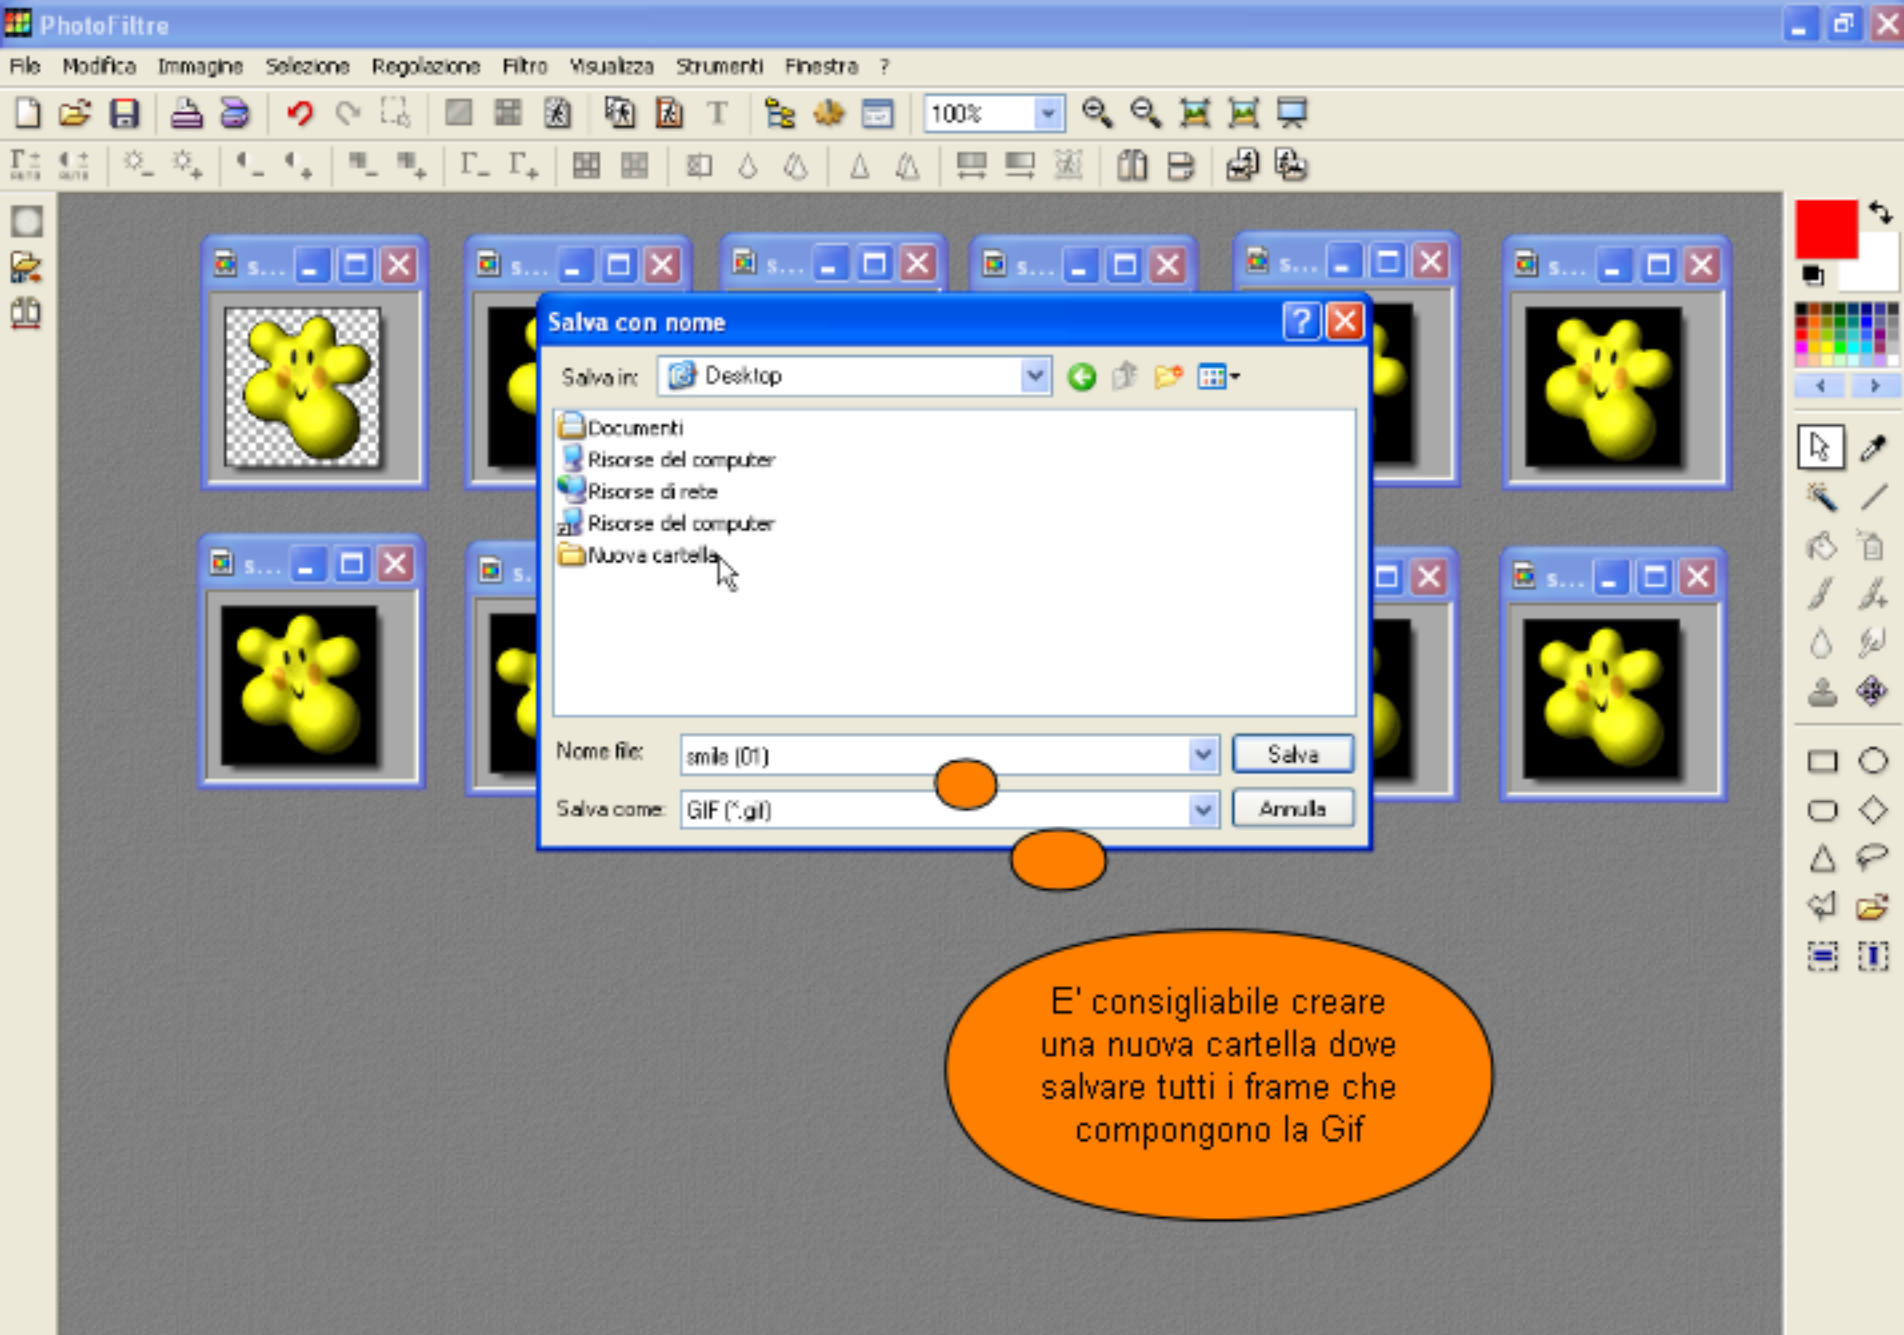

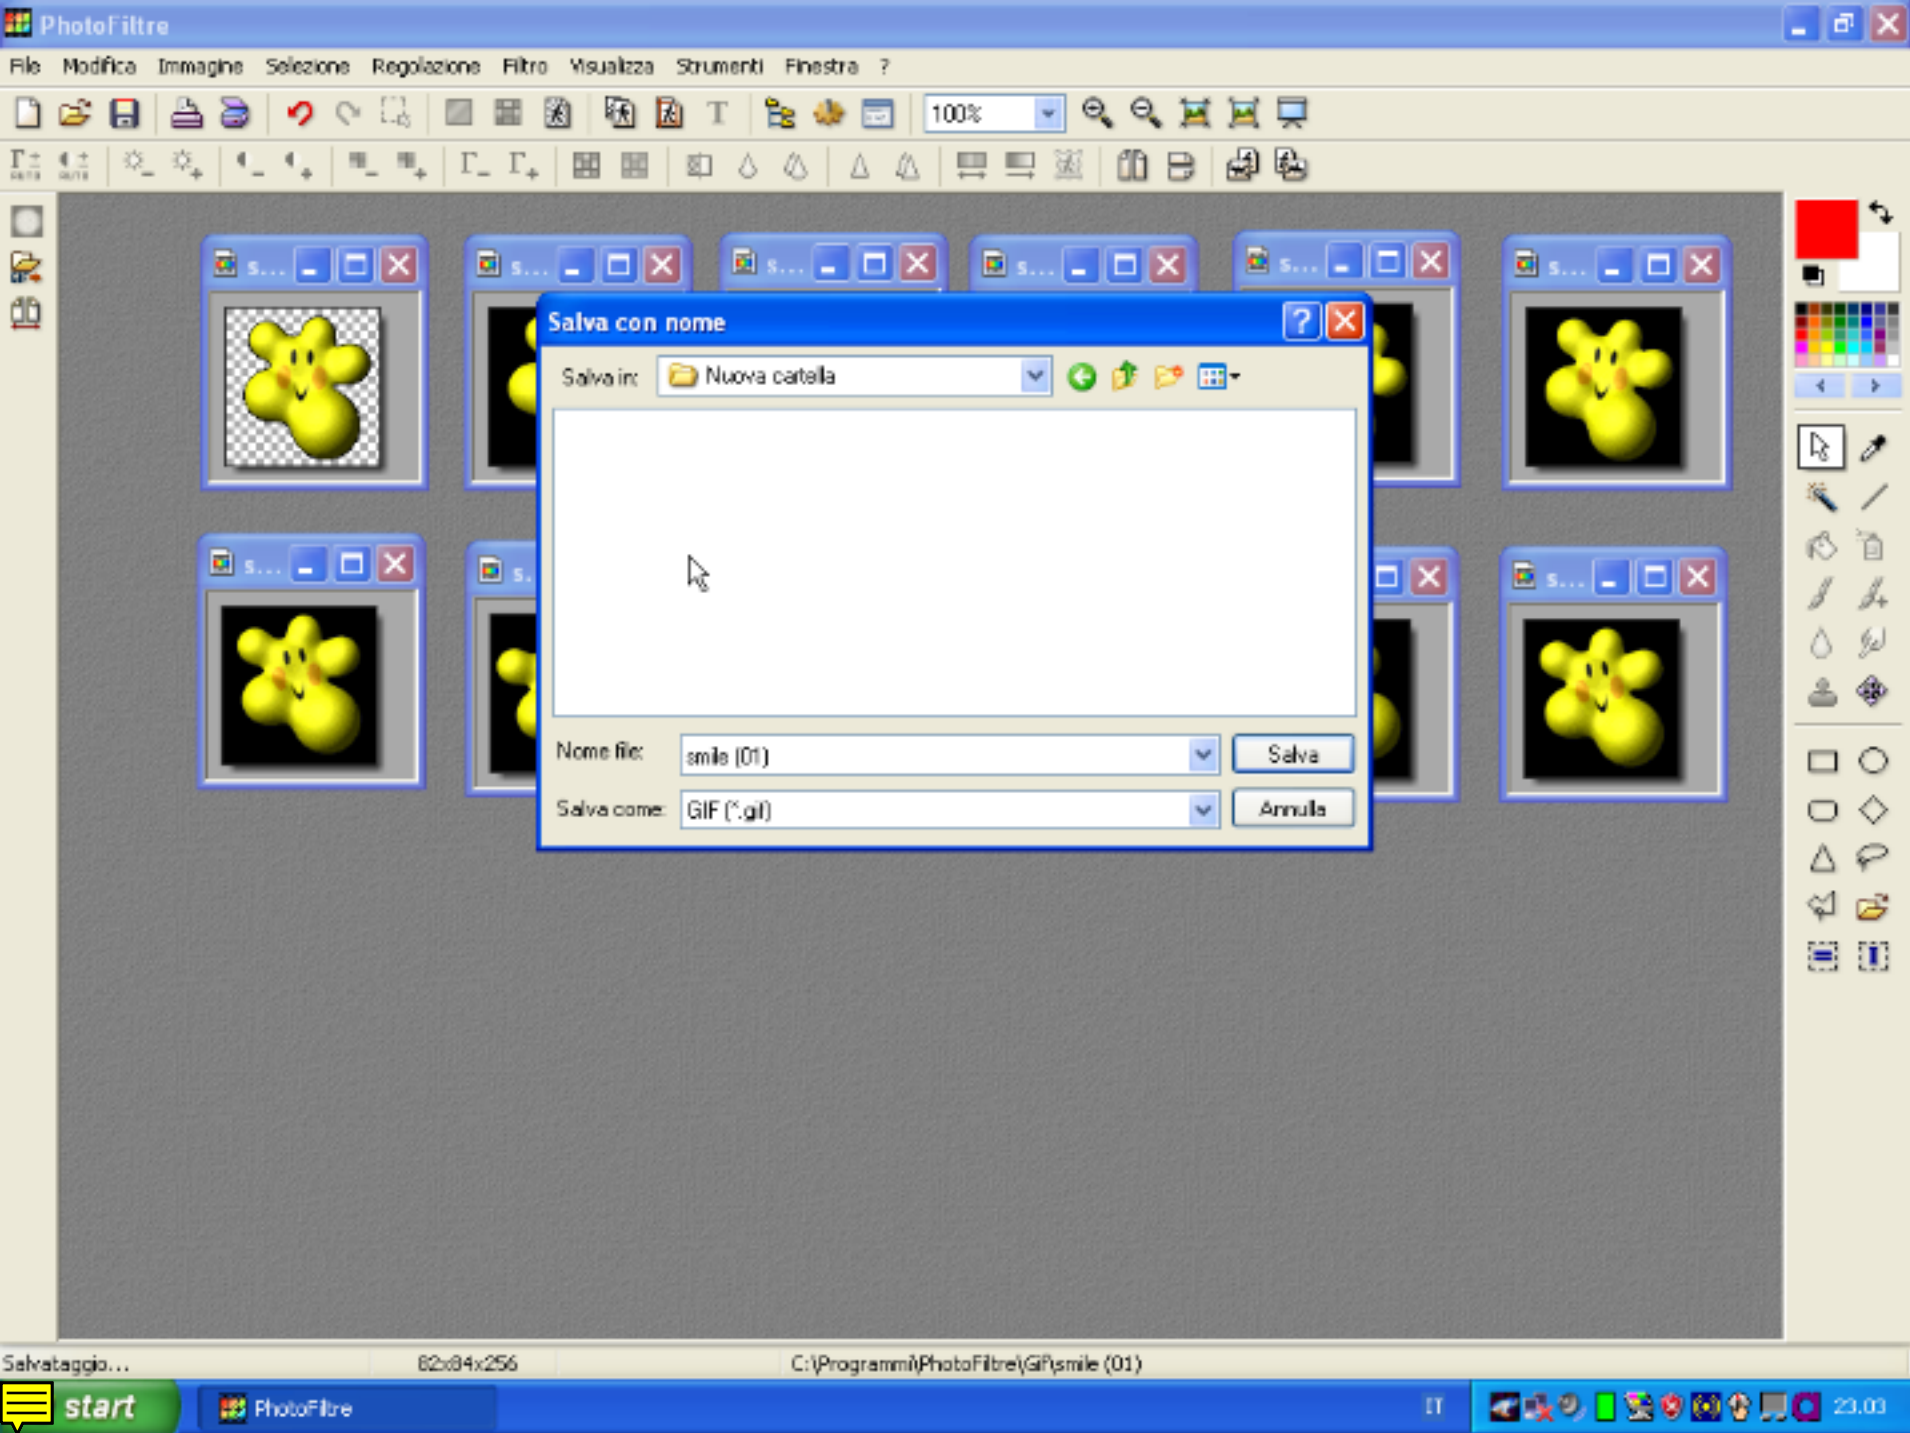

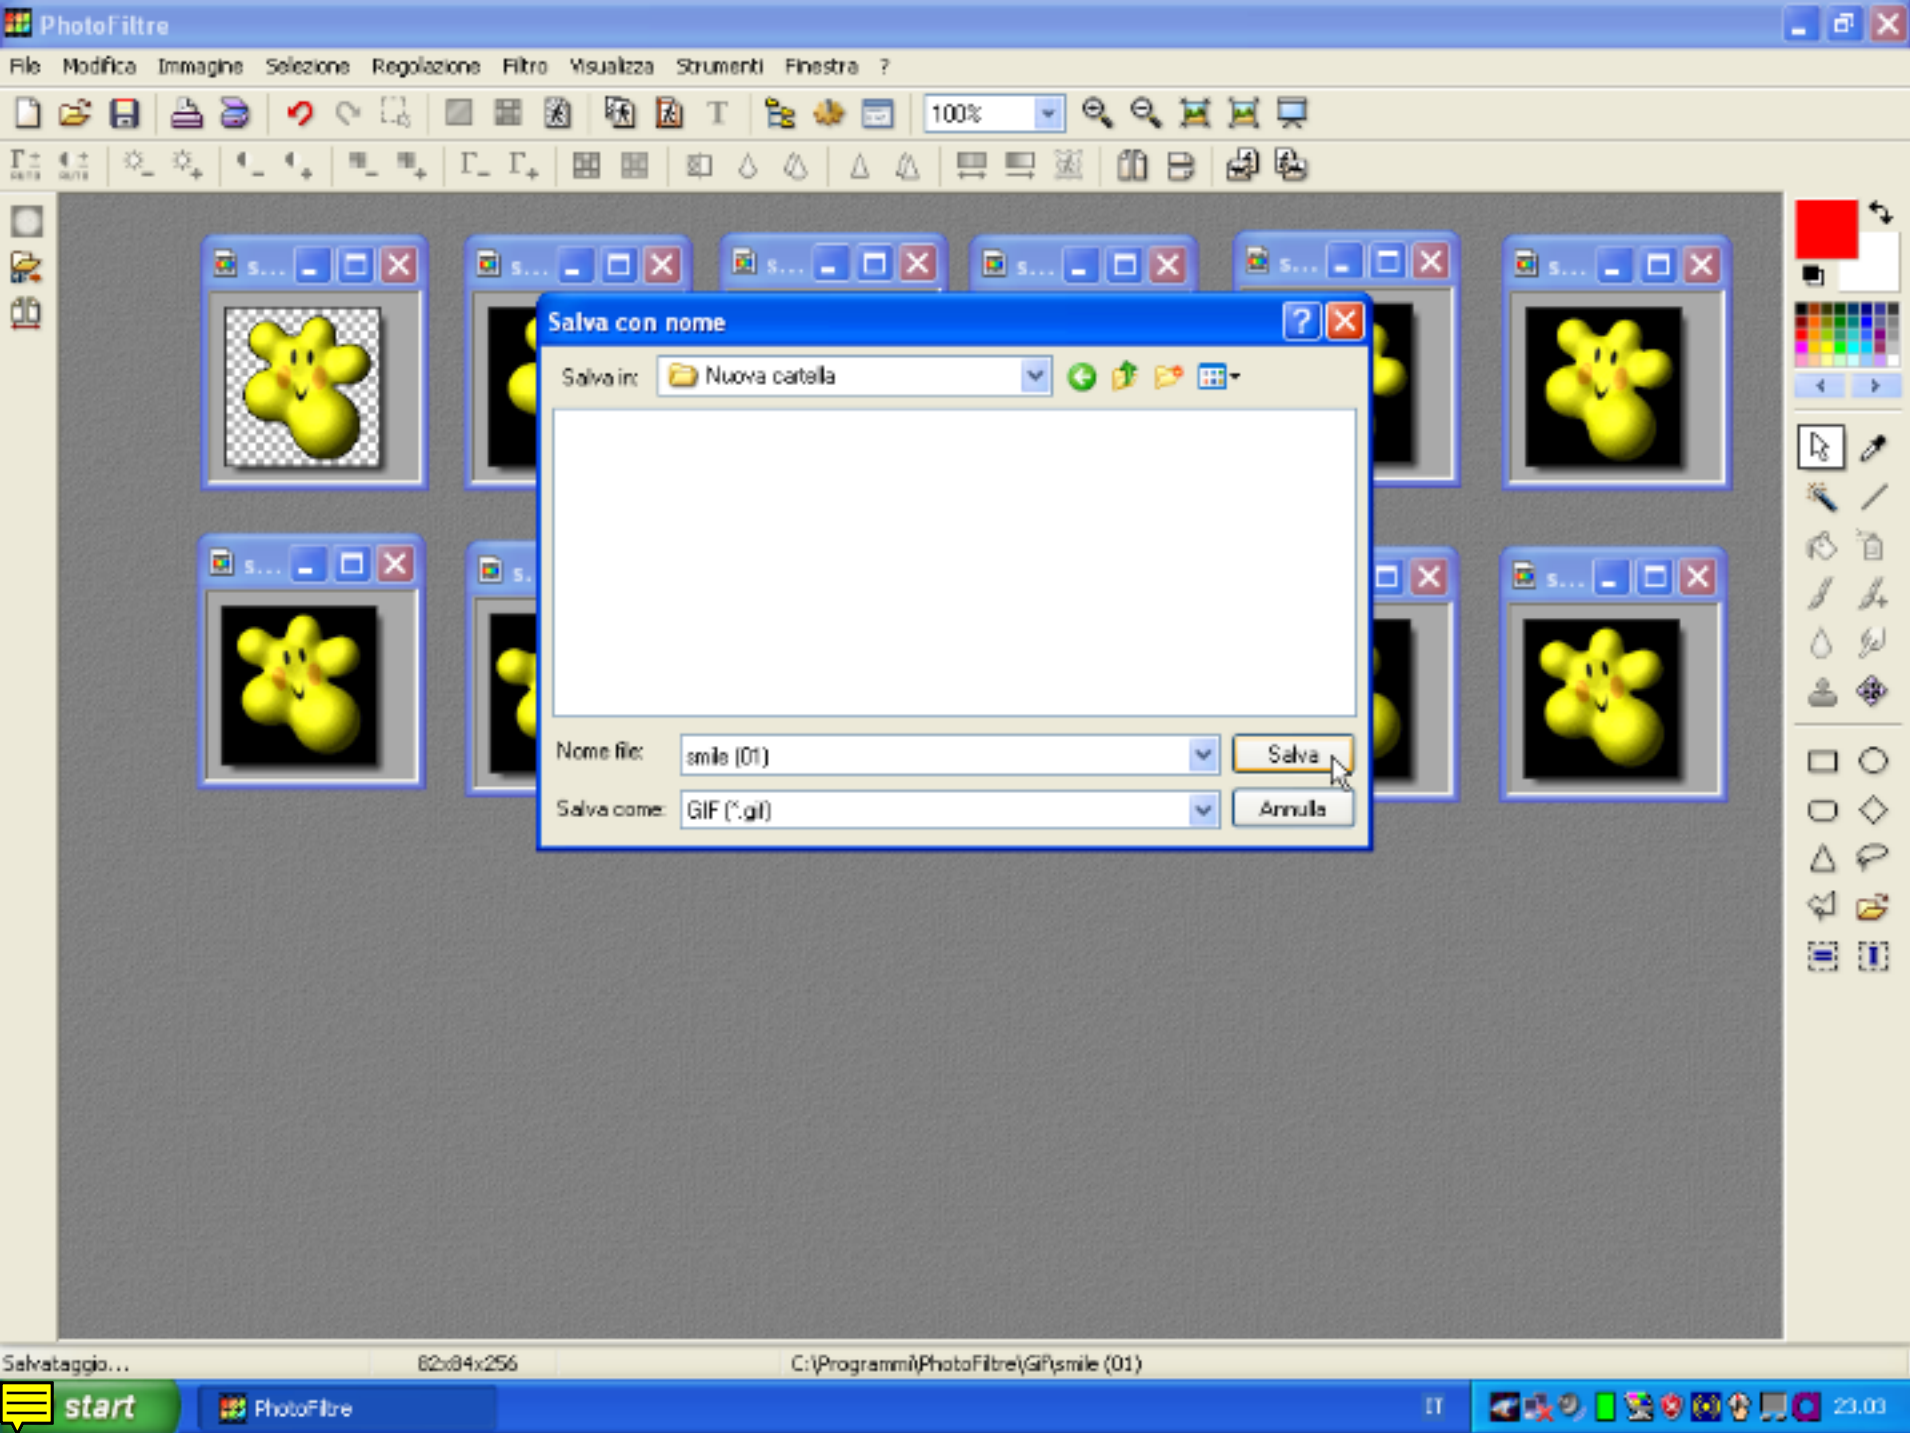

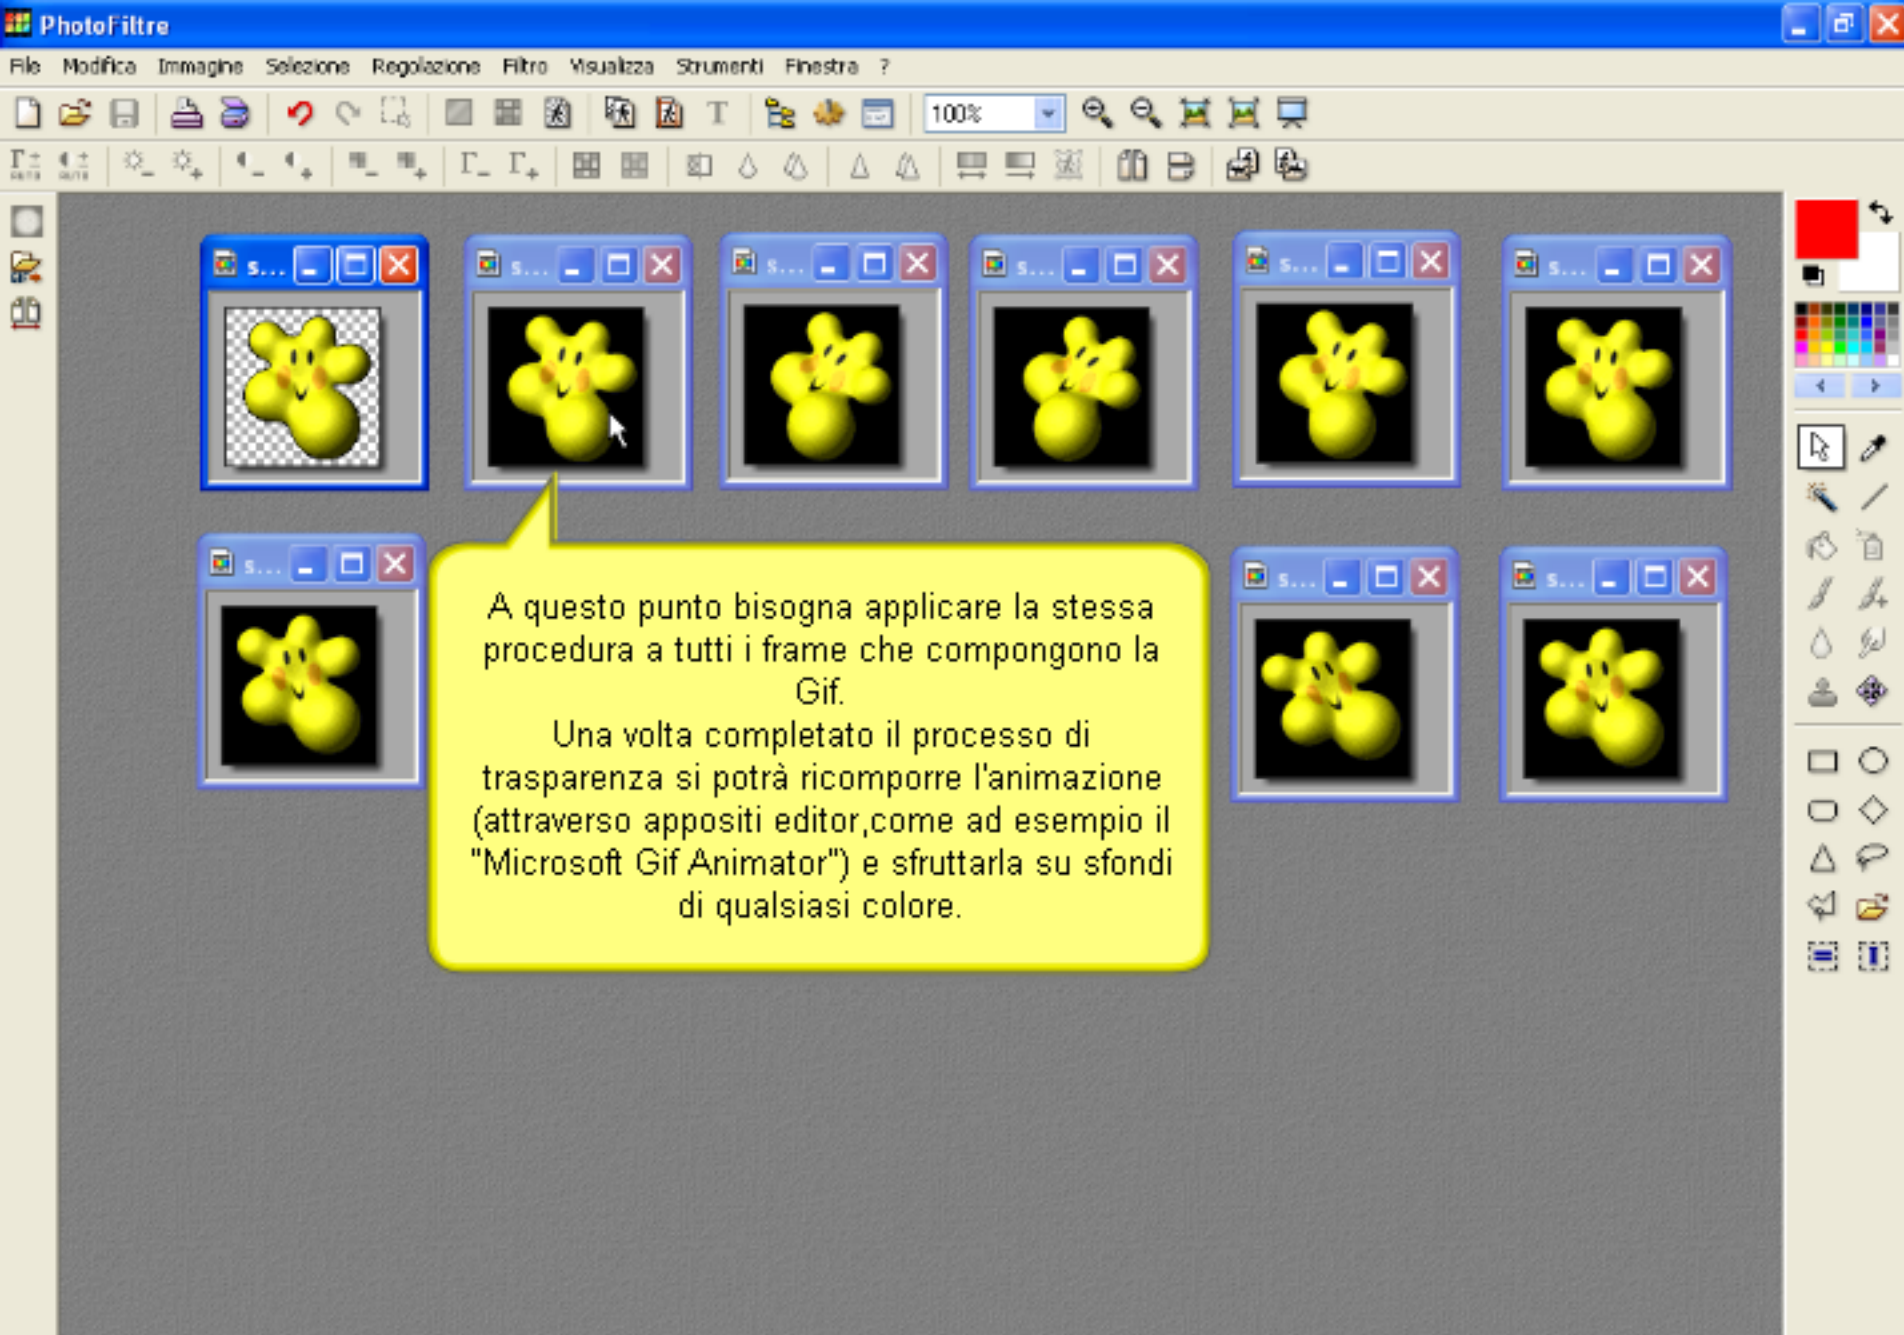

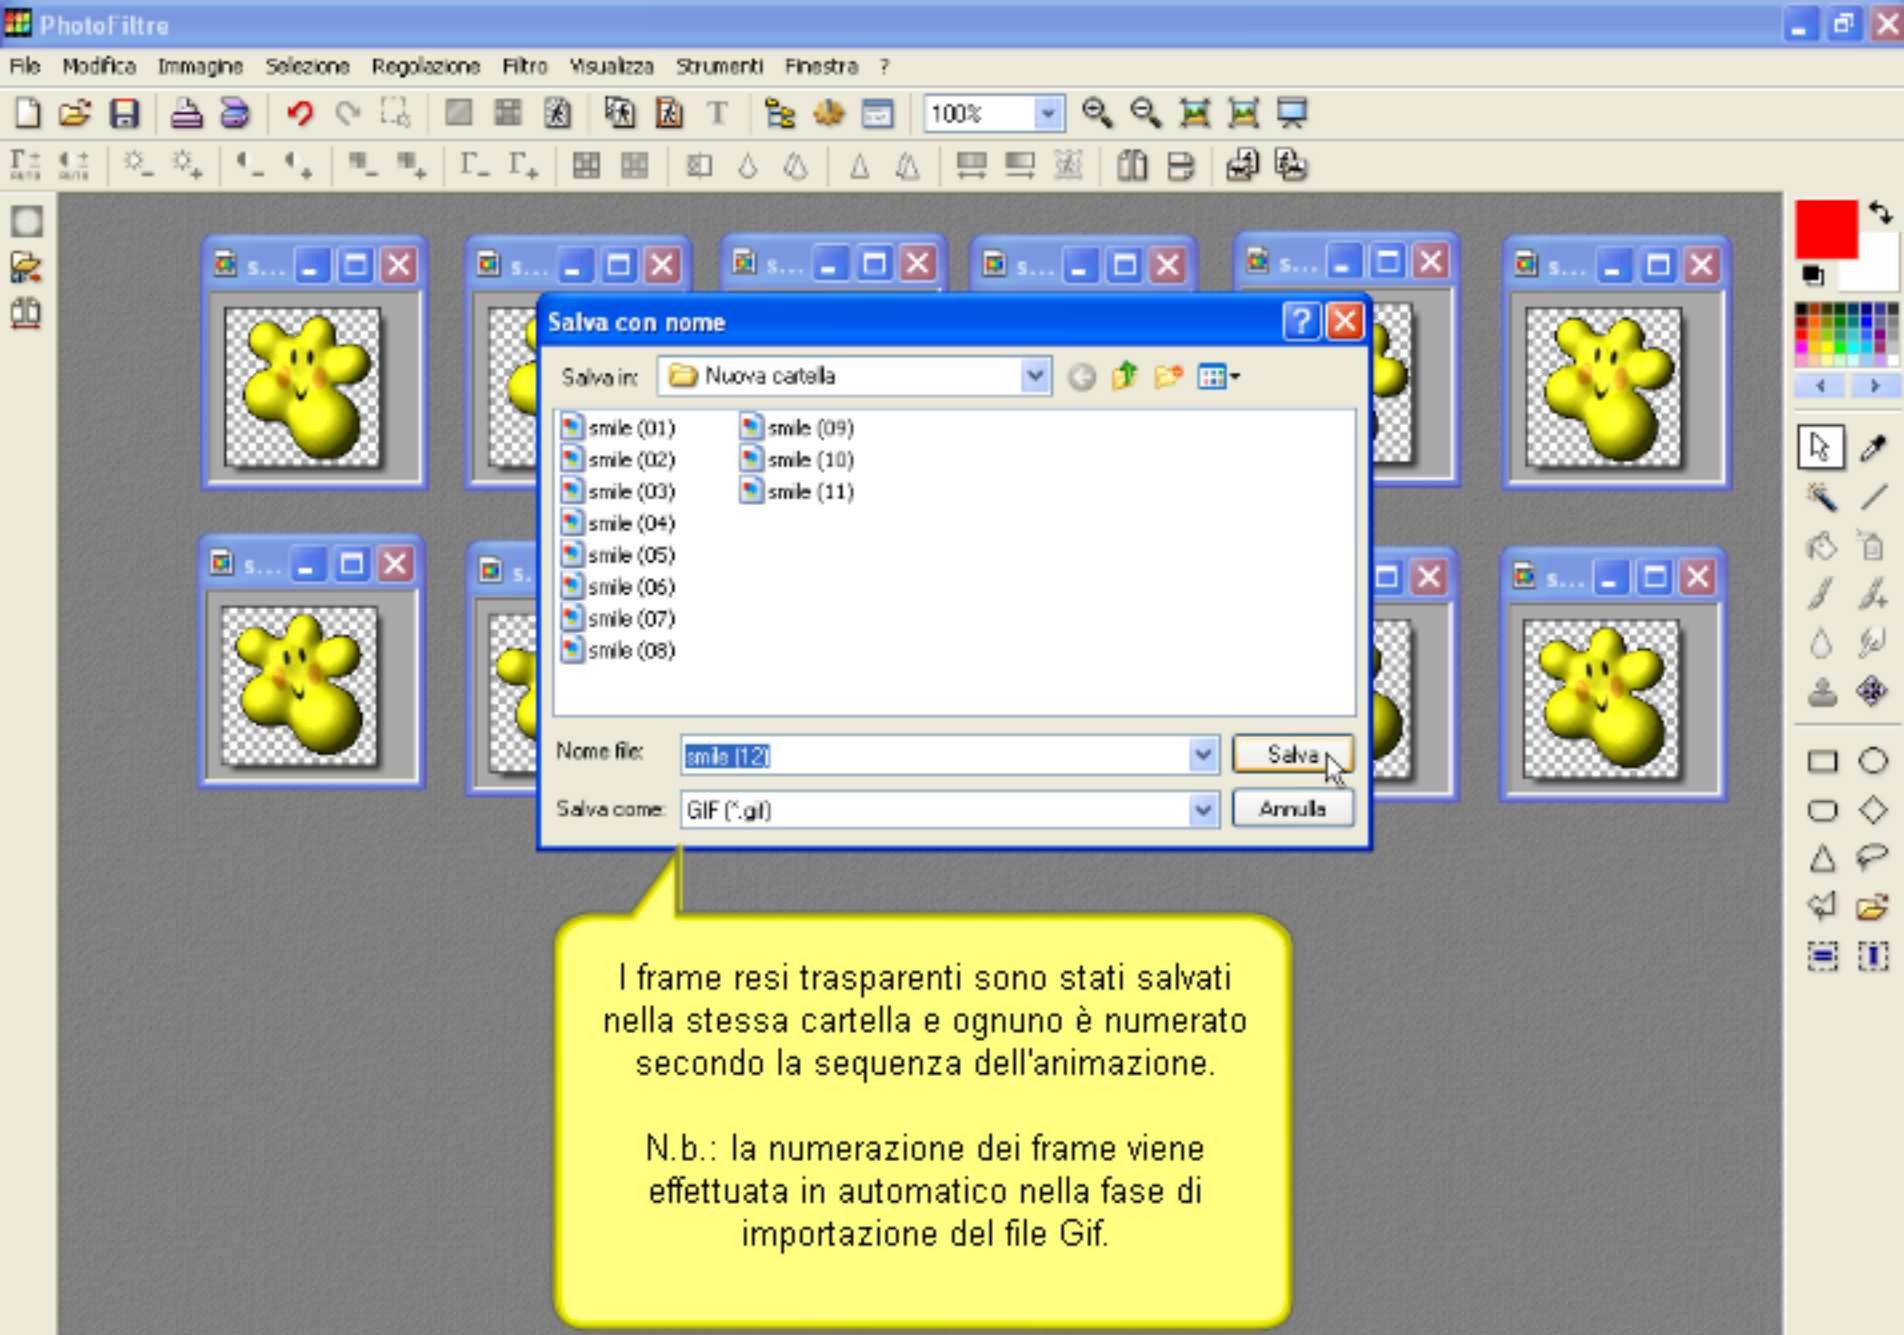

E' consigliabile creare una nuova cartella dove salvare tutti i frame che compongono la Gif

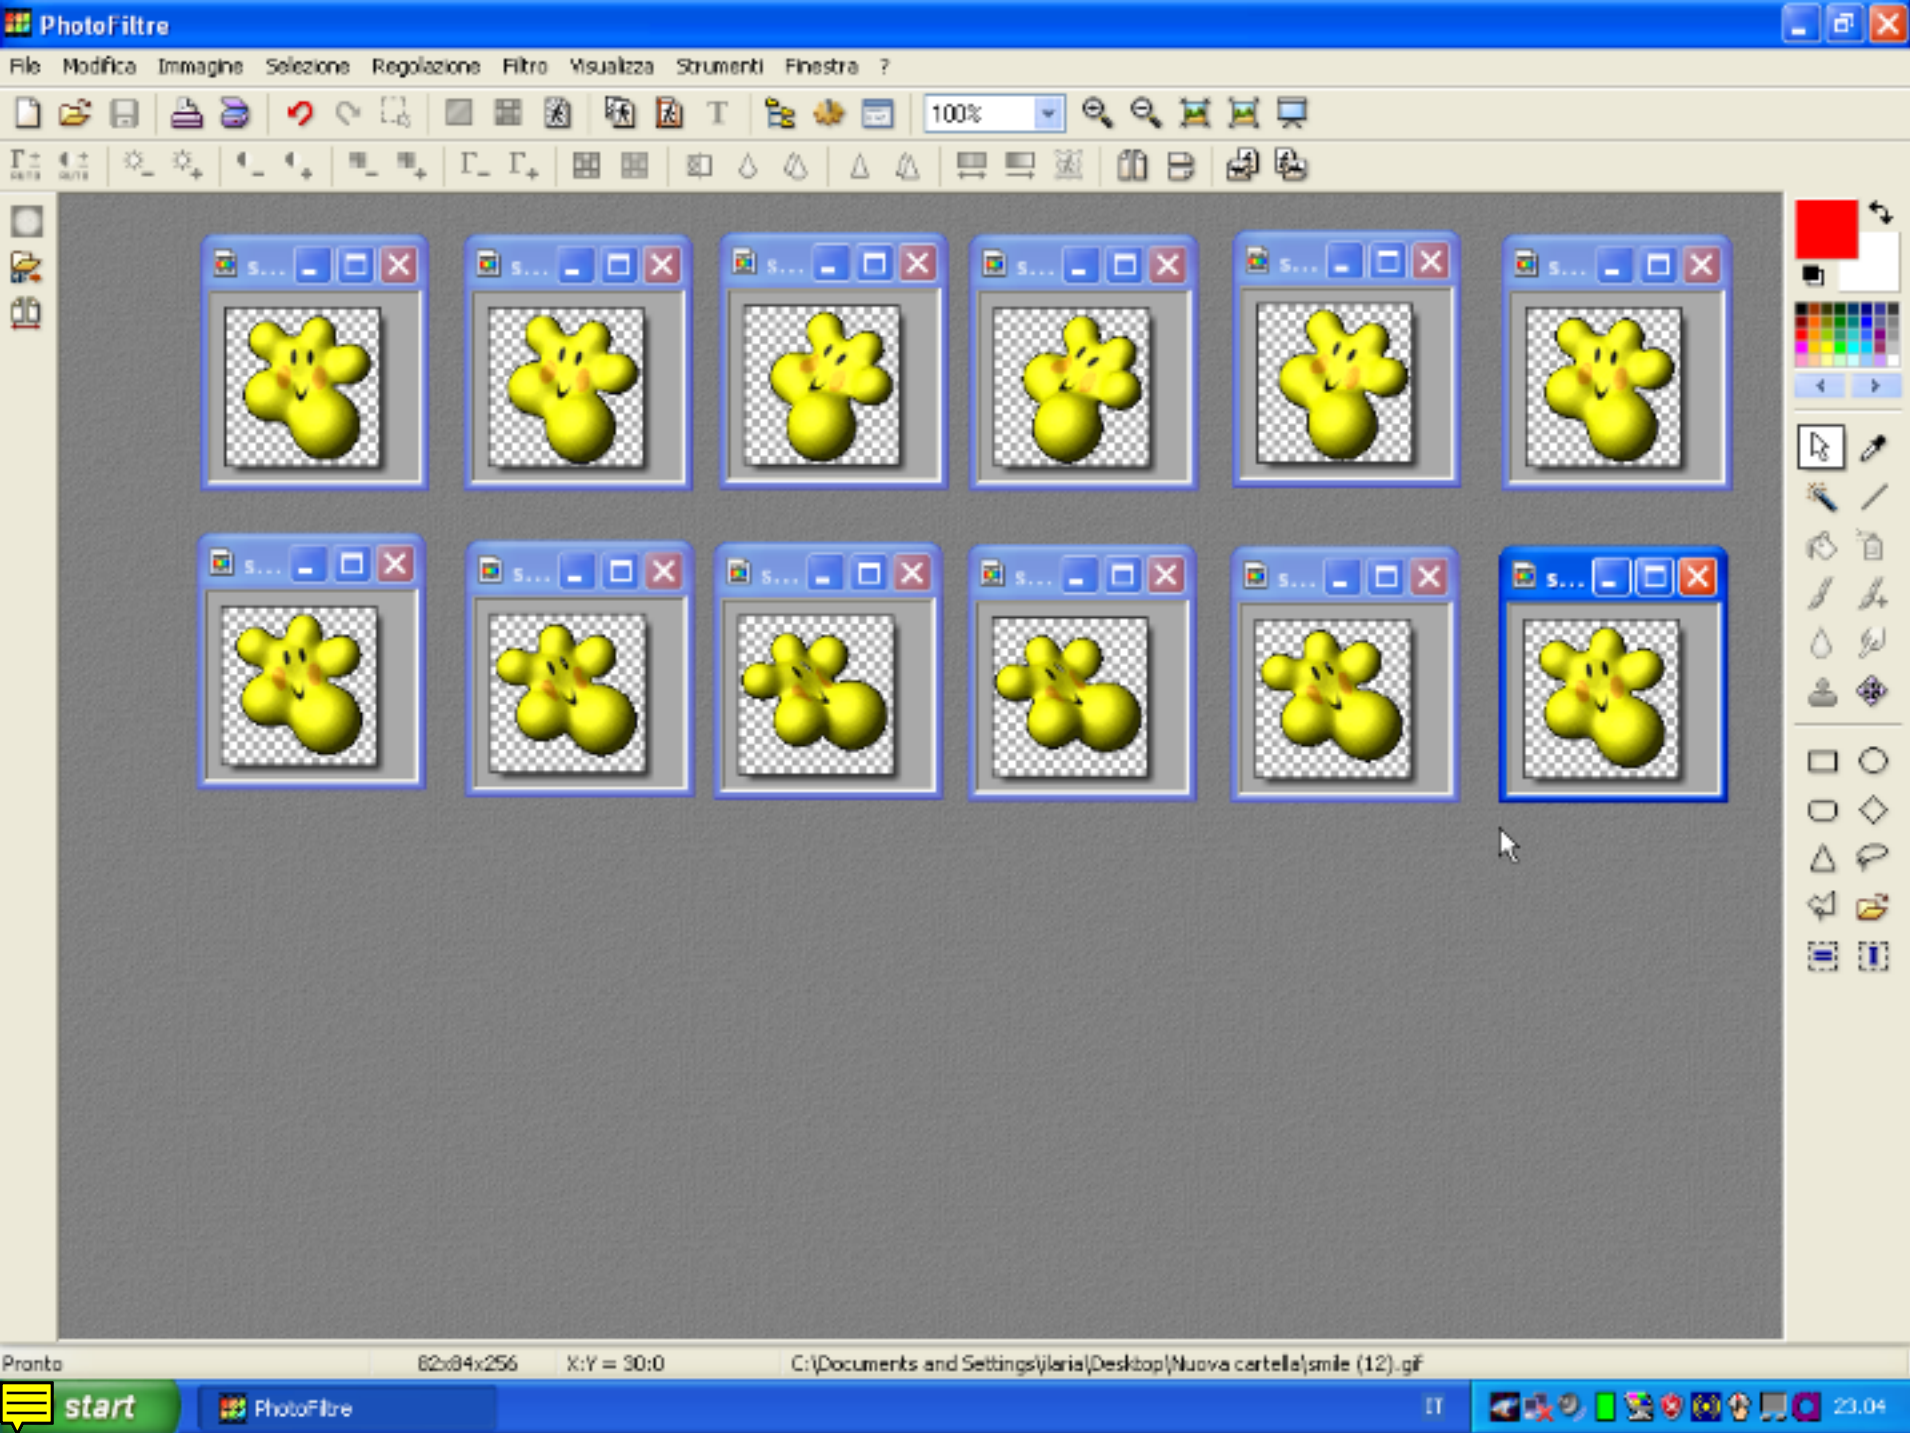

I frame resi trasparenti sono stati salvati nella stessa cartella e ognuno è numerato secondo la sequenza dell'animazione.

N.b.: la numerazione dei frame viene effettuata in automatico nella fase di importazione del file Gif.

Infine, volendo valutare in prima analisi il risultato ottenuto si può aprire una nuova immagine con sfondo colorato e incollarvi sopra uno dei frame con sfondo trasparente...
